The Queensland Police Service web address is “www.police.qld.gov.au”.

Past and current copies of the Queensland Police Service’s Annual Statistical Review and Annual Report are available at the above web address. Whilst the Annual Statistical Review provides a wealth of information relating to the activities of the Queensland Police Service, the Annual Report provides a range of performance management information, successful initiatives and includes the Service’s financial statements.

Commissioner's Foreword

The *Queensland Police Service Annual Statistical Review 2010/11* provides a comprehensive record of crime statistics for Queensland. It includes information on levels of reported and cleared crime, traffic related matters and police personnel. The Statistical Review is a key component of the Service's overall performance management and accountability framework.

The Statistical Review also has a strategic role. In order to help ensure the safety and security of Queenslanders, the Service continues to formulate relevant and innovative policing strategies. The information contained in the Statistical Review supports evidence based, strategic decision making.

This year's Statistical Review continues the encouraging safety and security outcomes of recent years. It was pleasing to see a further 3% decrease in the State's overall crime rate when compared with the previous year.

Over the eleven year period 2000/01 to 2010/11, the State has recorded decreases in the rate of offences against the person (25%) and offences against property (46%) which has resulted in a decrease of 30% in the overall crime rate.

Key outcomes for 2010/11 include:

- 6% decrease in the rate of total offences against the person;
- 4% increase in the rate of total offences against property; and
- 11% decrease in the rate of total other offences.

All of the six categories in offences against the person recorded decreases, homicide (murder) 11%, other homicide 33%, assault 6%, sexual offences 9%, robbery 3% and other offences against the person 4%.

The following categories of offences against property reported decreases, unlawful entry 3%, arson 12%, fraud 12% and handling stolen goods 6%. The categories of other property damage, unlawful use of motor vehicle and other theft (excl. unlawful entry) all reported increases in the rate per 100,000 persons which resulted in an overall increase in offences against property.

In the other offences group breach domestic violence orders was the only category to report an increase (4%). The remaining categories all reported decreases, drug offences 2%, prostitution offences 32%, liquor (excluding drunkenness) 26%, trespassing and vagrancy 11%, weapons act offences 3%, good order offences 11%, stock related offences 9%, traffic and related offences 18%, and miscellaneous offences 22%. These offences (with the exception of domestic violence) are generally detected by police rather than reported by the public.

Bob Atkinson APM, Commissioner of Police

During 2010/11 natural disasters affected much of the State. Officers of all ranks and functions (including many QPS staff who are not sworn officers) in every region and command worked and assisted with the flood and disaster response.

The Queensland Police Service is committed to working collaboratively with other agencies and the community to ensure the continued safety and security of all Queenslanders into the future.

The positive results reported in this year's Statistical Review reflect the professionalism and commitment of all members of the Service, for which I am very grateful.

Bob Atkinson APM
Commissioner

Queensland Crime

The following tables provide statistics for Queensland for the 2009/10 and 2010/11 financial years, for reported and cleared offences against the person and offences against property and reported other offences.

Reported offence data are presented as both numbers and rates (offences reported per 100,000 persons), together with a percentage change indicator to provide the reader with a clear and balanced picture of the level of crime in Queensland.

Cleared offences are displayed as 'Reported and Cleared in Period' and 'Cleared in Period, Reported Previously'. The 'Percentage Cleared' figures refer only to those offences reported and cleared in the relevant financial year.

The 2009/10 statistics included in these tables (and throughout the Review) have been revised from those published in last year's Annual Statistical Review and, as such, figures presented last year may differ slightly from those presented in this edition.

Crime 2010/11

Offences Against the Person

The broad offence group of offences against the person is comprised of a number of different offence categories, with the volume of offences reported differing significantly across categories. For example, assaults account for 65% of offences against the person (Figure 1) while homicide (murder) accounts for less than 1%. Thus, assault offences tend to dominate offences against the person, while homicide (murder) will have little effect on the overall total.

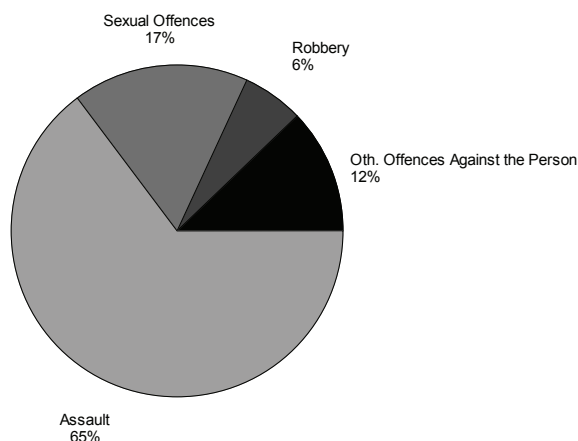

Figure 1: offences against the person (%) - 2010/11*-

Overall, the number of offences against the person decreased by 4% in Queensland between 2009/10 and 2010/11. A total of 30,156 offences were reported to police in 2010/11, 1,300 less than the revised figure from the previous financial year. Taking into account the growth of the Queensland population, the rate of offences against the person decreased by 6% from 697 to 655 offences per 100,000 persons.

Of the 30,156 offences against the person reported to police during the 2010/11 financial year, 22,146 (73%) were cleared by the end of June 2011 compared with 76% cleared the previous year. An additional 3,464 offences reported in previous time periods were also cleared during 2010/11.

As with previous years, North Queensland (Far Northern and Northern Regions) recorded the highest rates of offences against the person, while Metropolitan South Region recorded the

lowest. South Eastern Region recorded the largest decrease of 11% in the period under review.

Fifteen to nineteen year old females were most likely to have been victims of offences against the person in 2010/11 followed by ten to fourteen year old females. In the younger age groups (zero to nineteen years), females were more likely than males to be victims of offences against the person. From the age of twenty years, males were more likely than females to be victims. For 58% of victims of solved offences, the offenders were known to them.

More males were proceeded against for offences against the person compared with females. While only 22% of offenders were female, 31% were male aged fifteen to twenty four years. The likelihood of offending peaked in the fifteen to nineteen year age group for both males and females and decreased with increasing age.

Of those who were found to have committed offences against the person, approximately 56% were proceeded against through an arrest with a further 25% proceeded against through the service of a notice to appear.

Homicide (Murder)

Homicide (murder) is a small volume offence category and, as such, is subject to sizeable fluctuations from one year to the next and from region to region.

The number of homicide (murder) offences decreased by 5 offences in Queensland for 2010/11 compared with 2009/10. Of the 50 homicides reported to police in 2010/11, 41 (82%) were cleared in the same period. An additional 3 offences were cleared from previous periods.

North Coast Region recorded the highest increase and Northern and Southern Region recorded the largest decrease of homicide (murder) offences within the State. The highest rate was recorded by Far Northern and Northern Regions and the lowest rate was recorded by Metropolitan South Region.

This year, 54% of the victims of homicide (murder) were female. The highest rate of homicide (murder) offences occurred for females in the thirty five to thirty nine year age group which

recorded a rate of 4 offences per 100,000 persons. In 69% of solved cases, the offender was known to the victim.

Males were significantly more likely than females to commit homicide (murder) (88%). In 2010/11, males aged twenty five to twenty nine and thirty five to thirty nine years were most likely to offend. In 91% of cases, the offender was proceeded against through an arrest.

Other Homicide

As with homicide (murder), other homicide is a low-volume offence category. Therefore, it is subject to marked fluctuations from year to year and from area to area. The rate of other homicide offences decreased by 32% during 2010/11, as a result of decreases in attempted murder (13 offences), conspiracy to murder (2 offences), manslaughter (6 offences), and driving causing death (10 offences).

Factoring in the increase of the Queensland estimated resident population, other homicide offences decreased by 33% to a rate of 1 offence per 100,000 persons. Of the 66 offences reported to police in 2010/11, 56 (85%) were cleared in the same period. Additionally, 11 offences were cleared from previous periods.

Central and Southern Regions were the only regions to record an increase in the rate of other homicide offences. Central and Southern Regions recorded the highest rate per 100,000 persons for other homicide in the State.

Just over two-thirds (70%) of the victims of other homicide were male with the highest rate recorded in the forty to forty four years age group. For every age group, except for those aged zero to four and twenty five to twenty nine years, males were more likely to be victims than females. In 62% of the solved cases, the offender was known to the victim.

Males were significantly more likely than females to commit other homicide offences (84% of offenders were male). In 2010/11, males aged twenty to twenty four and thirty five to thirty nine years were most likely to offend. Seventy four percent of offenders were proceeded against through an arrest, while 19% were issued with a notice to appear.

Assault

Assaults comprise approximately 65% of total offences against the person. As such, they tend

to dominate this broad offence group. The number of assaults in Queensland decreased by 4% from 2009/10 to 2010/11. This equates to a rate of 423 offences per 100,000 persons in 2010/11.

The overall decrease in the rate of assaults is attributable to decreases in the rate of all assault categories. Of the 19,469 assaults reported to police in 2010/11, 15,008 (77%) were cleared in the same period with a further 2,093 offences cleared from previous periods.

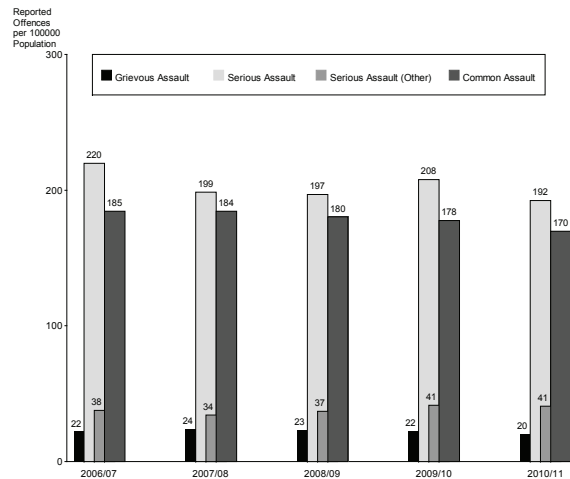

Figure 2: Reported assaults, Queensland, 2006/07 to 2010/11

Higher rates of serious assault were seen in 2006/07 (Figure 2). A possible explanation for this is a broadening of the definition of serious assault to include, for example, assault of a person aged sixty years or more, assault on physically impaired people and assaulting a police officer in the execution of duty.

The seasonal influence on the occurrence of assaults can be seen clearly in monthly crime trends (see page 19). These offences peak around December of each year and fall to a low around July.

As with previous years, Far Northern and Northern Regions recorded the highest rates of assault in the State, despite Far Northern Region recording the largest decrease of 11%. Metropolitan South Region recorded the lowest rate.

For all age groups males were more likely than females to be victims of assault. Males aged fifteen to twenty-nine years were most likely to be victims. From age twenty, the rate of victimisation for males decreased steadily. The age of victimisation for females peaked at the fifteen to nineteen year age cohort and then decreased with increasing age. For 55% of victims of solved offences, the offender was known to them.

Across all age groups, males were also more likely to commit offences of assault (74% of offenders were male). Males aged fifteen to nineteen years were most likely to offend. Of those people proceeded against, 53% were arrested and 30% were served with a notice to appear.

Sexual Offences

Sexual offences are particularly affected by an unpredictable variability in the reported rates due to the fact that offences occurring decades ago are still being reported to police. As offences are counted against the period in which they are reported, rather than when they occurred, increases in crime statistics do not always equate to an increase in victimisation.

The number of sexual offences reported to police in 2010/11 decreased by 7% from the number reported in the previous financial year. The number reported equates to a rate of 112 offences reported per 100,000 persons. The decrease in the rate is attributable to a decrease of 11% in other sexual offences. Of those offences reported in 2010/11, 3,854 (75%) were cleared, with an additional 884 offences cleared from previous periods.

Seven of the eight regions recorded decreases in sexual offences with South Eastern Region recording the largest decrease of 26%. Metropolitan South Region recorded the lowest rate and the lowest rate. North Coast Region recorded the only increase of 6%.

The Sexual Offence category is one of two offence categories for which there are more female victims than male (83% of victims were female). Females aged between ten and nineteen years were most likely to be victims of sexual offences. Females in this age group comprise 48% of total victims. For 73% of victims of solved offences, the offender was known to them. In 28% of solved cases, the offender was a family member.

In total, 87 or 4% of females committed sexual offences in 2010/11. Thus, 96% of offenders were male. The age distribution of male offenders is unique for this offence type in that the distribution is almost uniform across all age groups with the exception of fifteen to nineteen year olds. The number of offenders is only slightly lower in the older age groups, with males aged fifty years and over representing 16% of all sexual offenders. For those proceeded against, 60% were arrested and 10% were served with a notice to appear.

Robbery

A decrease of 9% in the number of unarmed robberies reported to police in 2010/11 led to an overall decrease in the number of robbery offences reported in the year under review. A total of 1,787 offences were reported to police, which equates to a rate of 39 offences per 100,000 persons. Of these, 964 (54%) were cleared in the period in which they were reported, with an additional 127 offences cleared from previous periods.

The rates of robbery increased steadily since the early 1980's, peaking in 1998/99. Since 1998/99 the rate of robbery offences has been showing a decreasing trend. The rate of reported unarmed robbery recorded an 11% decrease while the rate of armed robbery recorded an increase of 7% (Figure 3).

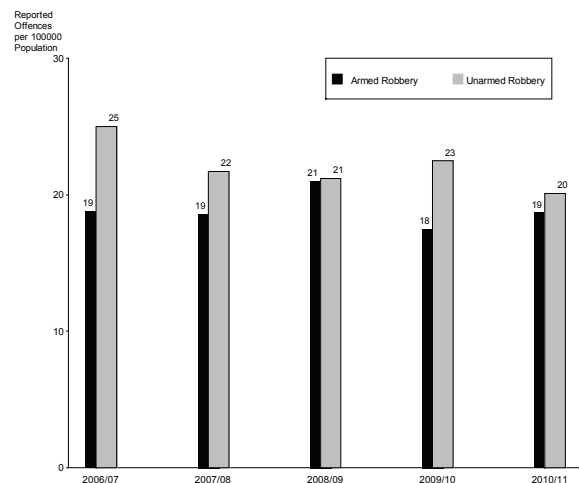

Figure 3: Reported robbery offences, Queensland, 2006/07 to 2010/11

Robbery offences tend to occur more frequently in the south-east corner of the State as was the case in 2010/11. Northern Region recorded the largest increase of 19% and South Eastern Region recorded the highest rate of robbery in the State. North Coast Region recorded the greatest decrease of 26% and the lowest rate in the State.

For every age group, males were more likely than females to be victims of robbery, with males aged fifteen to nineteen years most likely to be victims. Males were victim to robbery in 75% of all cases reported to police. For the majority of victims (81%) of solved robbery offences, the offender was unknown to them.

Males were significantly more likely than females to commit robbery offences (85% of offenders were male) and 58% of total offenders were aged between fifteen and twenty four years. Of those

proceeded against for robbery offences, 82% were arrested and 8% issued with a notice to appear.

Other Offences Against the Person

The category of other offences against the person includes offences such as kidnapping and abduction, deprivation of liberty, extortion, stalking and life endangering acts.

In 2010/11, other offences against the person decreased by 2% from 3,709 to 3,648 offences. When taking into account the growth of Queensland's population, the rate decreased by 4%. Of the 3,648 reported other offences against the person, 61% were cleared in the same period. In addition, 346 offences reported in previous periods were also cleared.

Females represented 54% of victims of total other offences against the person. People most likely to be victims of other offences against the person were female and aged between ten and nineteen years. For 62% of victims of solved offences, the offender was known to them.

Offences Against Property

The offence group of offences against property is comprised of a number of offence categories. As with offences against the person, the contribution of each category to the total differs significantly (Figure 4). In 2010/11, other theft (excl. unlawful entry) accounted for 46% of total offences against property and was the highest in volume of the property offence categories. Unlawful entry with Intent and other property damage each accounted for 20% of offences, with fraud accounting for 8%. As such, this broad offence group tends to be dominated by other theft (excl. unlawful entry) and unlawful entry with Intent, and other property damage, with offence categories such as arson having little effect.

The number of reported offences against property for the 2010/11 period increased by 6% when compared with the 2009/10 period. Factoring in the growth of the Queensland population, offences against property were reported at a rate of 4,682 offences per 100,000 persons in 2010/11, an increase of 4% from the previous year. Of all offences against property reported in 2010/11, 30% were cleared in the same period with a further 8,425 offences cleared from previous periods.

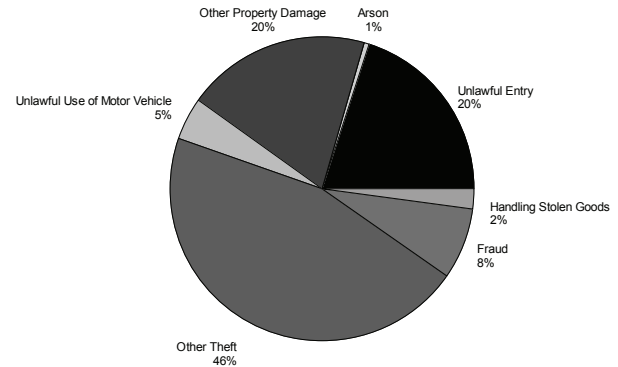

Figure 4: offences against property (%) - 2010/11¹

South Eastern Region recorded the highest rate of offences against property (5,668 offences per 100,000 persons) in the State, while Northern Region recorded the only decrease (6%). North Coast Region recorded the lowest rate (3,863 offences per 100,000 persons).

Overall, offences against property were more likely to be committed by males (75% of offenders were male). Over one quarter (28%) of offenders proceeded against for offences against property were male aged between fifteen and nineteen years. Of the total people proceeded against for offences against property, 38% were arrested, 44% were served with a notice to appear and 13% were cautioned.

Unlawful Entry

The number of unlawful entry offences decreased by 1%. This equates to a 3% decrease in the rate once the growth of the Queensland population is taken into account. Of the 43,024 offences reported to police in 2010/11, 19% were cleared in the same period with a further 1,491 offences cleared from previous periods.

The rate of unlawful entry of dwellings decreased by 2%, the rate of unlawful entry of shops decreased by 1% and unlawful entry of other premises decreased by 5%.

Six of the eight regions recorded decreases, the largest of which was North Coast Region (13%). Northern Region recorded the highest rate (1,284 offences per 100,000 persons) while North Coast Region recorded the lowest rate (683 offences per 100,000 persons). South Eastern Region recorded

¹ Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%.

the largest increase of 13% in the period under review.

Most unlawful entry offences were committed by young males. In fact, 91% of offenders were male and approximately 64% were male aged under twenty-five years. Of all offenders proceeded against for unlawful entry offences, 58% were arrested, 11% cautioned and 25% served with a notice to appear.

Arson

Arson is the lowest in volume of the offences against property categories and, as such, exerts very little influence on the offences against property total. The number of arson offences decreased by 11% from 2009/10 to 2010/11. The rate of offences decreased by 12%, from 30 to 27 offences per 100,000 persons. Of the 1,222 offences reported in 2010/11, 204 (17%) were cleared in the same period. An additional 18 offences were cleared from previous periods.

Six of the eight Regions recorded decreases with Southern Region recording the greatest decrease of 30%. Metropolitan North Region recorded the largest increase (9%), however also recorded the lowest rate (14 offences per 100,000 persons). Similar to previous years, South Eastern Region recorded the highest rate (54 offences per 100,000 persons).

This year, 87% of offenders were male with fifteen to nineteen year old males being the most likely to be proceeded against for arson. Approximately 72% of offenders were arrested, 9% cautioned and 8% served with a notice to appear.

Other Property Damage

The number of other property damage offences reported in 2010/11 increased by 5% when compared to the previous financial year. The rate of offences increased by 3%, from 893 to 917 offences per 100,000 persons. Of those offences reported to police in 2010/11, 12,573 (30%) were cleared during this period, with an additional 1,225 offences cleared from previous time periods.

Far Northern Region recorded the highest rate of 1,160 offences per 100,000 persons. The largest decrease was recorded by Central Region (7%). Metropolitan South Region recorded the lowest rate of other property damage offences (764 offences per 100,000 persons).

As with most offence types, fifteen to nineteen year old males were most likely to be proceeded against for other property damage offences. Only 12% of offenders were female and only 15% of offenders were aged thirty years or more. In total, 46% of offenders were served with a notice to appear, 34% were arrested, and 14% were cautioned.

Unlawful Use of Motor Vehicle

The rate of unlawful use of motor vehicle offences increased by 7% in 2010/11 which is equivalent to 823 more offences reported during 2010/11.

In 2010/11, 9,776 unlawful use of motor vehicle offences were reported to police. Of these, 3,080 (32%) were cleared during this period, with an additional 414 offences cleared from previous periods (note: for recovery rates see Glossary, page 169). In 2010/11, unlawful use of motor vehicle offences were reported at a rate of 212 offences for every 100,000 persons.

North Coast and Metropolitan North Regions were the only two areas to record decreases of 5% and 3% respectively. Far Northern Region recorded the highest increase of 17%, while North Coast Region recorded the lowest rate of 117 offences per 100,000 persons.

Males aged fifteen to nineteen years were most likely to commit unlawful use of motor vehicle offences (40% of male offenders were in this group). Forty-five percent of all offenders were aged fifteen to nineteen years. Approximately 65% of offenders were arrested and 24% were served with a notice to appear.

Other Theft (excluding Unlawful Entry)

The rate of other theft (excluding unlawful entry) offences increased by 12% from 2009/10 to 2010/11. This category is the highest in volume of the offences against property categories and thus exerts a significant influence on property crime as a total. In 2010/11, 98,255 other theft offences were reported to police, of which 27% were cleared during this period. A further 2,818 were cleared from previous periods.

Three of the four sub-categories of other theft offences recorded increases in the rate of offences reported: stealing from dwellings (21%), steal from vehicles (14%), and other stealing (18%). In 2010/11, 73% of shop stealing offences were cleared during the 2010/11 period, making this

the highest clearance rate within the other theft sub-categories.

The highest rate of other theft (excluding unlawful entry) occurred in South Eastern Region which also recorded the highest increase. The lowest rate was recorded in Southern Region and Northern Region recorded the only decrease in the year under review.

The proportion of female offenders for other theft was higher than for most other offence types at 36%, or just over one third. For both males and females, those in the fifteen to nineteen year age group were most likely to commit other theft offences. Arrest rates are low for this offence type at 28%, while 50% were served with a notice to appear, and 18% issued cautions. Of the 18% of offender's issues with cautions, 99% were juveniles (aged between ten and sixteen years).

Fraud

Queensland recorded a decrease in the number of offences per 100,000 persons in most sub-categories of fraud offences during the current period. Decreases were reported in fraud by cheque offences (26%), fraud by credit card offences (15%), identity fraud offences (28%), and other fraud offences (15%). This resulted in an overall decrease of 12% in the rate of total fraud offences. Fraud by computer was the only category to record an increase (19%) in 2010/11.

Of the 16,399 offences reported in 2010/11, 11,146 (68%) were cleared in the same period with a further 2,250 offences cleared from previous periods.

Central Region recorded the highest rate of fraud offences with North Coast Region recording the highest increase. Northern Region recorded the largest decrease of 34%.

Historically, fraud was unique in that the age of those proceeded against tended to be older when compared with other offence types, though this trend appears to have shifted over recent years. A relatively higher proportion of females commit fraud offences compared with other offence types. Approximately 36% of offenders were female. Males aged twenty five to twenty nine years and females aged fifteen to nineteen years were most likely to commit fraud offences. Thirty four percent of offenders were arrested, while 58% were issued with a notice to appear.

Handling Stolen Goods

Handling stolen goods offences recorded a decrease in the rate of offences of 6% from 107 to 100 offences per 100,000 persons. Of the total 4,594 offences reported to police in 2010/11, 4,167 (91%) were cleared in the same period, with a further 209 offences cleared from previous periods.

Far North Region recorded the highest rate of handling stolen goods offences while Metropolitan North Region recorded the greatest decrease (23%). Southern Region recorded the largest increase of 10%, however also recorded the lowest rate.

As with most offence categories, males were most likely to commit handling stolen goods offences (77% of offenders were male) and males in the fifteen to nineteen year age group were most likely to offend. Offenders were more likely to be served with a notice to appear (52%) although 39% were arrested.

Other Offences

Other offences is a broad collection of disparate offence categories. These categories are distinct from offences against the person and property in that they are generally offences detected by police rather than being reported by the public. Drug offences, traffic offences and prostitution offences are examples of this. Trends and patterns in the levels of other offences are therefore often indicative of specific initiatives of the Police Service rather than being indicative of the level of crime actually occurring. As such, increases are often seen as a positive improvement of police detection rates. In the 2010/11 financial year much of the State was affected by natural disasters, as such officers of all ranks and functions (including many Queensland Police staff who are not sworn in officers) in every region and command (including many who were off-duty) worked or assisted with the flood response.

As a total, the number of other offences decreased by 9% state-wide from 172,215 offences recorded in 2009/10 to 156,571 offences recorded in 2010/11. This equates to a rate of 3,402 offences per 100,000 persons in 2010/11.

All of the eight regions recorded decreases in total other offences with Far Northern Region recording the largest decrease of 20%. Rates are traditionally higher in the northern part of the State and this trend was again repeated in 2010/11. Northern Region recorded the highest rate, while Metropolitan South Region recorded the lowest.

Drug Offences

Decreases in the number of drug offences in three of the five sub-categories of drug offences contributed to an overall decrease of 1%. When taking into account the growth of Queensland's population, drug offences recorded a decrease of 2%.

Northern Region recorded the highest rate and the largest increase of drug offences in the State. The largest decrease of 17% was recorded by Far Northern Region and Metropolitan South Region recorded the lowest rate (737 offences per 100,000 persons).

Breach of Domestic Violence Protection Orders

Breach of domestic violence protection orders are a breach of a court order and, as such, are classed as "Regina" offences; hence, the inclusion under other offences and not offences against the person.

The 2010/11 financial year recorded a 6% increase in the number of breach of domestic violence protection orders. A total of 10,294 offences were reported to police, equating to a rate of 224 offences per 100,000 persons.

Metropolitan Regions recorded the lowest rates of Breach of Domestic Violence Protection Order offences in the State, while the northern regions again recorded the highest. South Eastern Region recorded the largest increase of 12% and Metropolitan North Region recorded the lowest rate of 108 offences per 100,000 persons.

Weapons Act Offences

The rate of weapons act offences decreased by 3% from 76 offences per 100,000 persons in 2009/10 to 74 offences per 100,000 persons in 2010/11. The overall decrease is attributable to decreases in four of the five weapons sub-categories; unlawful possession of concealable firearm (8%), bomb possession (39%), possession and/or use other weapons (2%) and weapons act offences – other (7%).

Five of the eight regions recorded decreases in weapons act offences during the 2010/11 financial year. Far Northern and Central Regions recorded the largest decreases of 15% and 16% respectively. During 2010/11, Northern Region recorded the highest rate of 123 offences per 100,000 persons while Metropolitan South Region recorded the lowest rate of 54 offences per 100,000 persons.

Good Order Offences

The rate of good order offences decreased by 11% from 2009/10 to 2010/11. A total of 47,809 offences were detected by police, which equates to a rate of 1,039 offences for every 100,000 persons. A decrease in three of the four sub categories resulted in the overall decrease in these offences.

Metropolitan South Region recorded the largest decrease of 21% however the region recorded the lowest rate for good order offences. Higher rates are generally seen in the northern regions and this occurred again in 2010/11 with Northern Region recording the highest rate of 2,025 offences per 100,000 persons.

Traffic and Related Offences

The number of traffic and related offences decreased by 17% from 45,850 to 38,153 offences. All four of the four sub-categories recorded decreases of which the largest was a 50% decrease in interfere with mechanism of a motor vehicle offences. The number of dangerous operation of a vehicle offences decreased by 7%, drink driving offences 13% and disqualified driving offences 30%.

Metropolitan South Region recorded the largest decrease as well as the lowest rate. Far Northern Region recorded the highest rate of 1,274 offences per 100,000 persons.

Please note that the traffic and related offences category referred to above includes dangerous operation of a vehicle, drink driving, disqualified driving and interfere with the mechanism of a motor vehicle only. For information on Speed and Red Light Camera Notices or Random Breath Tests please refer to the traffic section on pages 141-147.

Monthly Crime Trends

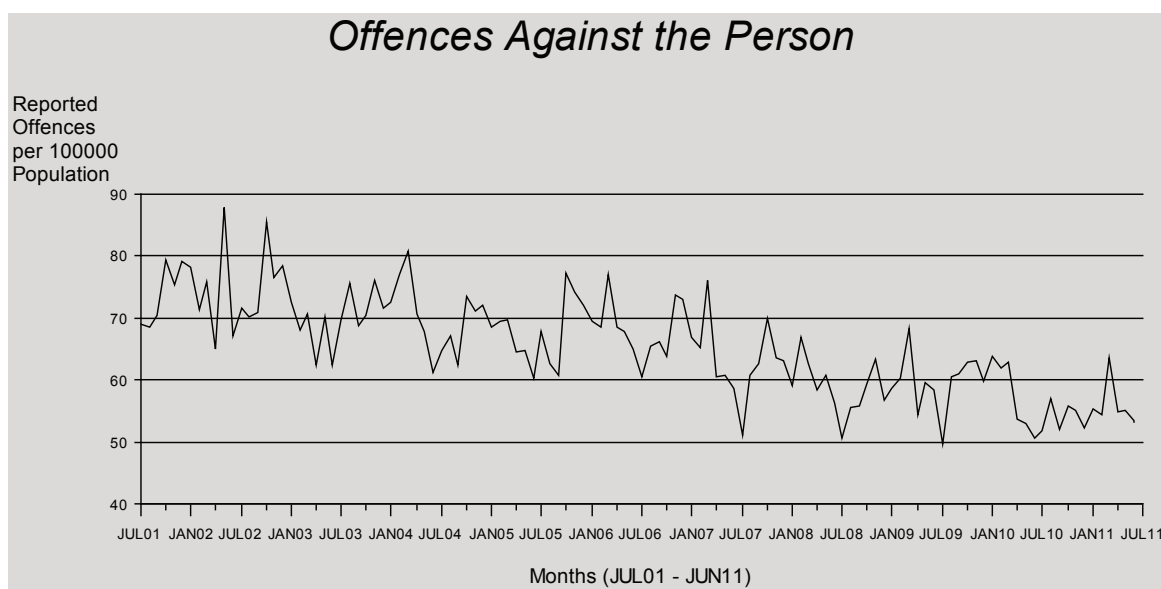

The graphs in this section provide monthly data for selected offence categories from July, 2001 (2001/02 financial year) to June, 2011 (2010/11 financial year), expressed as a rate, thereby factoring in the size of the Queensland population for each year. All crime statistics appearing in these graphs are comparable over the ten year period except where indicated with a break in continuity.

Australian Demographic Statistics, December Quarter 2010 (3101.0), Australian Bureau of Statistics were used to calculate the rates up to June, 2011.

To test for a statistically significant trend in the following graphs, Kendall's rank order correlation test (Conover, W.J. 1971 *Practical*

Non-Parametric Statistics, 2nd edition, John Wiley and Sons, pages 256-260) was used. Although the 5% level of significance was used, most results were significant at the 1% level. Details are footnoted where appropriate in the text under each graph. This test is a two-tailed test which determines whether there is an increasing or decreasing trend in the recorded number of offences over the one hundred and twenty month period covered in the report.

Some month to month variations in the numbers of recorded offences suggested seasonal factors may be operating. The test for trend is not sensitive to seasonal variations; it is sensitive only to a generally increasing or decreasing trend over the time period examined.

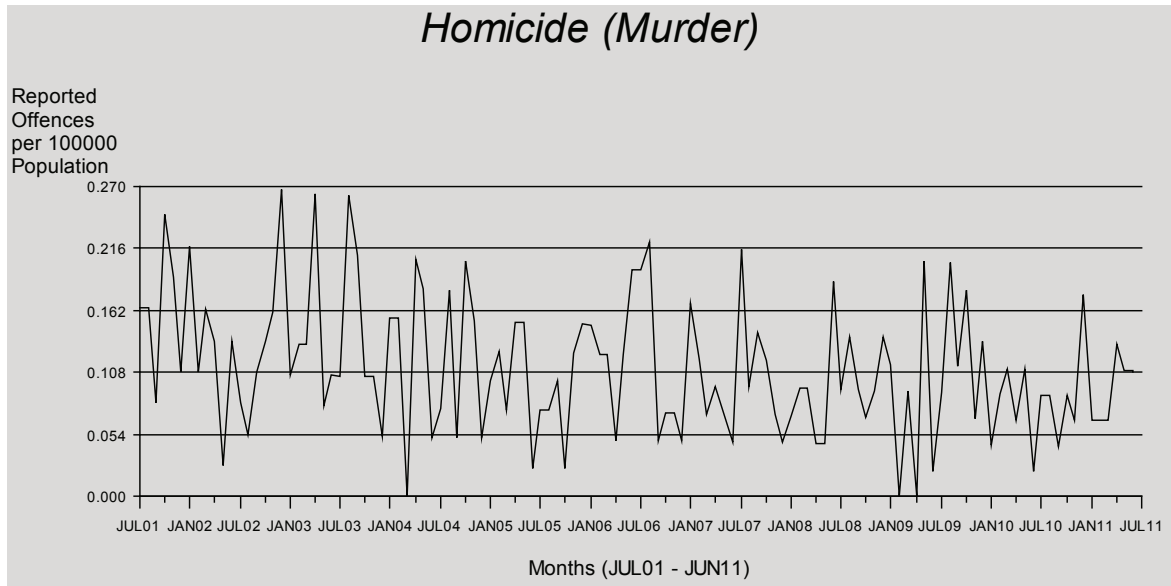

Total offences against the person has a statistically significant* decreasing trend over the ten year period. This broad offence group tends to be dominated by assaults as is evidenced by the strong seasonal influence recorded by the time

series. During the last financial year, offences against the person peaked in Jan due to the higher number of assaults and other offences against the person reported in the month.

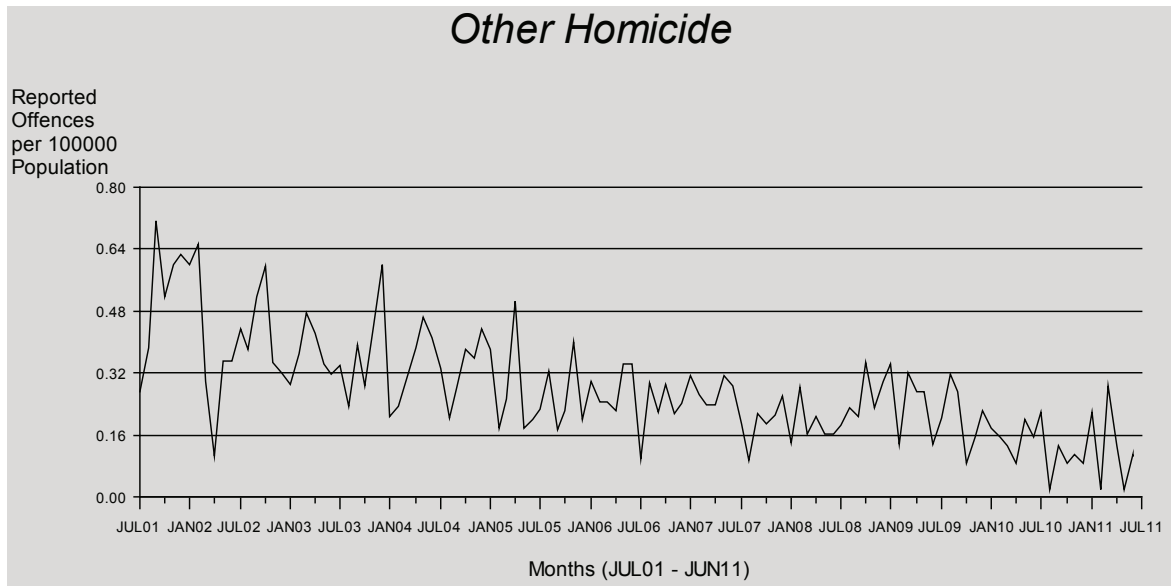

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Over the ten year period there is a significantly decreasing trend* in the homicide (murder) time series. This small volume offence is subject to marked fluctuations from one month to the next.

There were 50 reported murders in 2010/11 for Queensland which is five less than the previous year.

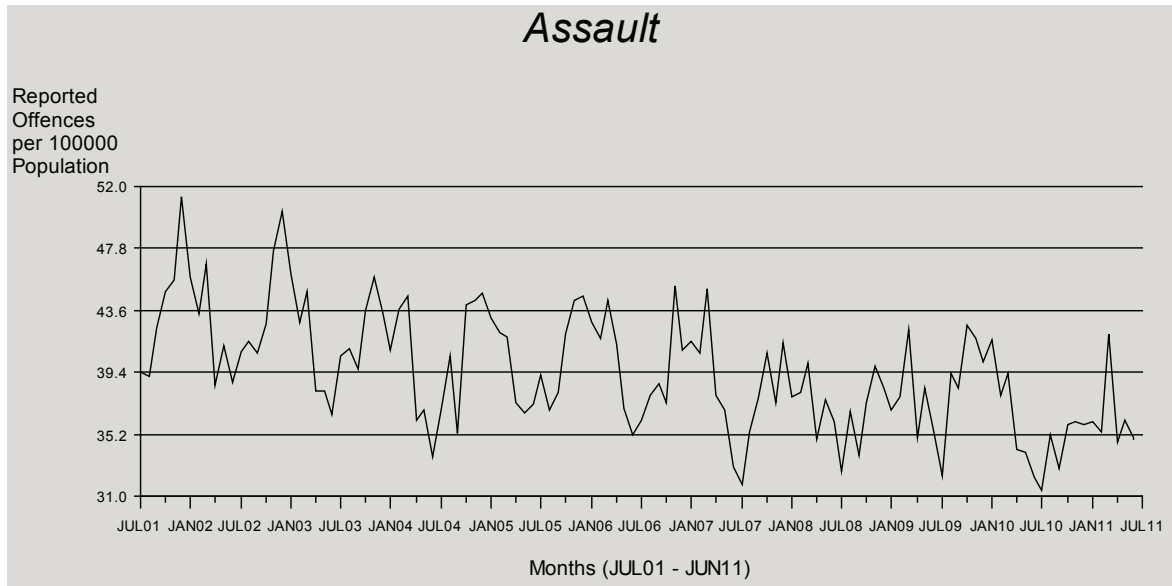

As with homicide (murder), other homicide is a low volume offence category and, as such, is subject to random fluctuations from month to month.

Over the ten year period, there is a significantly decreasing trend* for the other homicide time series. Other homicide reported a decrease of 33% in the 2010/11 financial year.

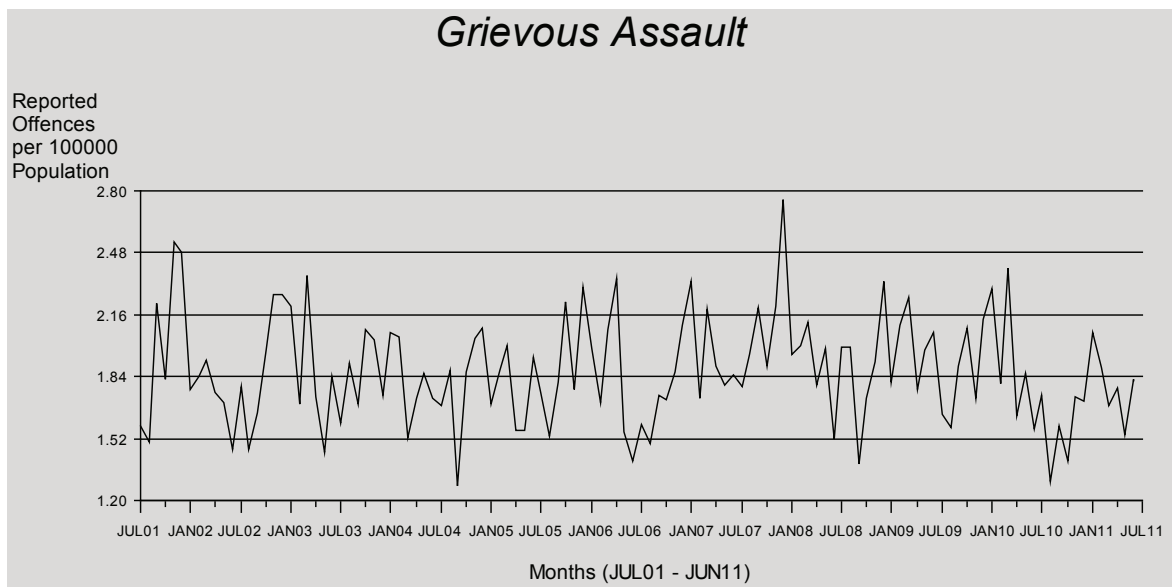

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Assault is the largest in volume of the offences against the person categories. There was a statistically significant decreasing trend* detected for the 2010/11 period.

Assault offences are subject to strong seasonal influences, which are evident in the time series, with a higher rate of offences occurring over the summer months and a lower number of offences occurring in the winter.

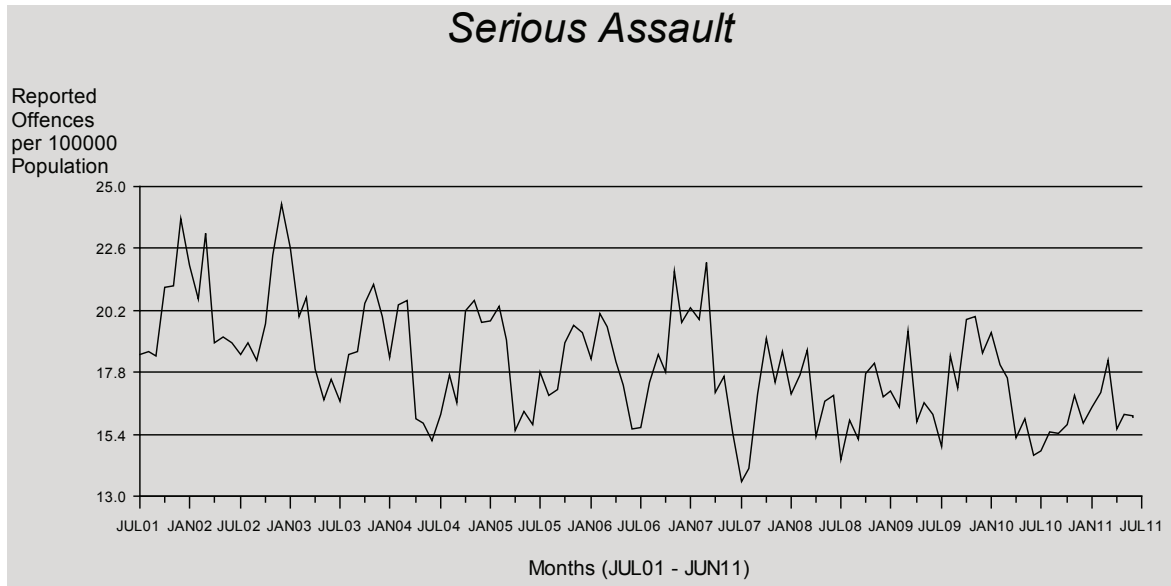

Overall, the rate of grievous assaults has no statistically significant increasing or decreasing trend* over the ten year period.

The seasonal influence is obvious in the time series with the peaks occurring in the summer months.

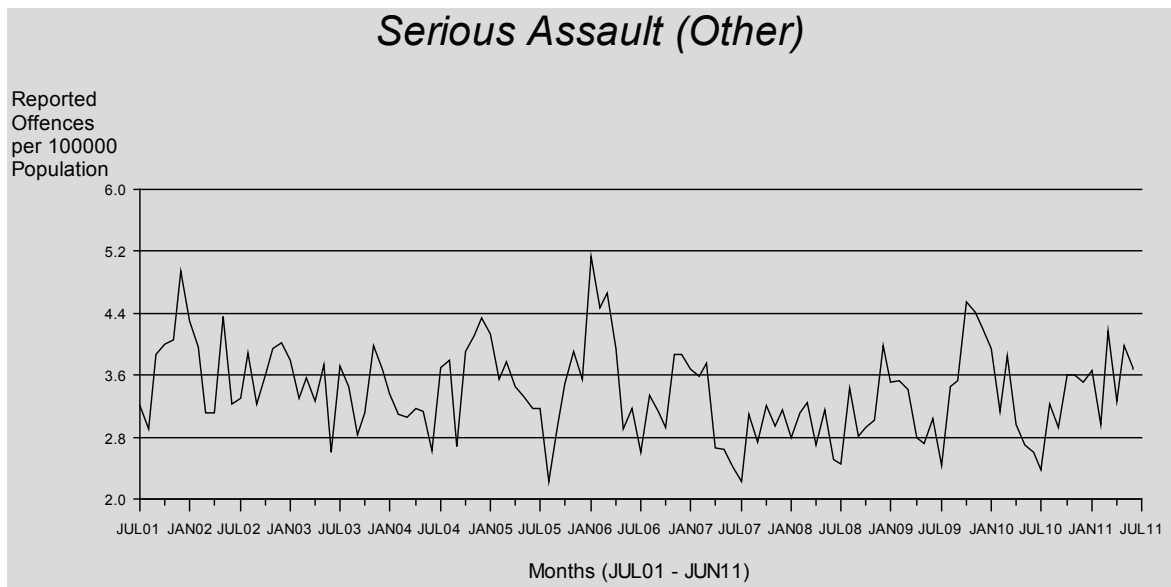

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Again, the strong seasonal influences are evident in this time series, with a higher rate of offences occurring over the summer months and a lower

rate of offences occurring in the winter months of each year. A significantly decreasing trend was detected over the ten year period*.

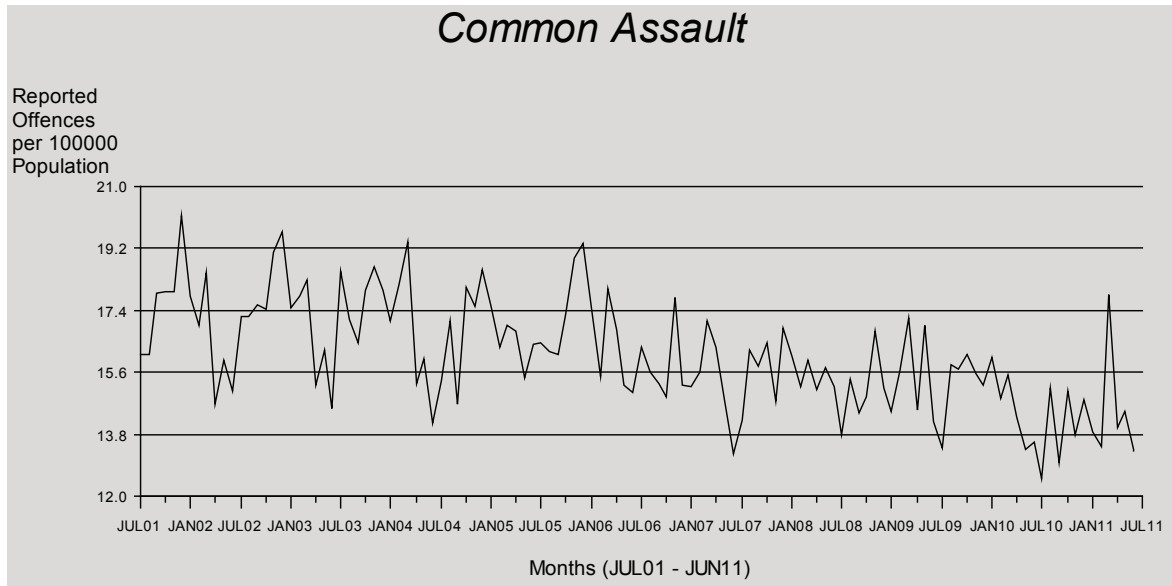

Serious assault (other) has no significant increasing or decreasing trend* over the ten year period. Although less apparent than for the other sub-categories of assault, the peaks and troughs

reflect the strong seasonal influence exerted on the time series with the higher rates occurring in the summer months.

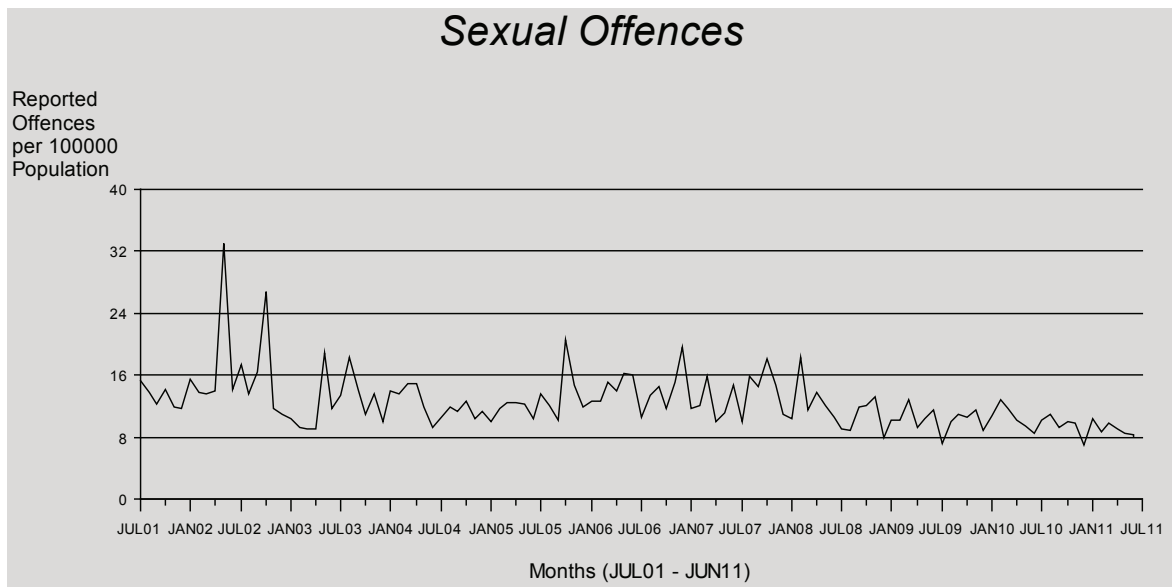

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

The stability in the trend of common assault offences continues into 2010/11. There is a statistically significant decreasing trend*. As with all sub-categories of assault, the seasonal

influence is apparent in the graph above. Overall, this time series records a statistically significant decreasing trend*.

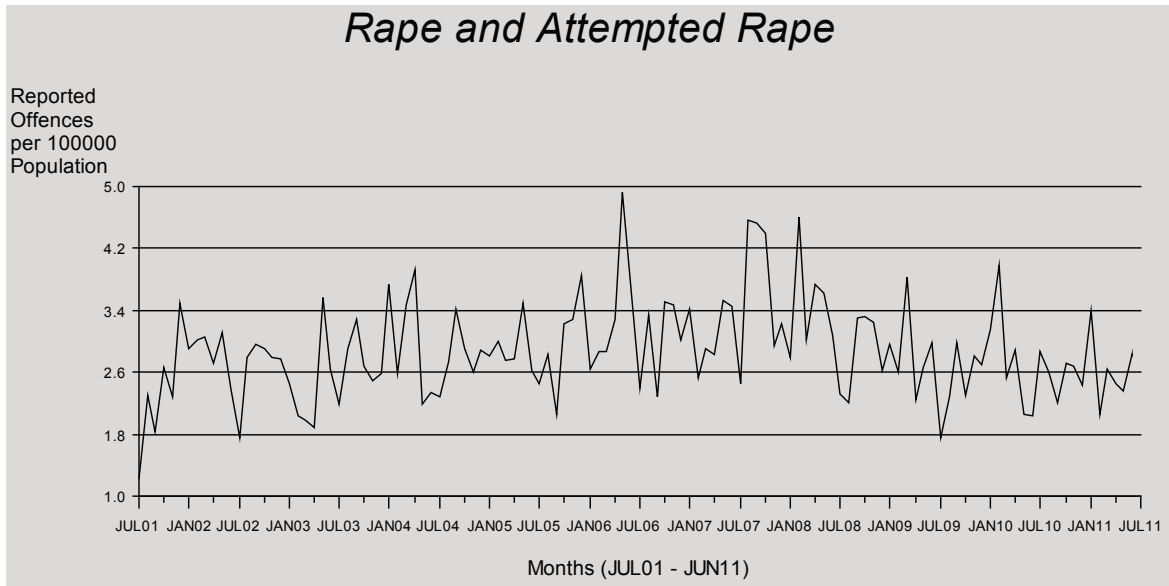

The two spikes in the sexual offences time series are the result of a large number of charges preferred against two offenders in May and October 2002. Spikes can also be seen in October 2005, December 2006, August 2007 and February 2008 again as the result of a large

number of offences being reported for incidents that occurred over a period of time and by a small number of offenders. Overall, this time series records a statistically significant decreasing trend*.

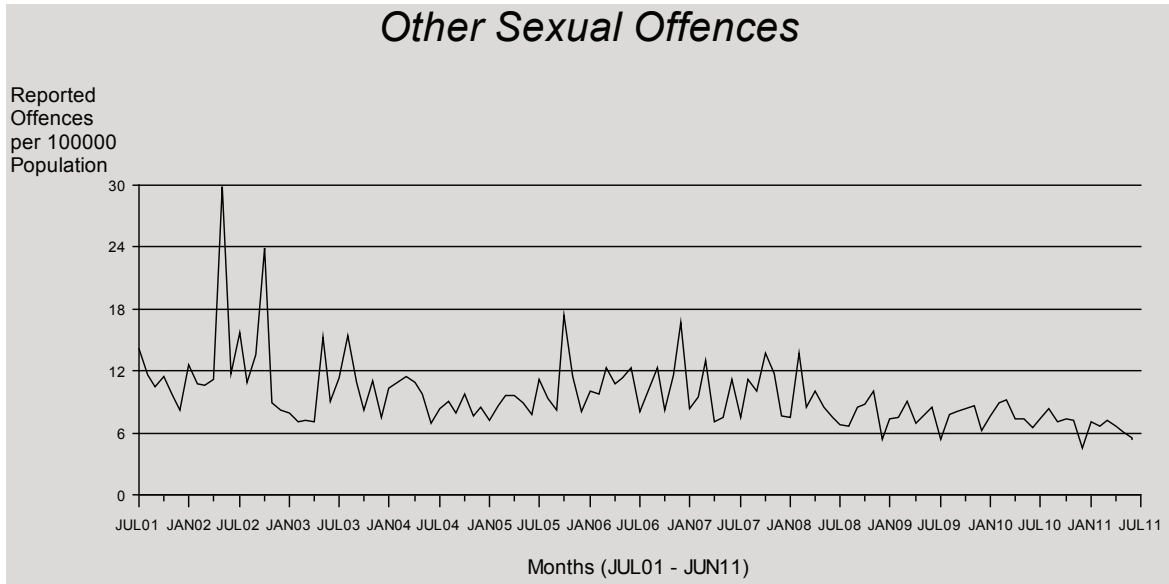

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Spikes in this series can be seen in May 2006, August 2007, February 2008 and January 2010 as the result of a large number of offences being reported as occurring over an extended period of

time by a small number of offenders. There is no statistically significant increasing or decreasing trend* over the ten year period.

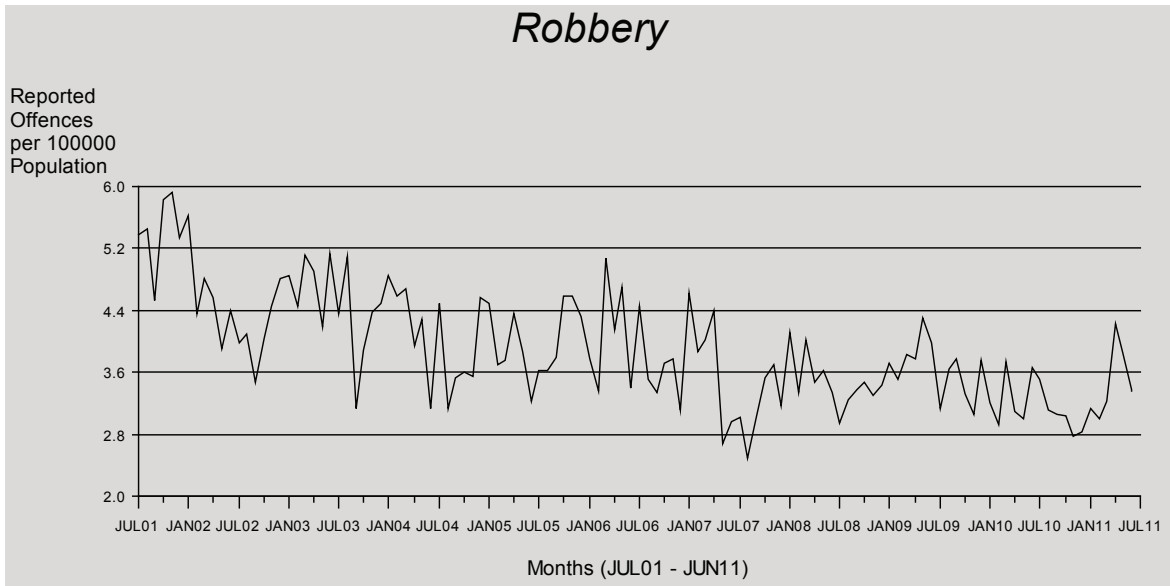

Single offenders were charged with in excess of 660 and 400 other sexual offences for incidents which occurred over a period of time. The charges were preferred in May and October 2002 respectively resulting in the first and second large spikes in the time series. Multiple reports

relating to historical offences with large counts were responsible for the spikes in October 2005 and December 2006 and to a lesser degree in April 2008 and February 2009. Overall, this time series records a statistically significant decreasing trend*.

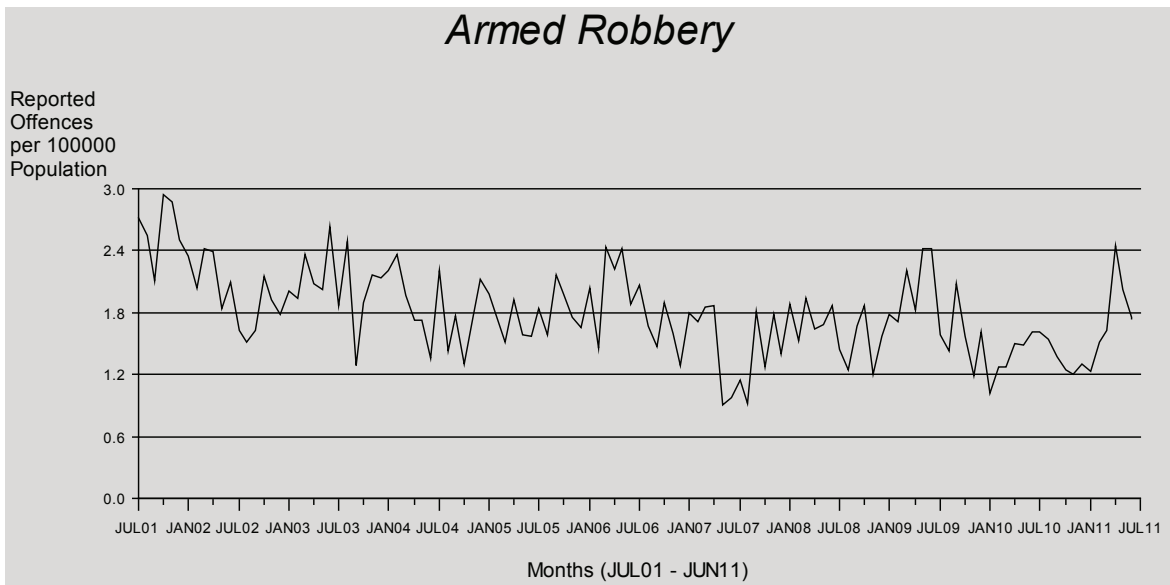

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Rates of robbery offences decreased noticeably from mid 2001 to 2002. A spike in the series can be seen between March and May 2011 due to an increase in both armed and unarmed

robbery offences. Overall rates of robbery offences continued to recorded a significantly* downward trend.

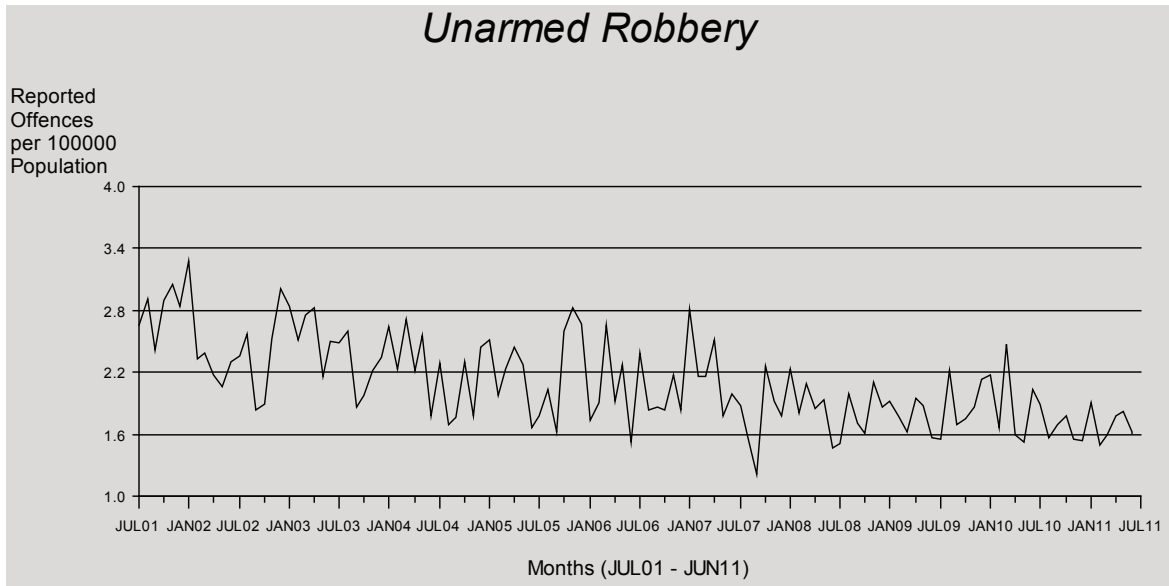

Although the overall trend in the rate of armed robbery has been decreasing significantly* since 2001/02, the time series recorded an increase

in 2008/09 of 12% and the current period under review of 7%.

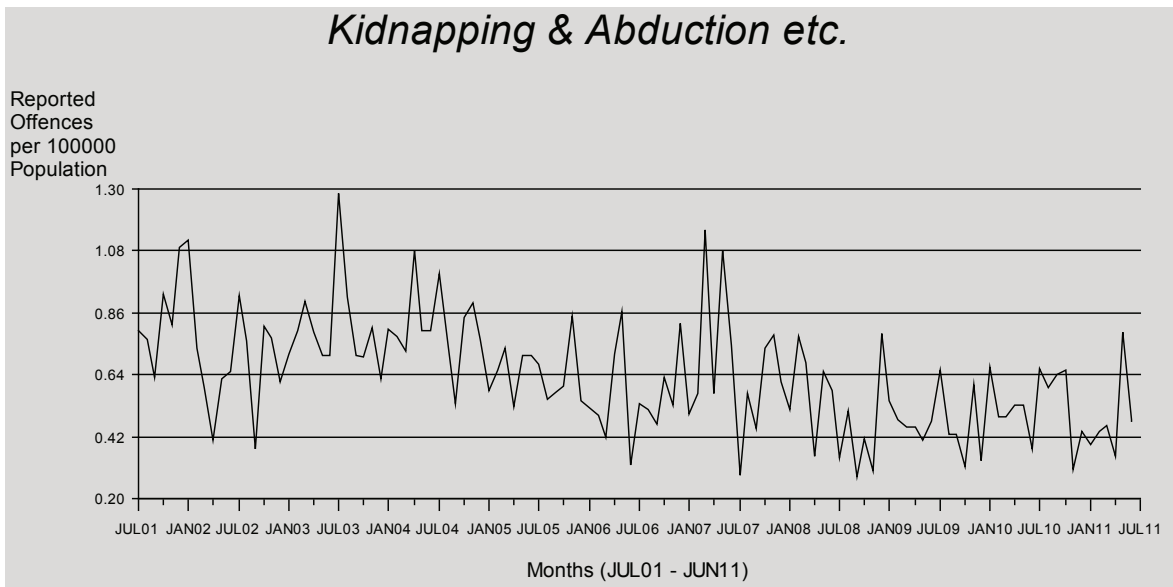

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Rates of unarmed robbery have recorded fluctuations over time however, have continued to record an overall downward trend*. During

the current period, unarmed robbery offences recorded a decrease of 11%.

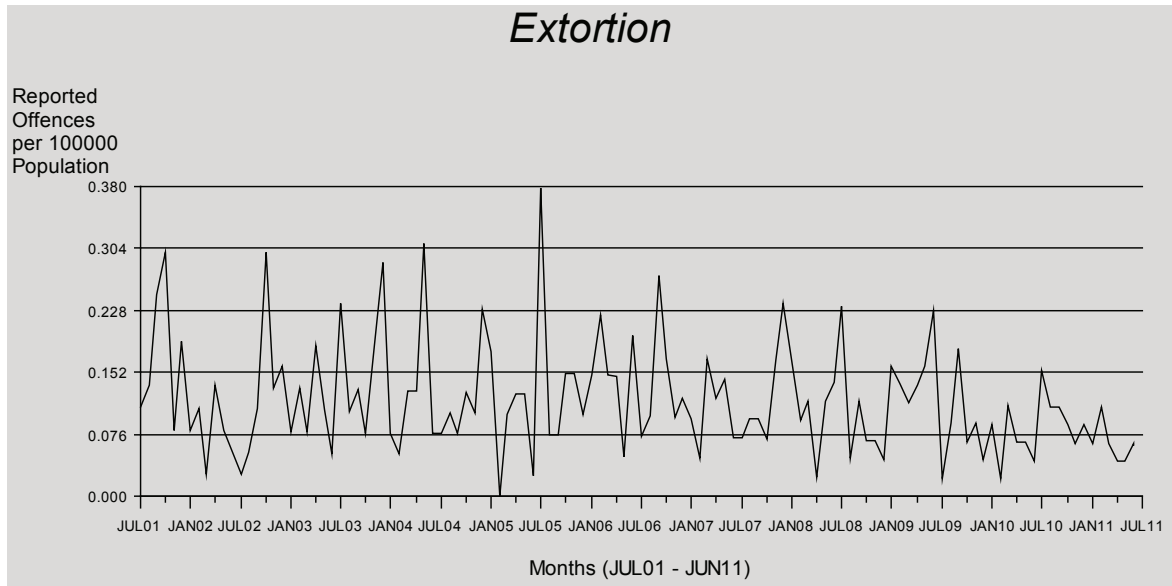

This time series is subject to the fluctuations that occur in small volume offence categories. The rates of kidnapping and abduction etc. offences

have been steadily decreasing over the ten year period of the time series and records a statistically significant decreasing trend*.

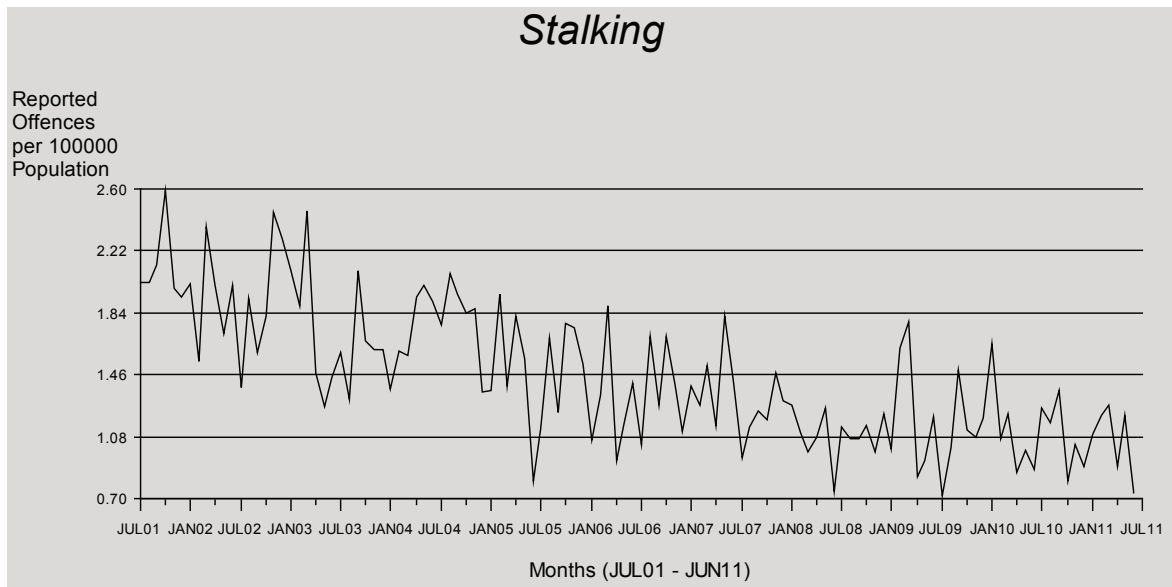

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Extortion is the lowest in volume of the other offences against the person categories and, as such, is prone to random variations from month

to month. Overall, no statistically significant increasing or decreasing* trend was detected over the ten year period.

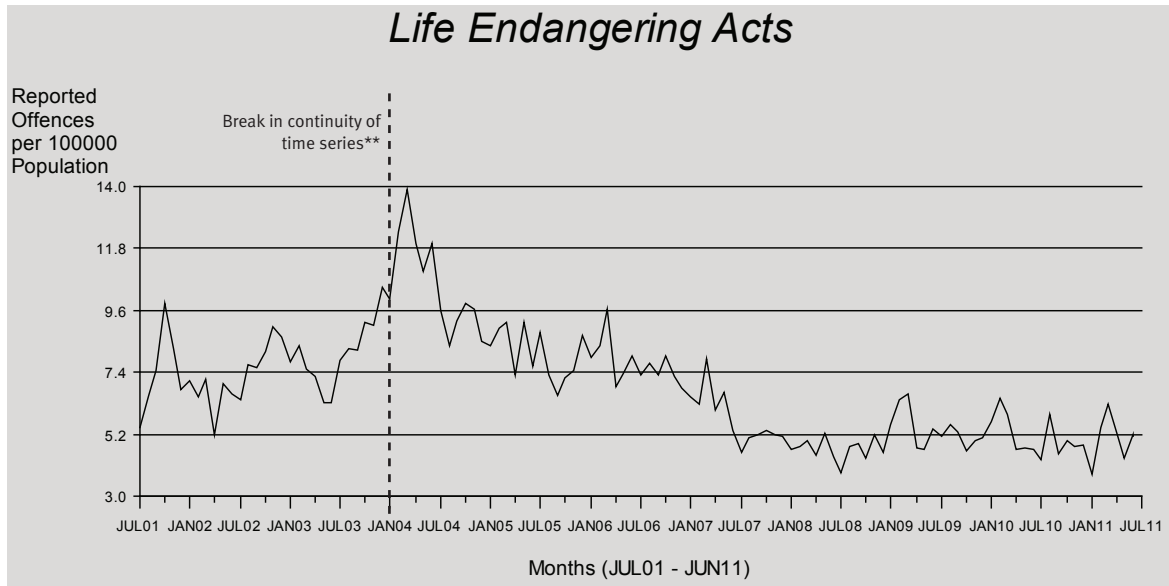

As can be seen in the graph above, the time series displays a statistically significant decreasing trend* over the ten year period. The State recorded a 2% decrease in stalking offences during the

2010/11 financial year and records a statistically significant decreasing trend* over the ten year period.

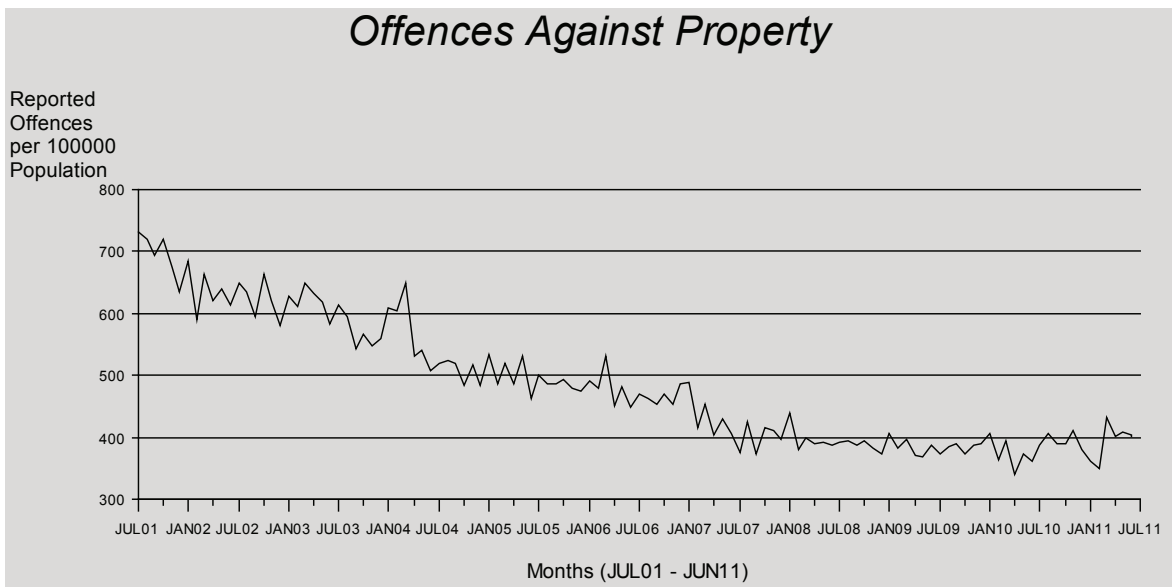

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Due to a review conducted in January 2004 by the Crime and Misconduct Commission, the recording of child abuse cases has undergone changes**. The rate of life endangering acts offences have

been steadily decreasing since April 2004 and records a statistically significant decreasing trend* over the ten year period.

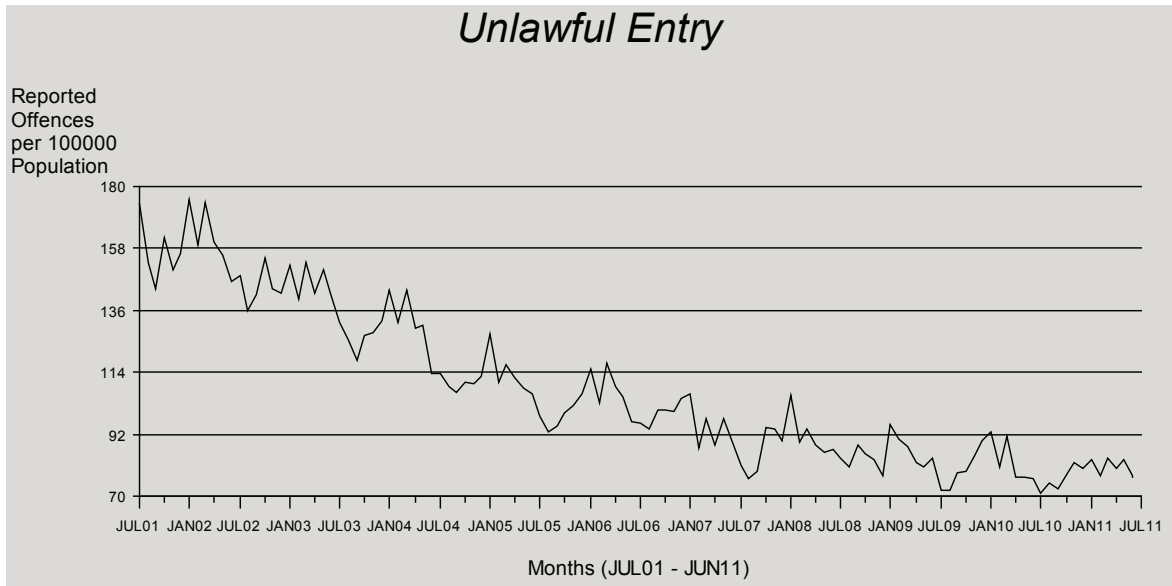

The offences against property time series has historically shown has a statistically significant downward trend*. This is a large volume offence group and, as such, increases or decreases are usually small in the overall context. The rate of

offences against property during the current time period increased by 4%, this is the first time during the previous ten years that this offence group has increased.

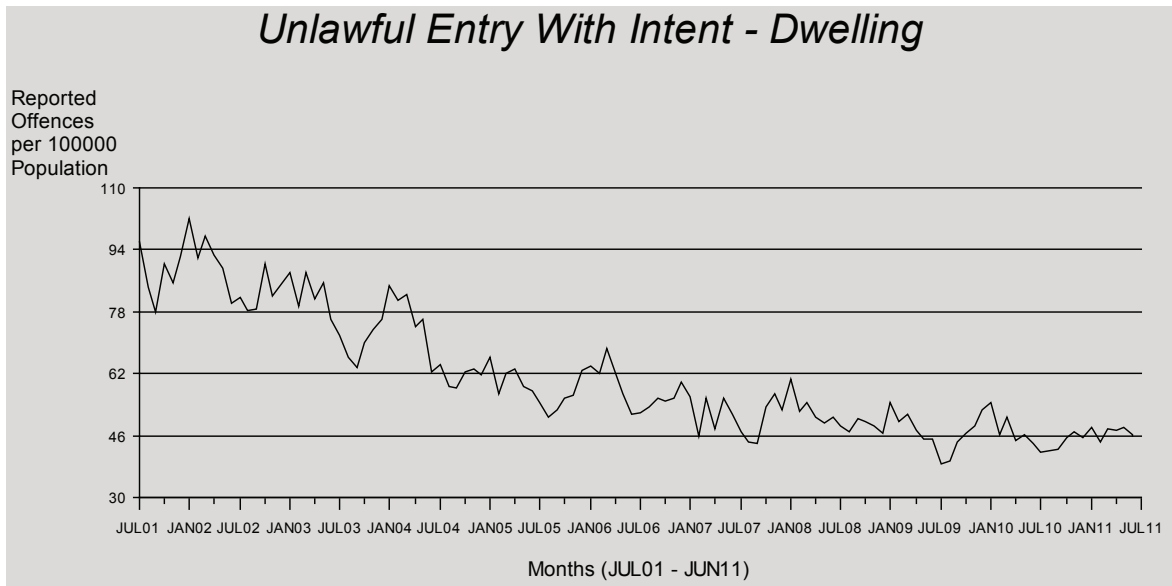

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Overall, there was a statistically significant decreasing trend detected* for unlawful entry. In the current period, the rate of unlawful entry

offences decreased by 3% following on from a decrease of 4% in the 2009/10 financial year.

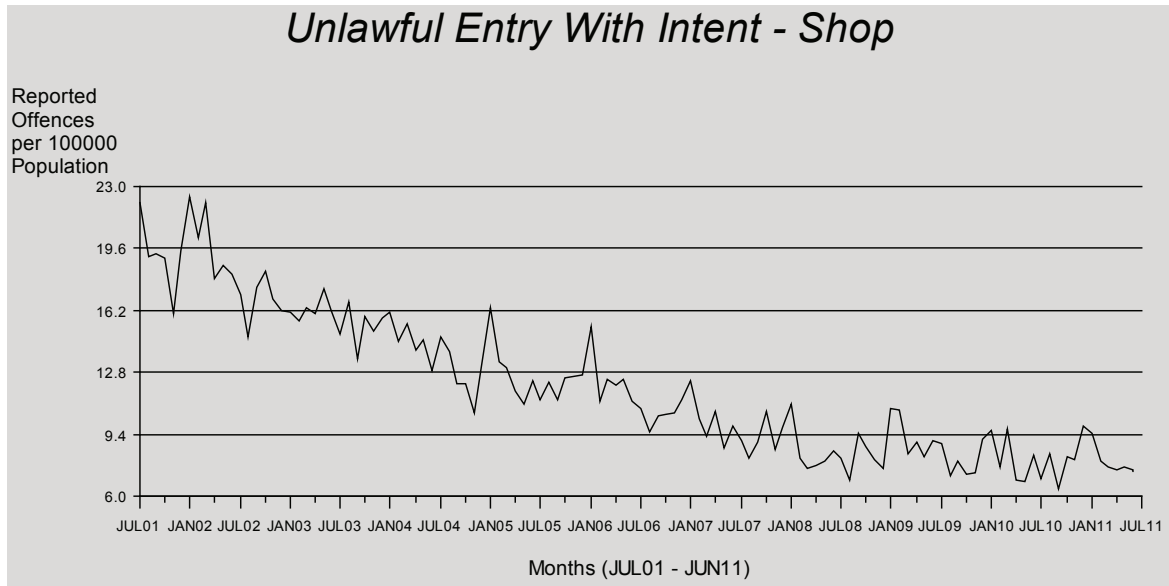

The rate of unlawful entry with intent – dwelling has been steadily decreasing from 2001 to the extent that an overall statistically significant decreasing trend* was detected. The rate

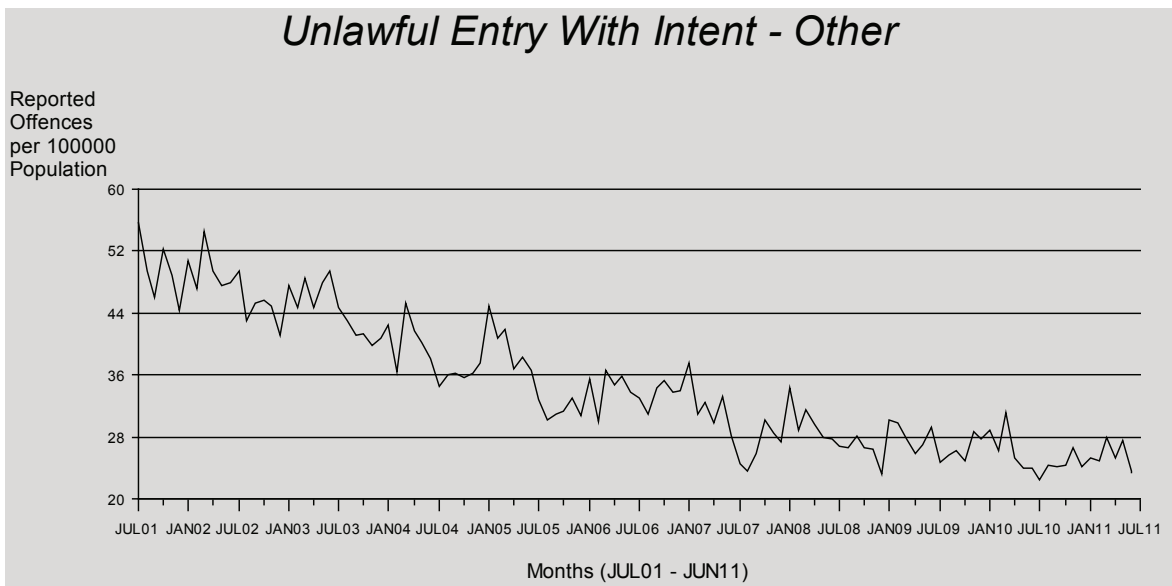

continued to decrease reflecting a 2% reduction in the current review period. The fact that this offence is subject to seasonal variation is evidenced in the graph above.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

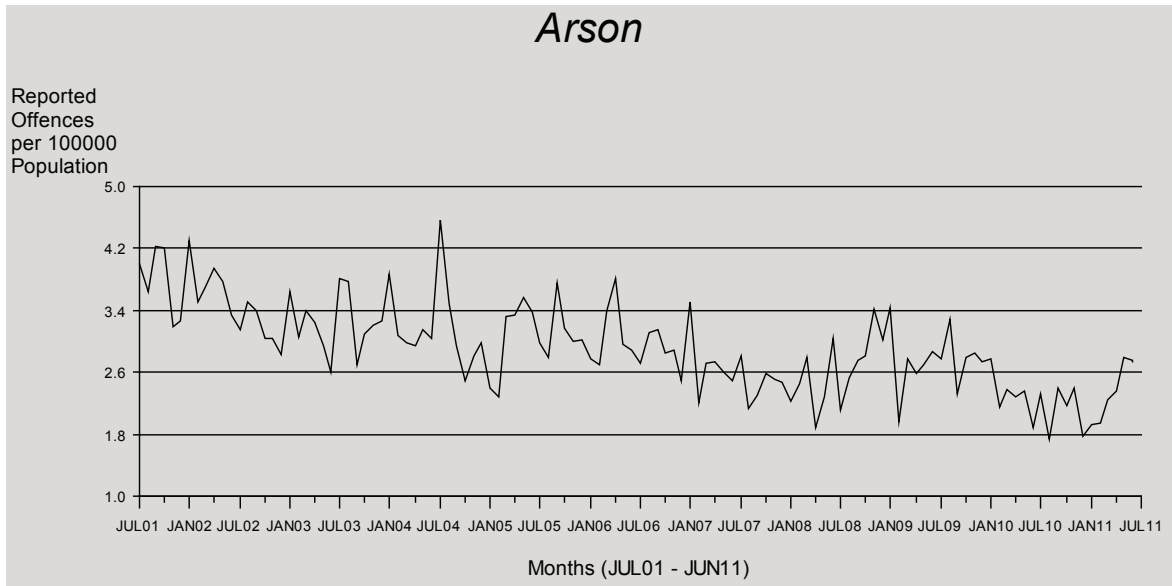

Over the ten years, the rate of unlawful entry - shops offences has been significantly decreasing*. Unlawful entry - shops offences recorded an 1% decrease for 2010/11 financial year. This follows a 8% decrease recorded in the previous year.

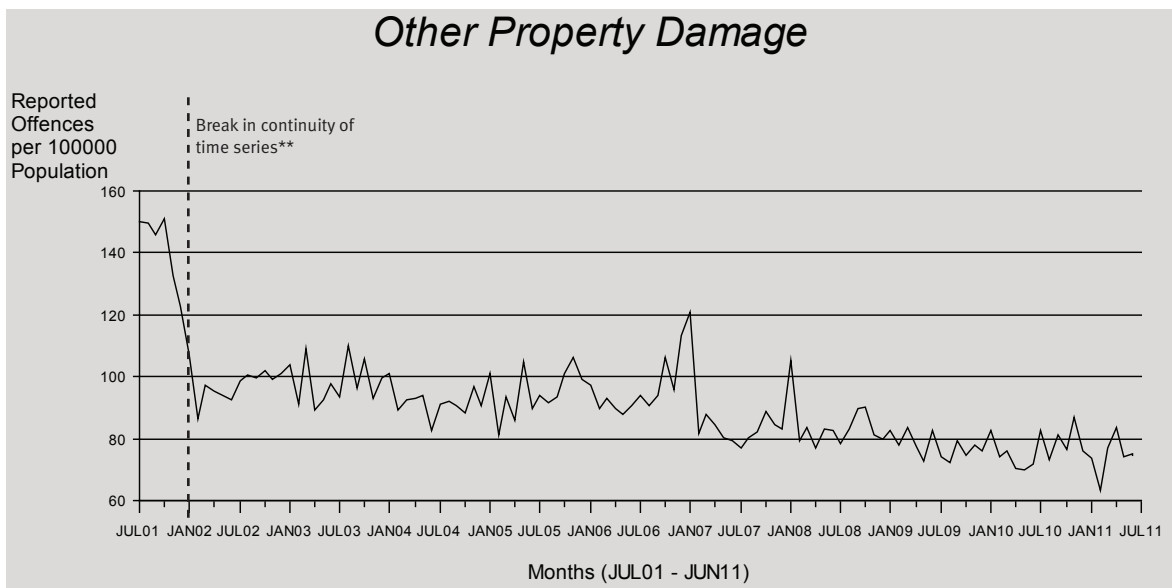

Overall, there was a significantly decreasing trend* apparent at the end of the time series. Unlawful entry - other premises recorded a 5% decrease in the current period under review. The reductions over the last ten financial years are

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Over the ten years of the time series, a statistically significant downward trend* was detected for arson offences. For the year under review, the rate of arson offences decreased by 12% from 30 to 27 offences per 100,000 persons.

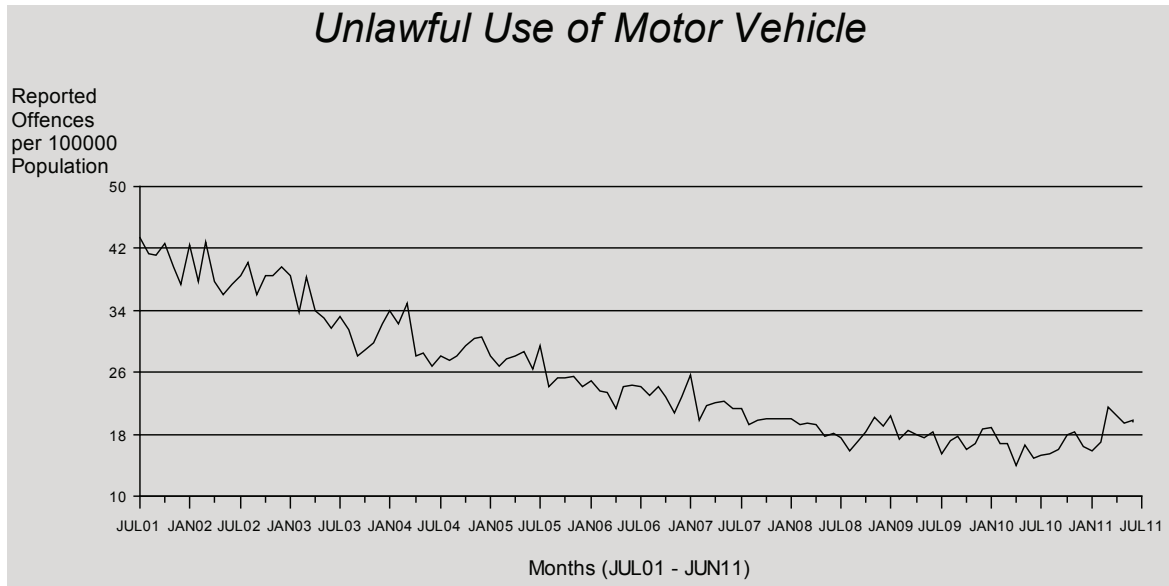

The sharp decrease in the first half of the time series is the result of a change in policy regarding the reporting of other property damage offences. This break in continuity** effectively renders a statistical test invalid. While the change in policy contributed to a 20% decrease in the rate of offences in 2001/02, this downward trend has continued for the next eight years.

** Change in policy regarding the recording of property damage offences in conjunction with unlawful entry and unlawful use of motor vehicles has resulted in a break of continuity and, thus, caution should be exercised when looking at offences over time (see Explanatory notes page 150 for further information).

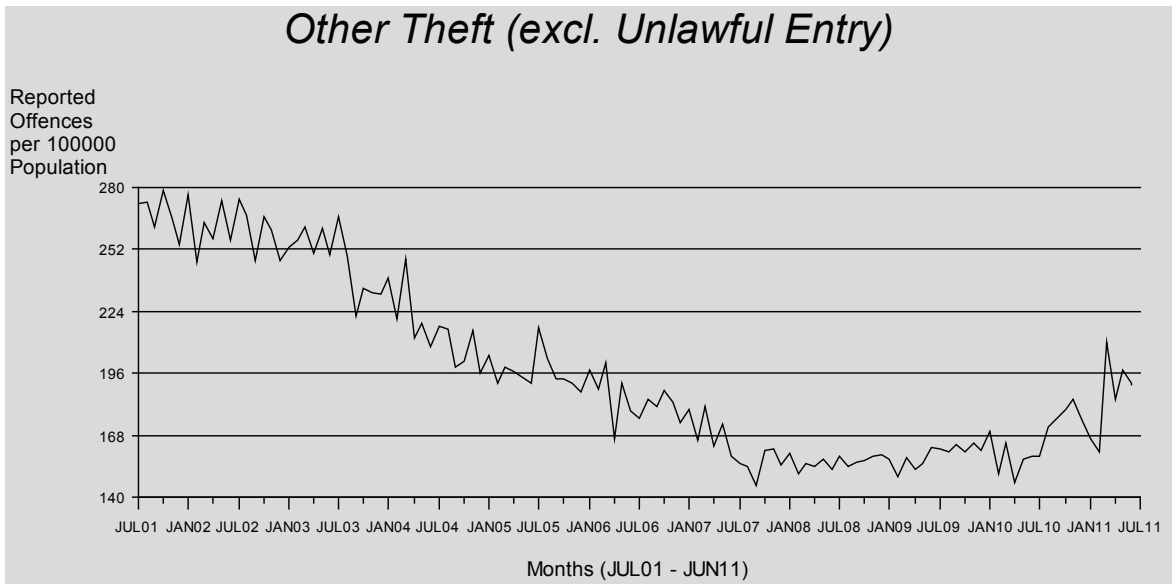

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Overall, a statistically significant decreasing trend* was detected for the unlawful use of motor vehicle time series. As with other offences against property, the substantive decreases recorded in the rate of unlawful use of motor vehicle offences

over the last nine years is apparent at the end of the time series. During the current period under review, unlawful use of motor vehicle offences recorded a 7% increase.

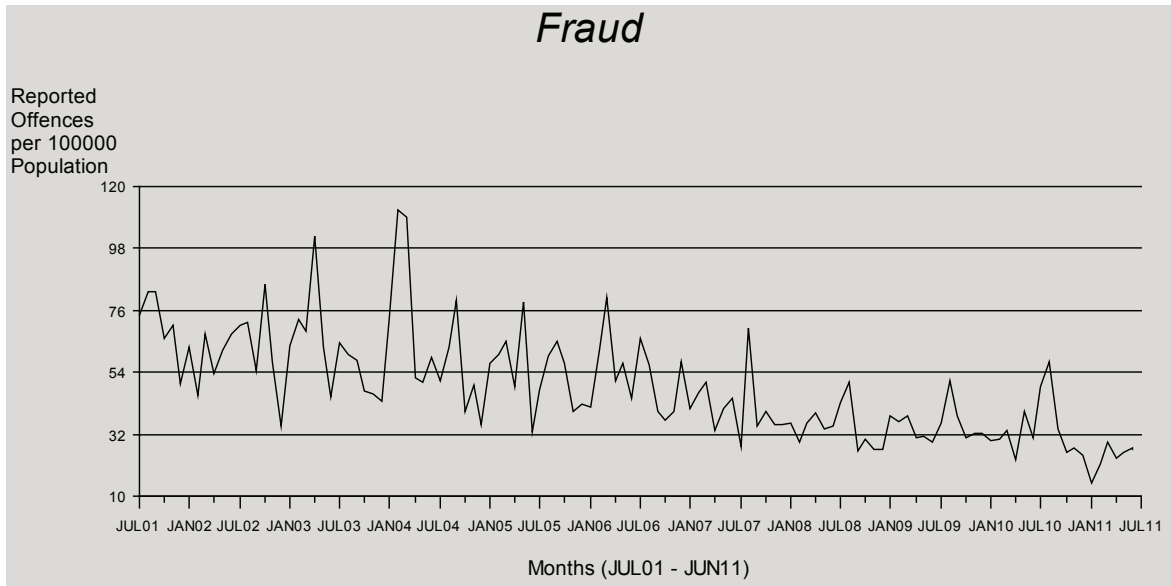

A statistically decreasing trend* was detected for the other theft (excluding unlawful entry) category. A decrease in offences can be seen since July

2003. However, the current period recorded a 12% increase following a 2% increase recorded during the previous period.

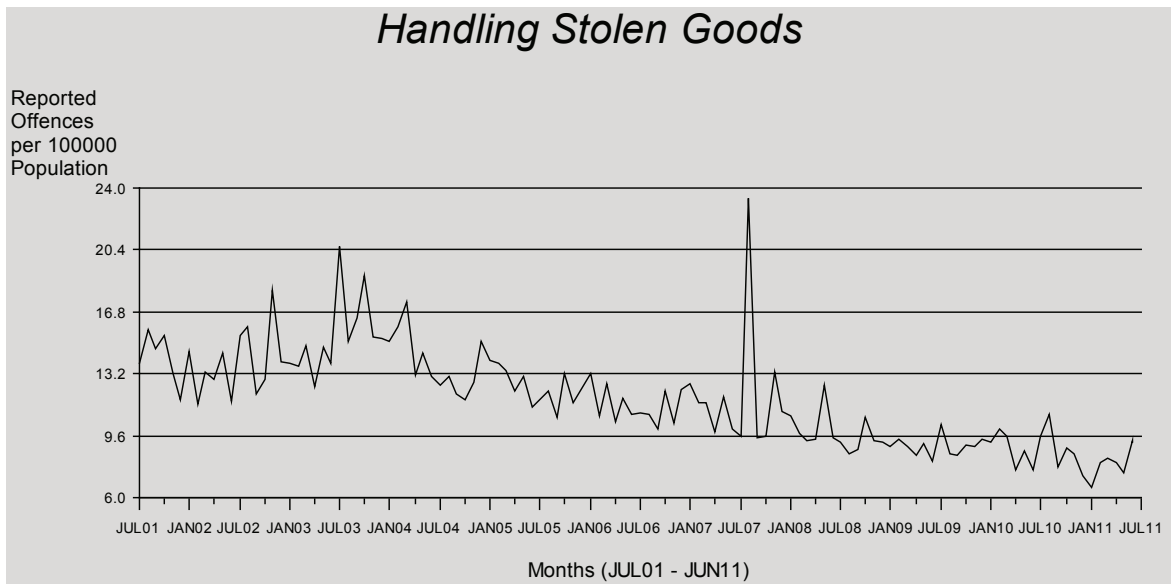

Includes attempted offences.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

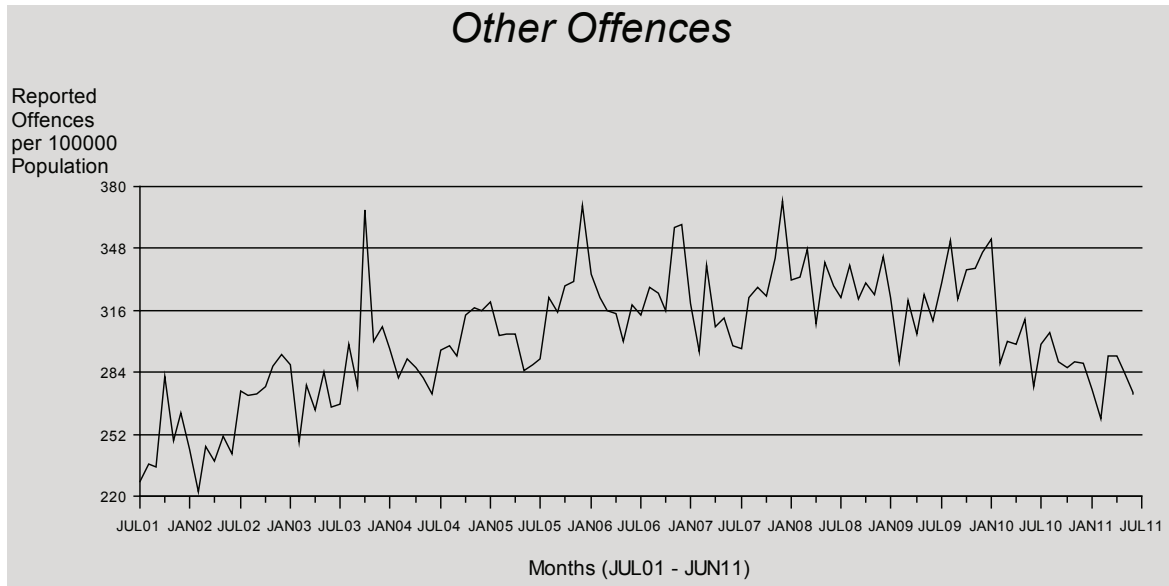

There is a statistically significant downward trend* in fraud offences as evident in the graph above. Four of the five sub-categories of fraud recorded decreases resulting in an overall decrease of 12% during the current reporting period.

A statistically significant decreasing trend* is evident in the handling stolen goods time series. Over the last 12 months, the rate of offences decreased by 6% after having decreased by 2% during 2009/10. One offender was responsible for the spike in July 2003 being charged with 171 offences. The spike in 2007/08 period was the result of 470 offences preferred against two offenders during August 2007.

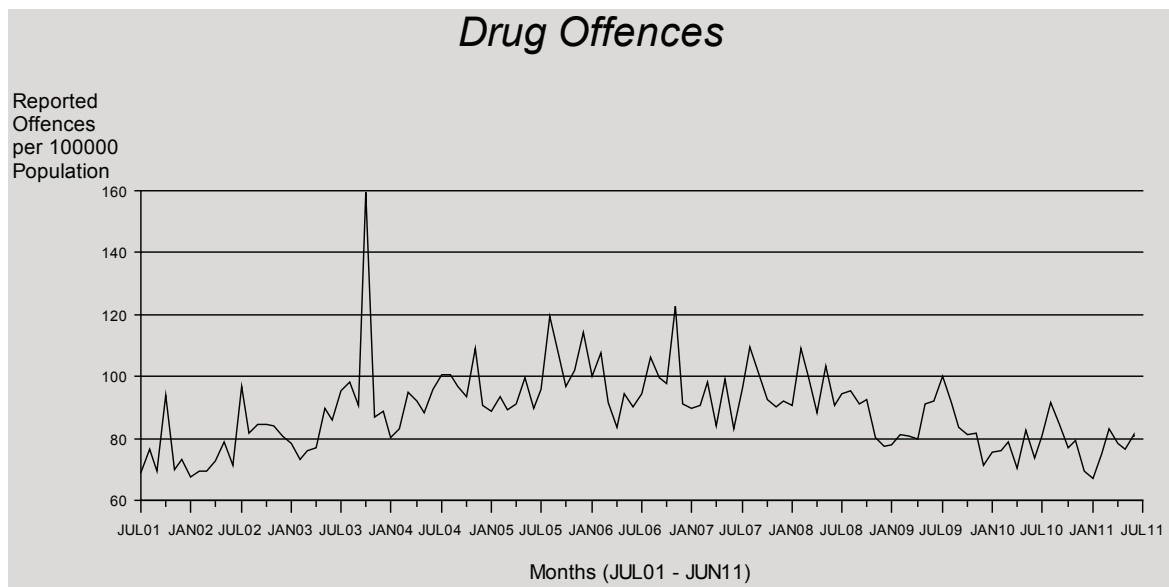

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Other offences are generally detected by police rather than reported to police. As such, any rise in other offences is usually regarded as a positive result. As is evidenced in the graph

above, a statistically significant upward trend* was detected, however a decrease of 11% was recorded by the State in the rate of other offences in the period under review.

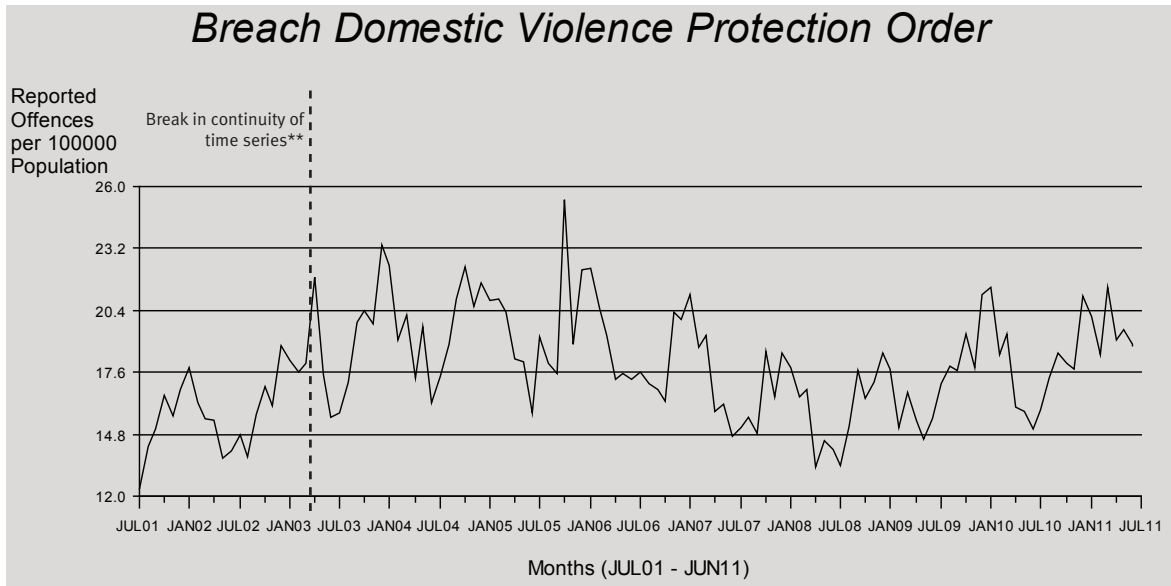

No statistically significant increasing or decreasing* trend was detected over the ten year period. Following a slight decrease in the rate of drug offences from early 2000 to end 2001, rates again increased in 2003/04. The spike in the

middle of the time series was the result of over 2100 offences laid against a single offender in October 2003. The State recorded a decrease of 2% in the current period.

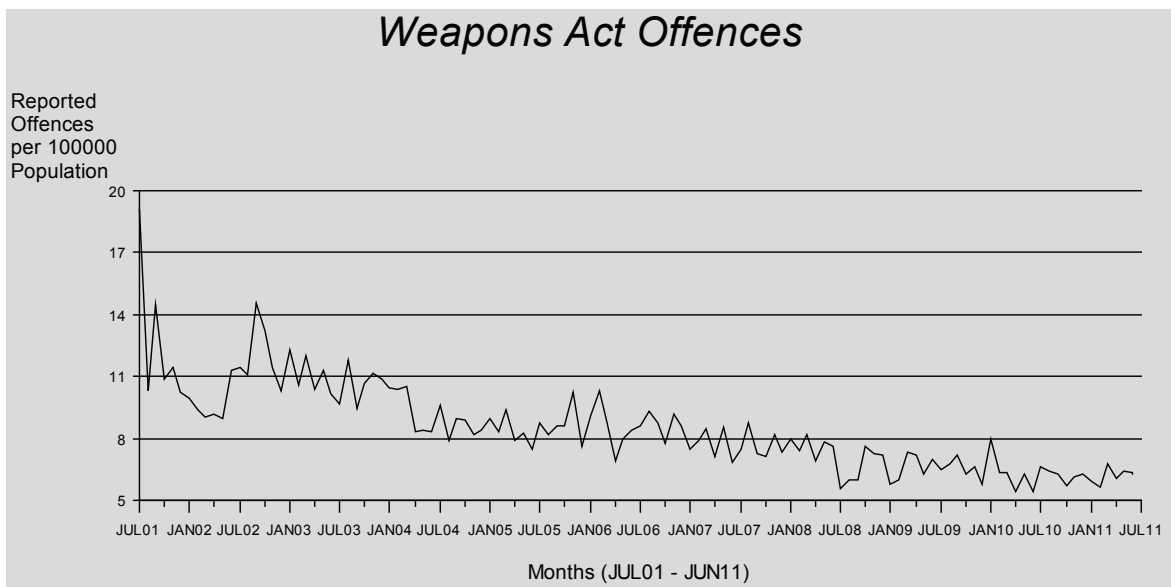

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

The legislative change in March 2003** caused a break in the continuity of this time series. Since this amendment, the time-series has stabilised. The spike recorded in October 2005 was the result of nearly 226 offences committed by one offender and reported to police in this month. Breach of

domestic violence protection orders are subject to strong seasonal influences, as is evidenced in the graph above. No statistically significant increasing or decreasing* trend was detected over the ten year period.

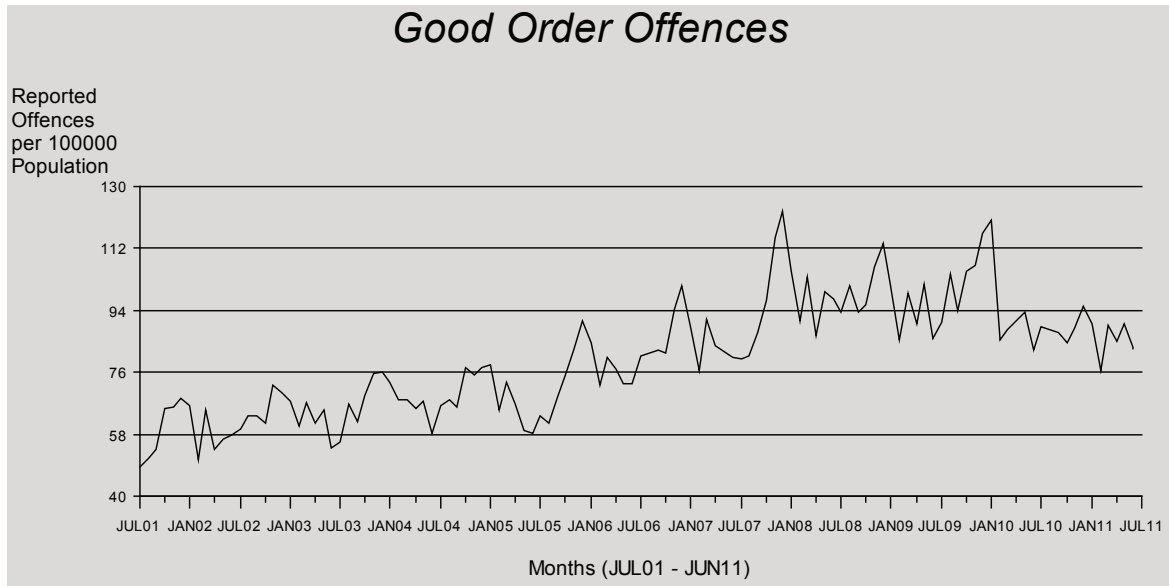

A statistically significant decreasing trend* is evident in the weapons acts offences time series. Since January 2003, the time series has been

decreasing. The rate of weapons act offences decreased by 3% in the current period under review.

** The Domestic and Family Violence Protection Act 1989 was expanded in March 2003 to include intimate personal, familial and informal care relationships.

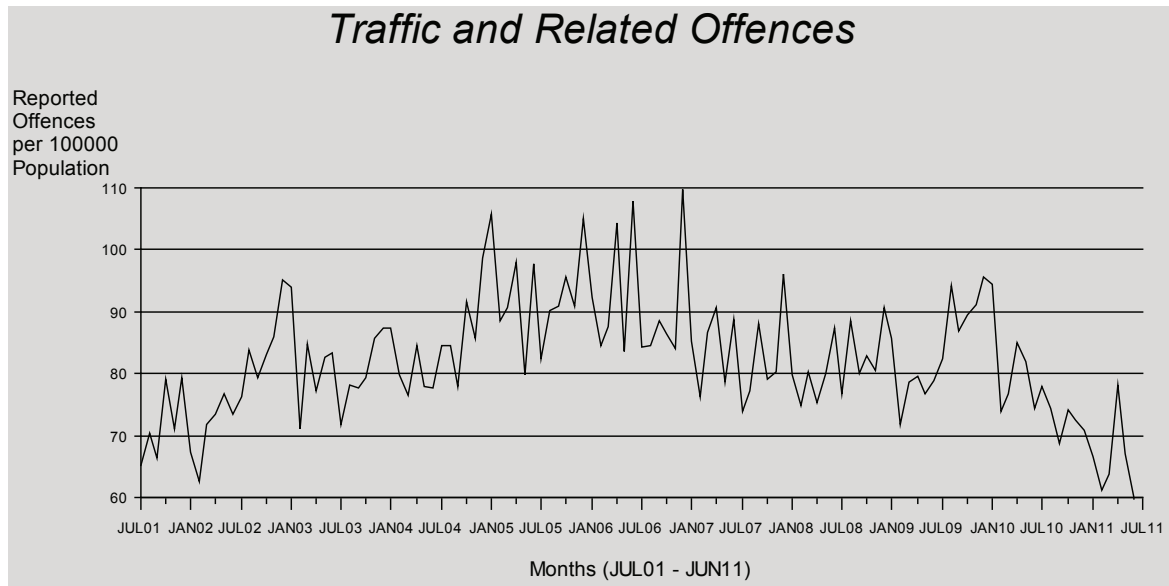

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

While the time series for good order offences records a statistically significant upward trend*, a strong seasonal influence can also be seen. Offences tend to peak in the summer months and

fall to a low during the winter months of each year. Good order offences have recorded a decreased of 11% in the current period.

Overall, no statistically significant increasing or decreasing* trend was detected over the ten year period. The current period under review recorded

an 18% decrease in the rate of traffic and related offences.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

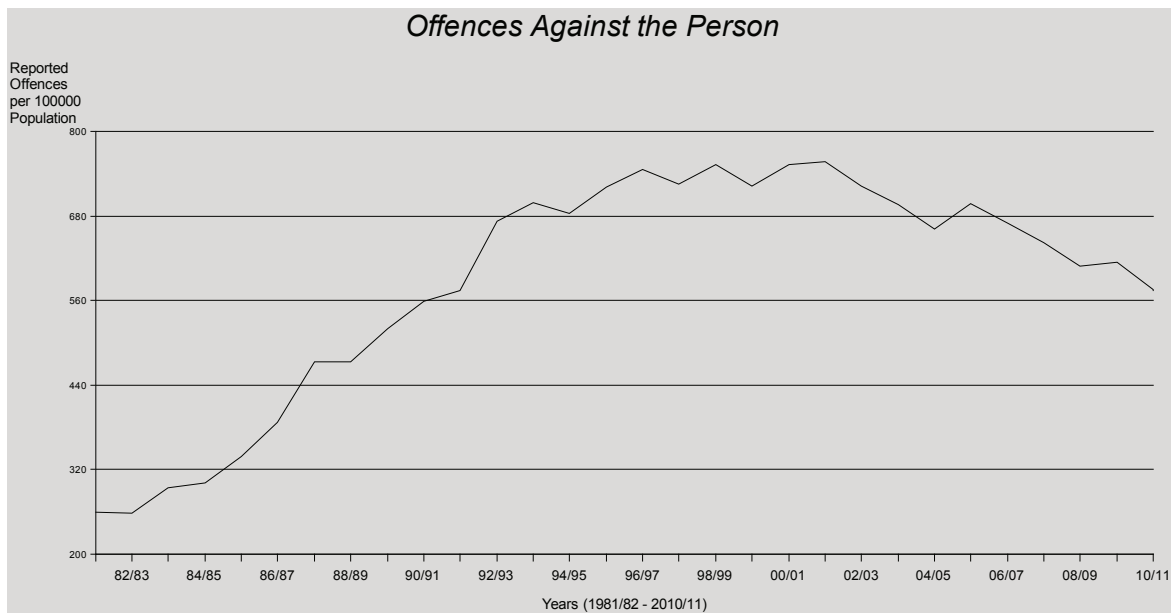

Annual Crime Trends

In this section, an examination of the number of selected offences per 100,000 persons is provided for a thirty year period. The rates provided in this section are based on Estimated Residential Populations, or projections thereof, at 30 June each year, provided by the Australian Bureau of Statistics and the Office of Economic and Statistical Research, Queensland.

Since 1980/81, many legislative changes have occurred, and the classification, recording and reporting systems used by the Queensland Police Service have evolved. Therefore, some offence categories, for which thirty years of comparable statistics are not available, have not been included.

The offence categories which have been included in this section are those that have a reasonable degree of consistency and comparability for the past thirty years. Some of these categories (such as unlawful entry and drink driving) have undergone considerable change at certain times. These breaks in continuity have been noted in the accompanying text where appropriate.

Prior to 1991/92, all crime statistics produced by the Queensland Police Service were based on the date the information related to the crime was received at the Information Bureau (and its precursors) in Police Headquarters. Since 1991/92, the reference date has been the date the offence is reported to police.

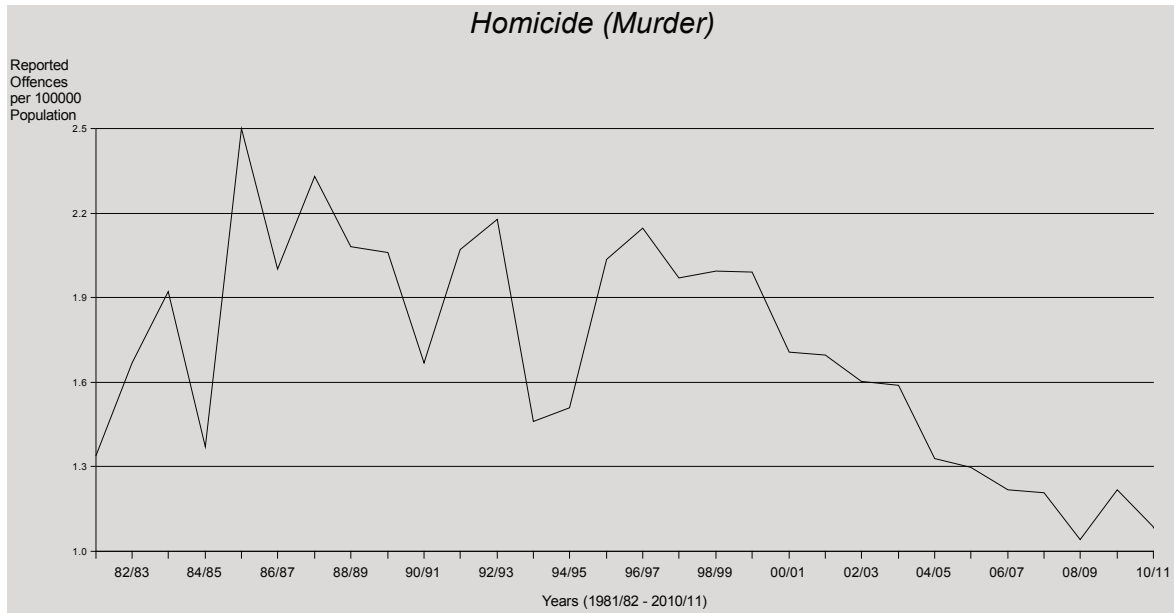

While this broad offence aggregate is comprised of a number of different offence categories, the offence category of assault tends to dominate offences against the person. As such, the offences against the person time series largely reflects the

assault time series. Offences against the person has seen an increase during the late 1980's and early 1990's. The rate stabilised from the mid to late 1990's and has shown a decreasing trend over the last six years.

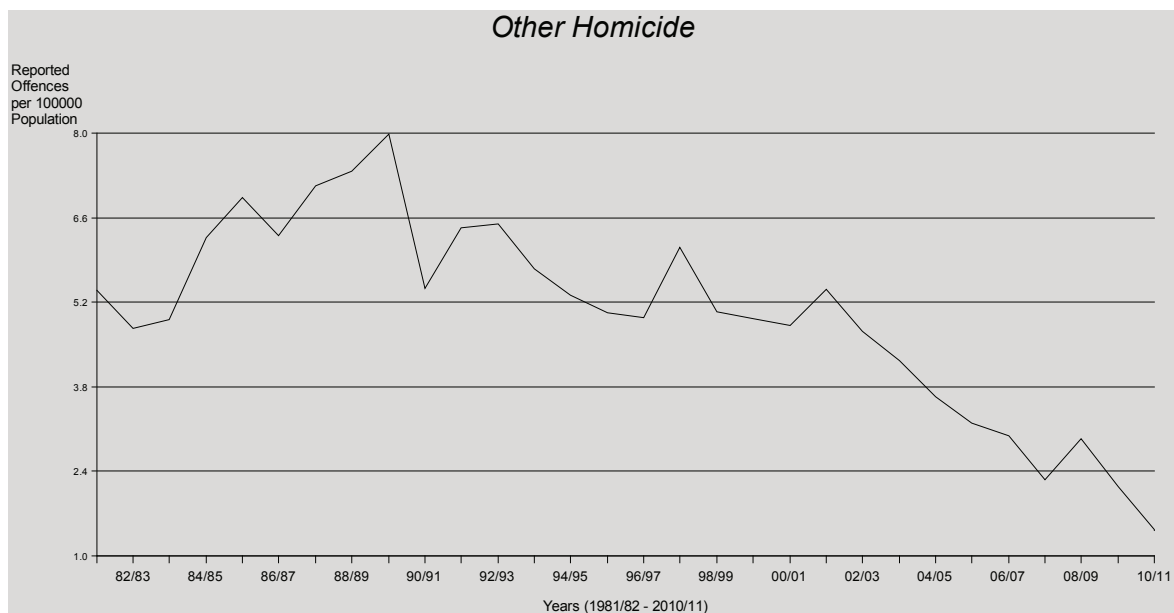

* The offence category of other offences against the person is not included in offences against the person.

Annual Crime Trends

Homicide (murder) is a small volume offence and, as such, is subject to sizeable fluctuations from year to year. Overall, however, the homicide (murder) rate has changed little. Following a peak in 1996/97, the rate of homicide (murder)

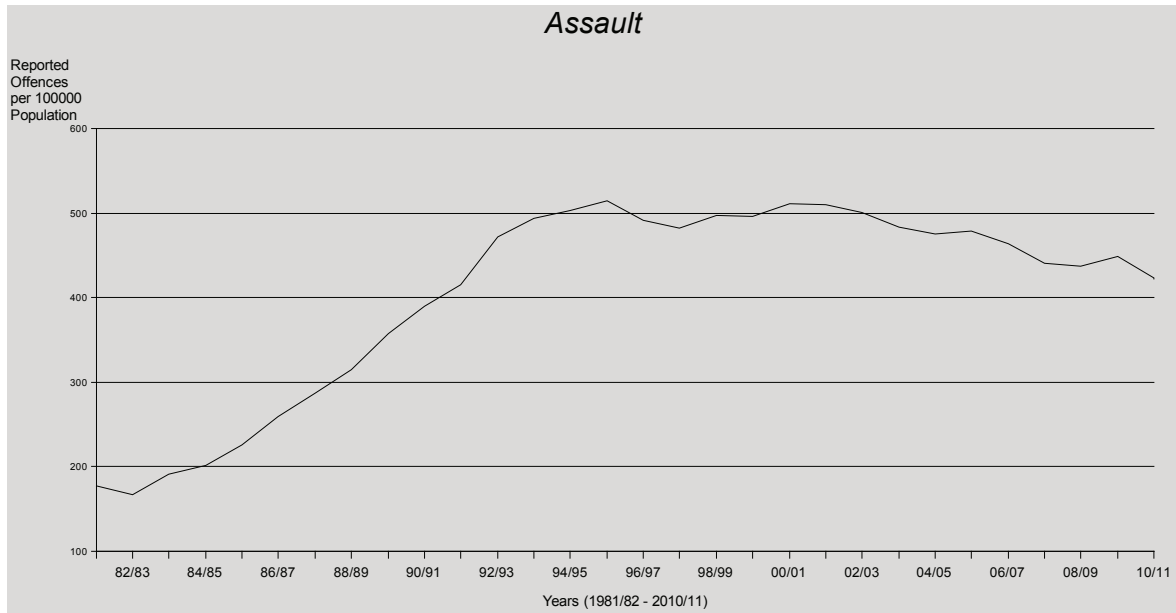

has been steadily decreasing until 2008/09. In 2009/10, the rate increased by 16% and followed in 2010/11 the homicide (murder) rate decreased by 11% when compared with the previous year.

Other homicide is also a small volume offence category and, as such, is subject to sizeable fluctuations from year to year. From 1987/88 to 1989/90, other homicide offences were reported at a slightly higher rate; however the

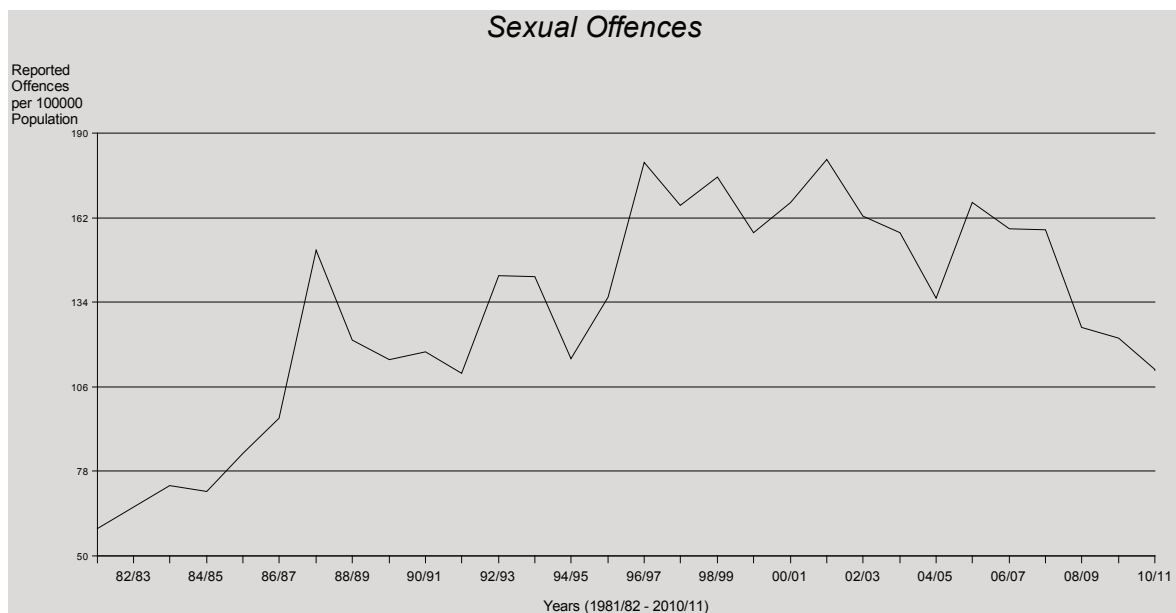

rate has steadily decreased since 1992/93. In 2010/11 there was a 33% decrease in the rate of other homicides, largely as a result of significant decreases in conspiracy to murder and manslaughter (excl. by driving) offences.

Annual Crime Trends

Looking at the overall trend, the rate of assaults steadily increased over the 1980's and even into the early 1990's. Since the mid 1990's, the rate

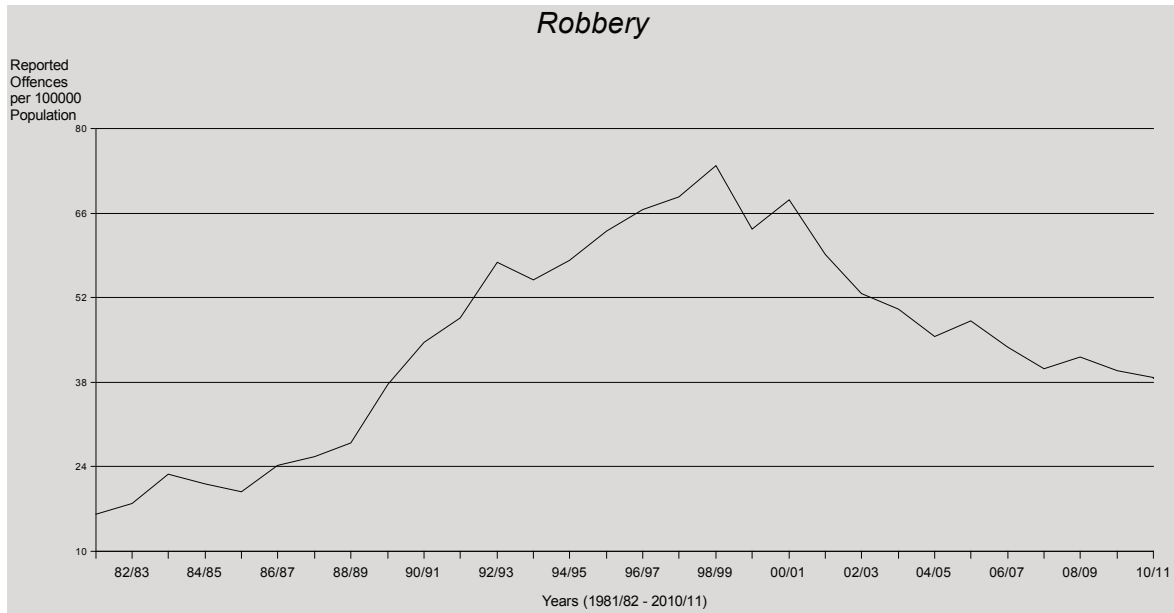

of assault stabilised. During 2010/11 the rate of assaults decreased by 6% from that reported in the previous year.

Sexual offences may be reported to police many years after the offences actually occur and there are often numerous charges preferred against one offender. These factors have resulted in the

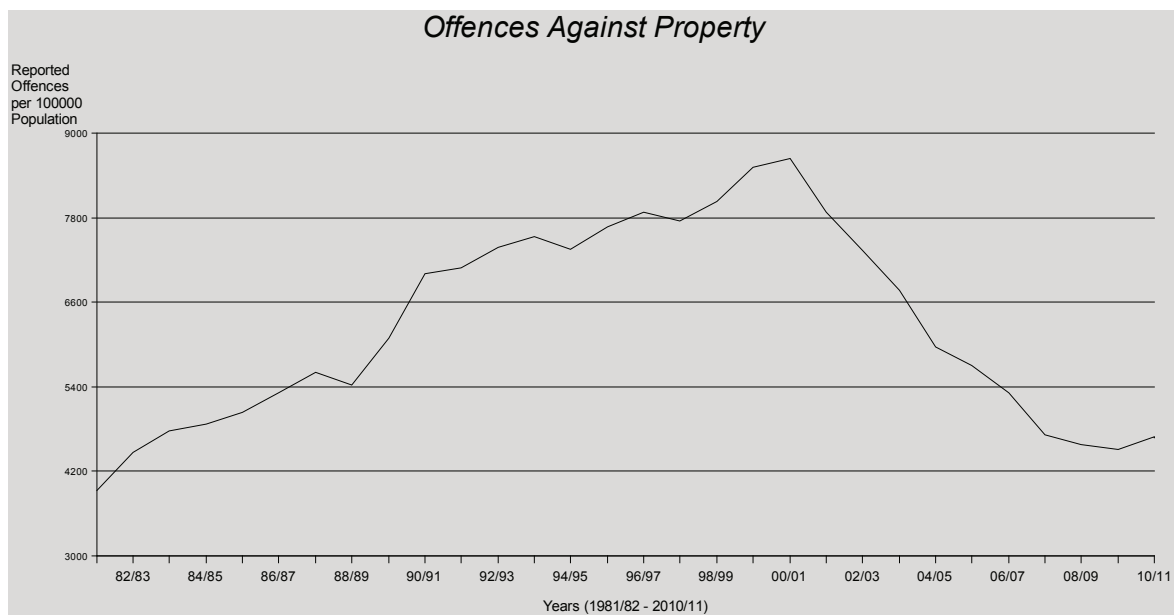

fluctuations seen in the graph above. Queensland recorded a decrease of 9% in the rate of sexual offences in the year under review compared with the previous year.

Annual Crime Trends

Robbery offences increased sharply between 1988/89 and 1998/99. Since then, the overall decreasing trend for robbery is apparent in the graph above. The rate of robbery offences

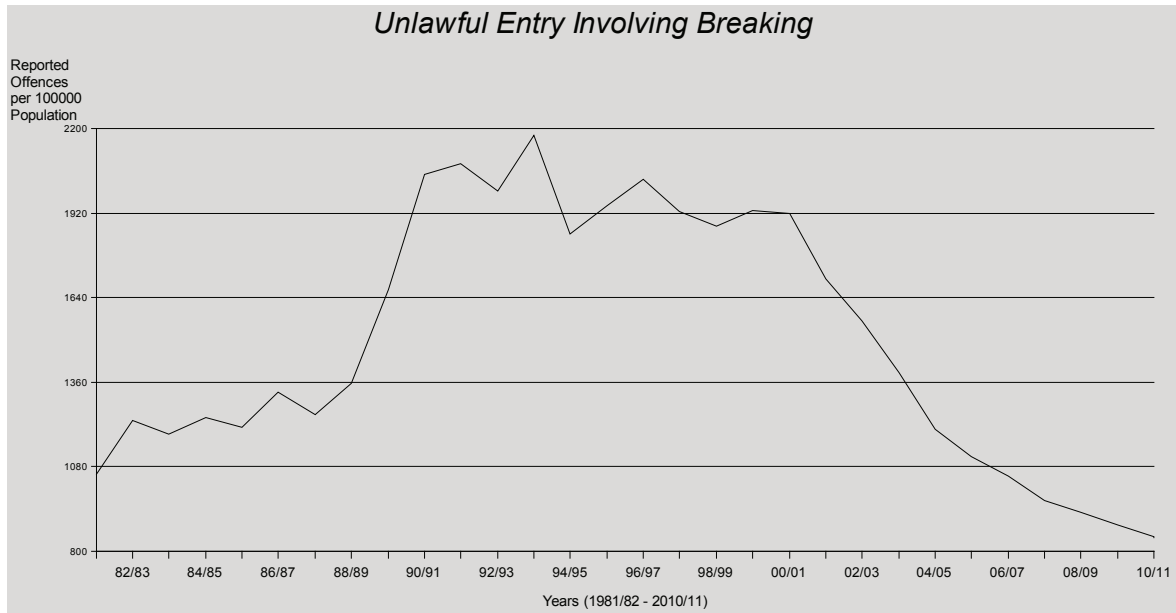

decreased by 3% in 2010/11. This is attributed to a decrease in the sub-category of unarmed robbery.

Offences against property increased steadily from 1981/82 to 1990/91, although a sharper increase in nearly all property offence sub-categories is reflected in the sharp increase seen from 1988/89 to 1990/91. From 1990/91 the rate increased slower than was seen previously. From 2000/01

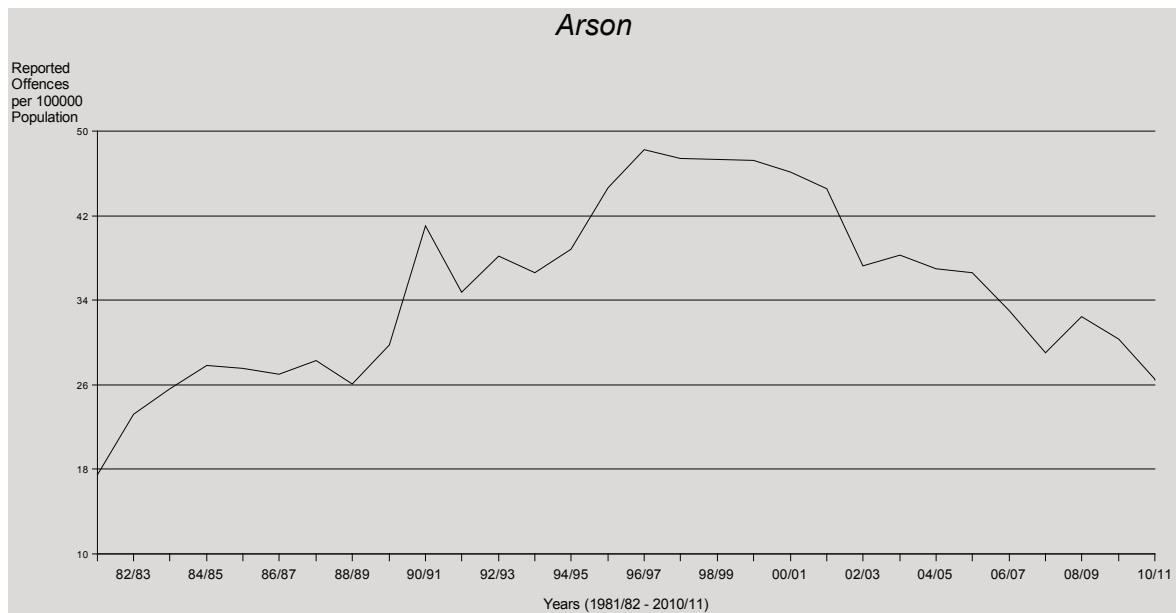

to 2009/10, total offences against property decreased. In 2010/11 total property crime increased by 4% as a result of increases in other property damage, unlawful use of motor vehicle, and other theft (excl. unlawful entry) offences.

Annual Crime Trends

Following a steady increase in unlawful entry involving breaking offences from 1981/82 to 1988/89, offences increased suddenly and sharply from 1988/89 to 1990/91. Throughout the 1990's the rate has stabilised and has recorded a

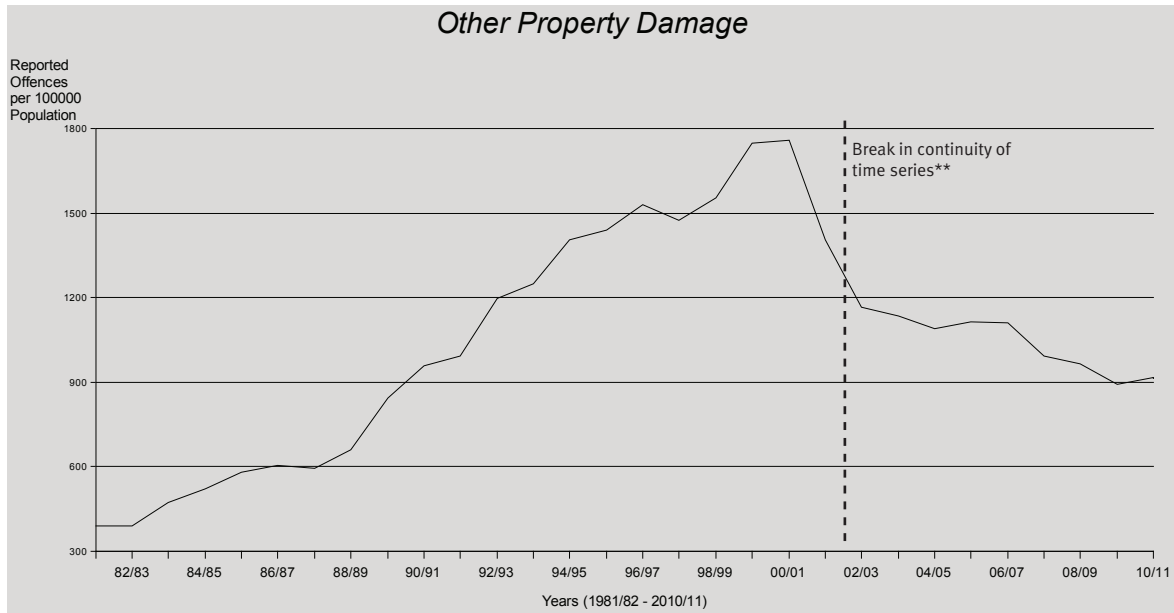

decreasing trend since 2000/01. In particular, the rate of unlawful entry involving breaking offences decreased by 4% in 2009/10, with a further fall of 3% in the current period under review.

Apart from the sharp increase in the late 1980's and the subsequent decrease in the early 1990's, arson offences have risen steadily up to 1996/97. Since then, the rate of arson offences has declined

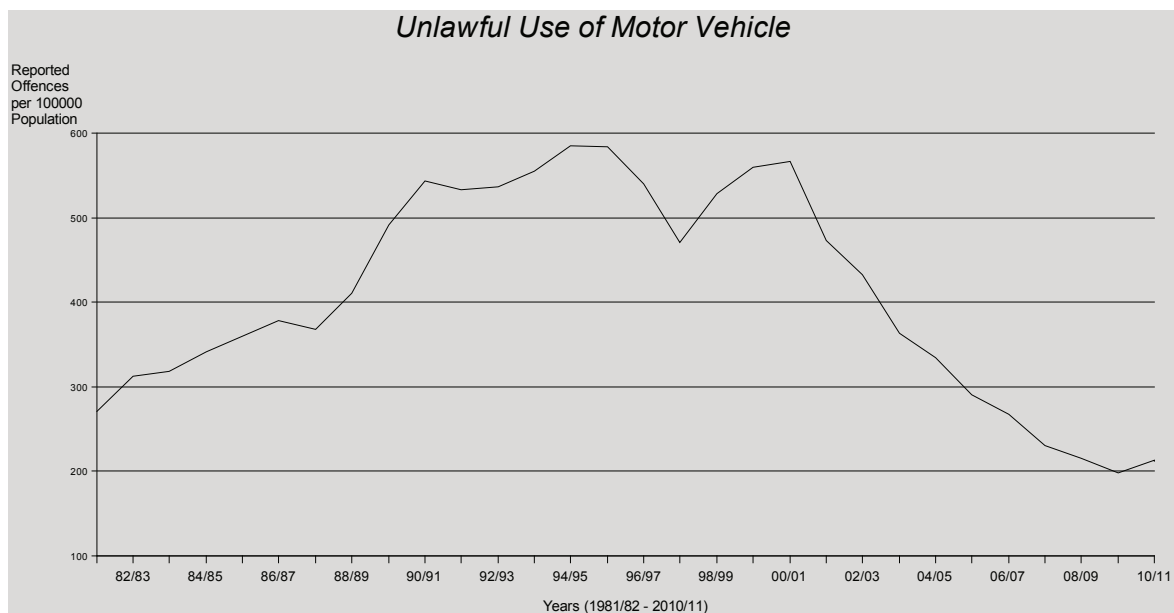

with the 2009/10 period reporting a decrease of 7% and the current financial year reporting a further decrease of 12%.

Annual Crime Trends

This offence category rose steadily up to 2000/01. Since then, other property damage offences have decreased at a sharp rate. A change in recording practices for this offence contributed to a 20%

decrease in the rate for 2001/02. The rate of other property damage offences has seen a slight increase this financial year reporting an increase of 3%.

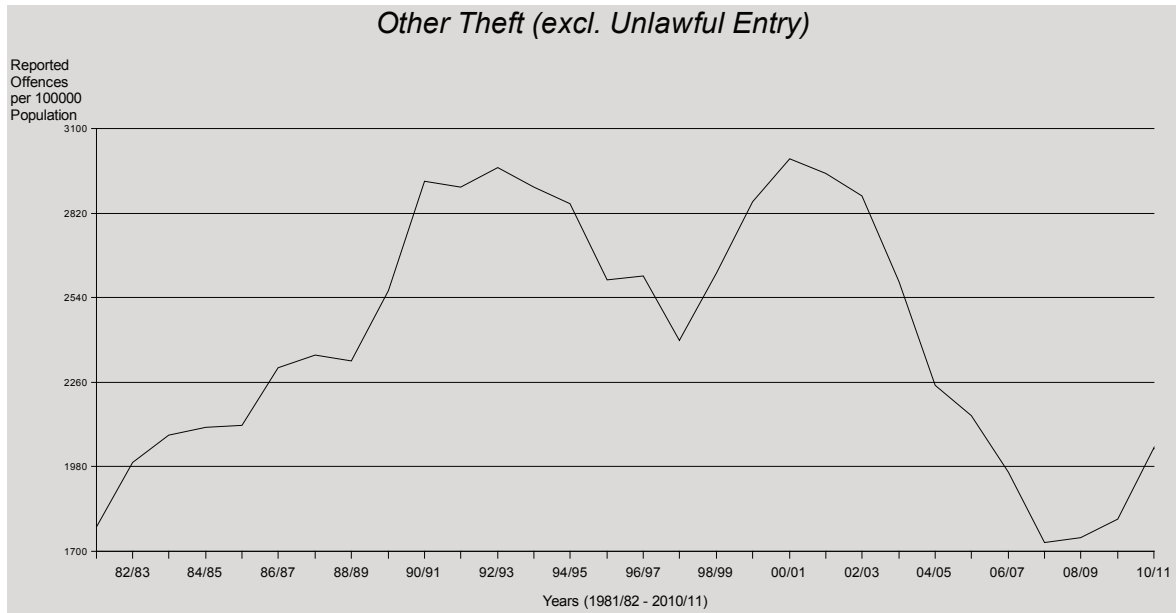

Unlawful use of motor vehicle offences recorded a substantial decrease over the period 1995/96 to 1997/98. Rates then rose sharply to again equal the high rates seen in the mid 1990's. From 2000/01, however, rates again declined. Since

2001/02, there has been a significant reduction in the rate of unlawful use of motor vehicle offences until 2009/10 with the current period recording an increase of 7%.

** The break in continuity is the result of a policy change implemented in December 2001 (see Explanatory Notes section).

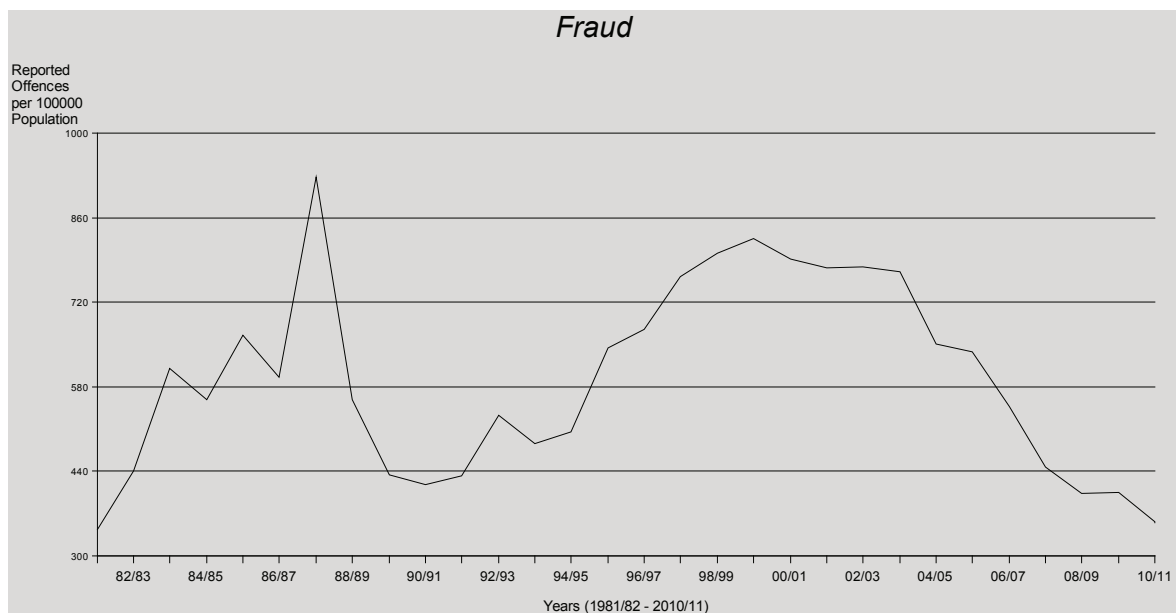

* The total for unlawful use of motor vehicle includes attempted offences

Annual Crime Trends

As with most offences against property sub-categories, the sharp increase recorded during the late 1980's is evident in the graph above and this sharp increase was repeated in the late 1990's. A decreasing trend in other theft (excl. unlawful

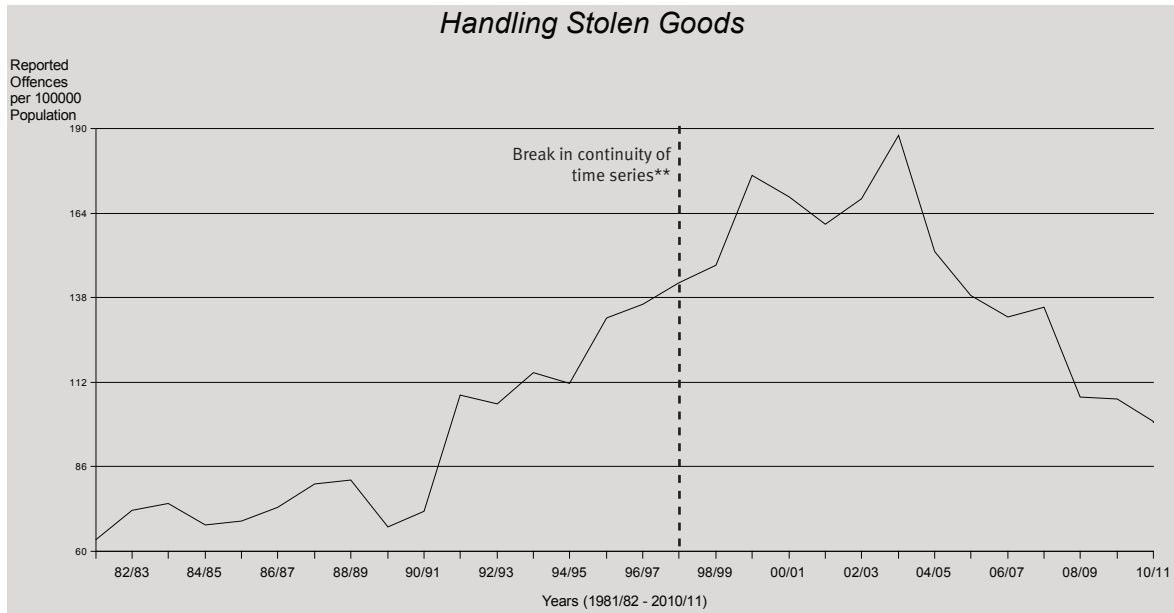

entry) offences was recorded from 2000/01 to 2007/08. However, the last three financial years showed a reverse in this trend by recording increases of 2% in 2008/09 and 2009/10 and 12% in 2010/11.

Fraud offences increased sharply from 1981/82 to 1987/88. The sudden decrease from 1987/88 to 1990/91 is due to a change in policy by banking institutions regarding the reporting of offences, rather than an actual reduction in offences. The figures reported for 2000/01 and 2001/02

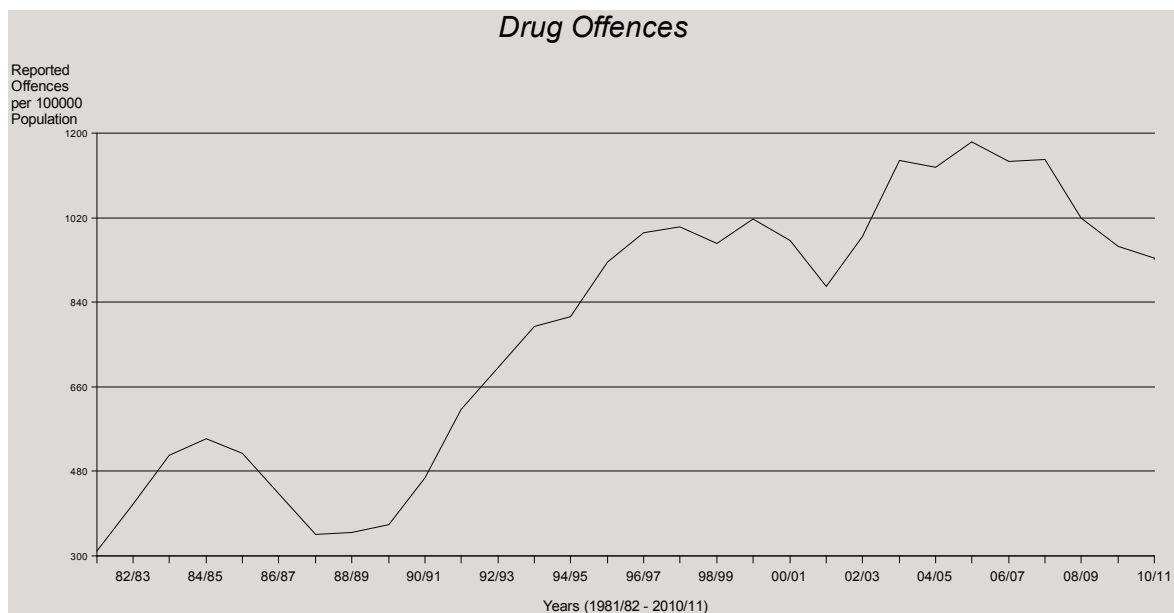

effectively halted a steadily increasing trend evident over the last decade. Rates recorded in each year from 2002/03 to 2010/11 have continued this reversal with a 12% decrease reported for the year under review.

Annual Crime Trends

Handling stolen goods was expanded in 1997/98 to include the sub-categories possess, receive, etc. tainted property and other handling stolen goods**. possess, receive, etc. tainted property is now the largest in volume of the offence sub-

categories resulting in the necessity for caution when making comparisons prior to and following this change. In the year under review, the rate of offences decreased by 6%.

Apart from a period in the mid to late 1980s, possibly due to the reallocation of police resources resulting from the Fitzgerald Inquiry, drug offences steadily increased up to 1999/00. Following a sharp increase from 2001/02 to

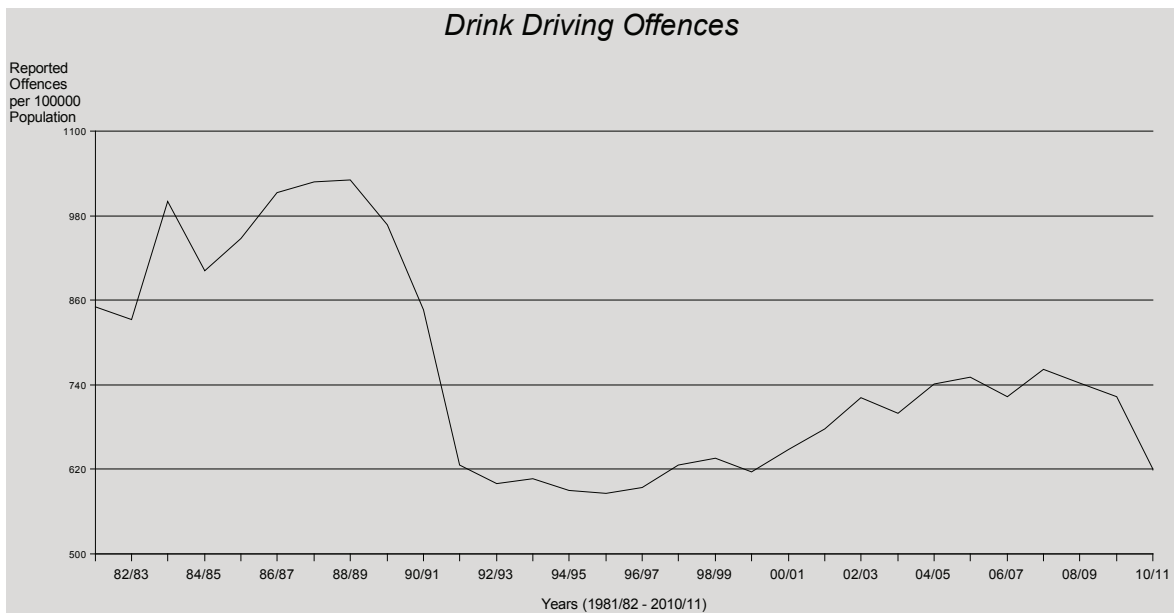

2003/04 the trend has remained relatively steady until 2007/08 where a decreasing trend can be seen in the graph. The current period under review has recorded a decrease of 2% in the rate of drug offences.

Annual Crime Trends

A dominant feature of the time series is the decrease in reported good order offences from 1988/89 to 1991/92 and the subsequent increase following that period. Since 1995/96,

good order offences have been steadily increasing until 2009/10. 2010/11 however reversed this trend and reported a decrease 11%.

Analysis of the drink driving offence time series is difficult due to the many changes that have affected the overall trend (see Explanatory Notes, page 165). The graph above highlights the effectiveness of these initiatives as offences

have reduced and remained stable at around 600 offences per 100,000 persons from 1991/92 to 2000/01. In the current reporting period, a decrease of 14% was reported, following a decrease of 4% in 2009/10.

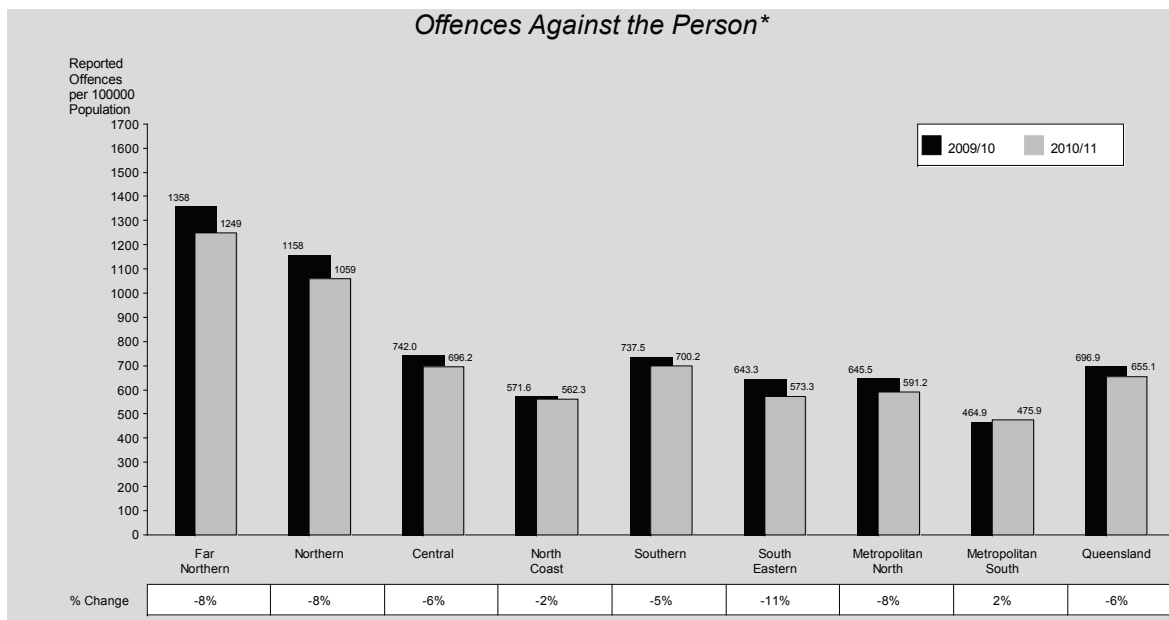

Regional Comparisons

The graphs in this section display changes in the rate of selected offences per 100,000 population from the 2009/10 to the 2010/11 financial years for Queensland Police Service regions.

The benefits of these graphs are twofold - the crime level of a region can be compared both with its own level in the previous financial year, and, secondly, with the crime levels of other regions. It should, however, be noted that each region faces unique policing issues. These graphs should

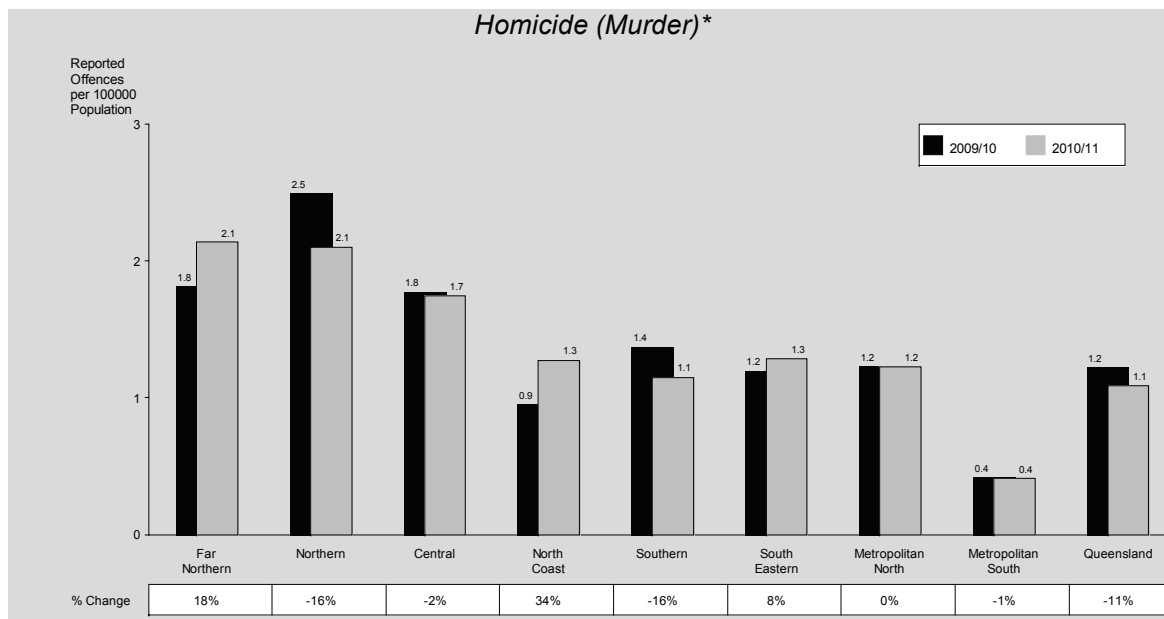

not, therefore, be used as a comparative measure of regional performance, but rather as a guide to crime trends and patterns across the State.

As with the rest of this Review, the offences per 100,000 persons calculations were performed using the Estimated Residential Population for 30 June each year, or a projection thereof, provided by the Australian Bureau of Statistics and the Office of Economic and Statistical Research, Queensland.

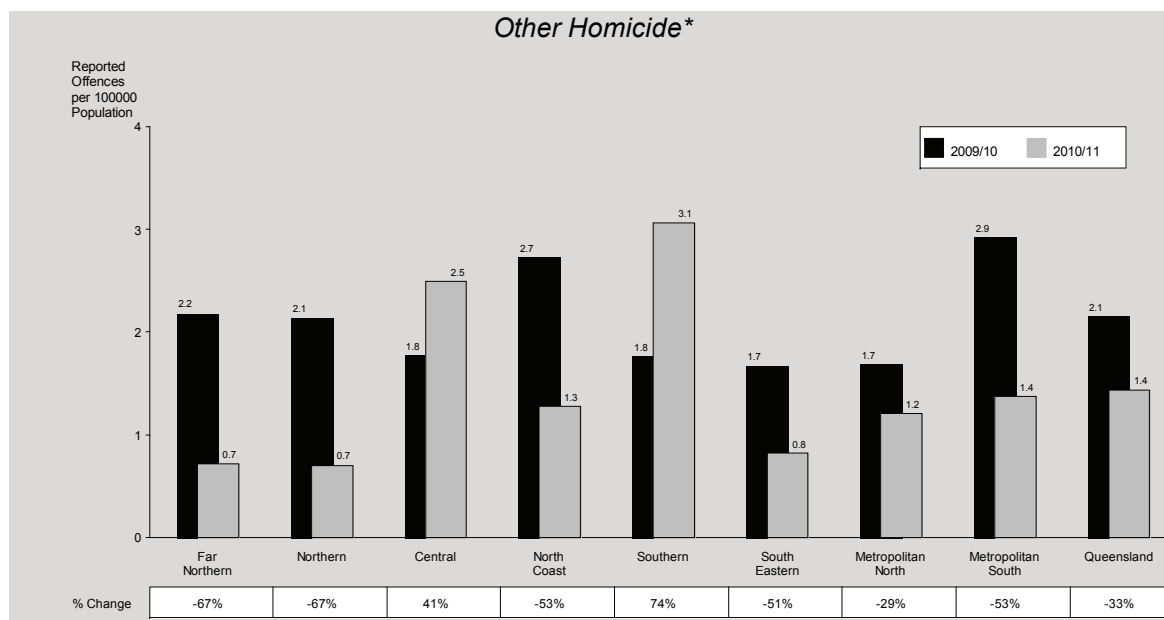

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Homicide (murder) is a small volume offence and, as such, is subject to substantial fluctuations over areas and across time. Thus, caution should be exercised when using percentage changes as a measure of change from one year to the next. Metropolitan South Region recorded the lowest

rate while Far Northern and Northern Regions recorded the highest rates. The largest increase was recorded by North Coast Region and the greatest decreases were recorded by Northern and Southern Regions.

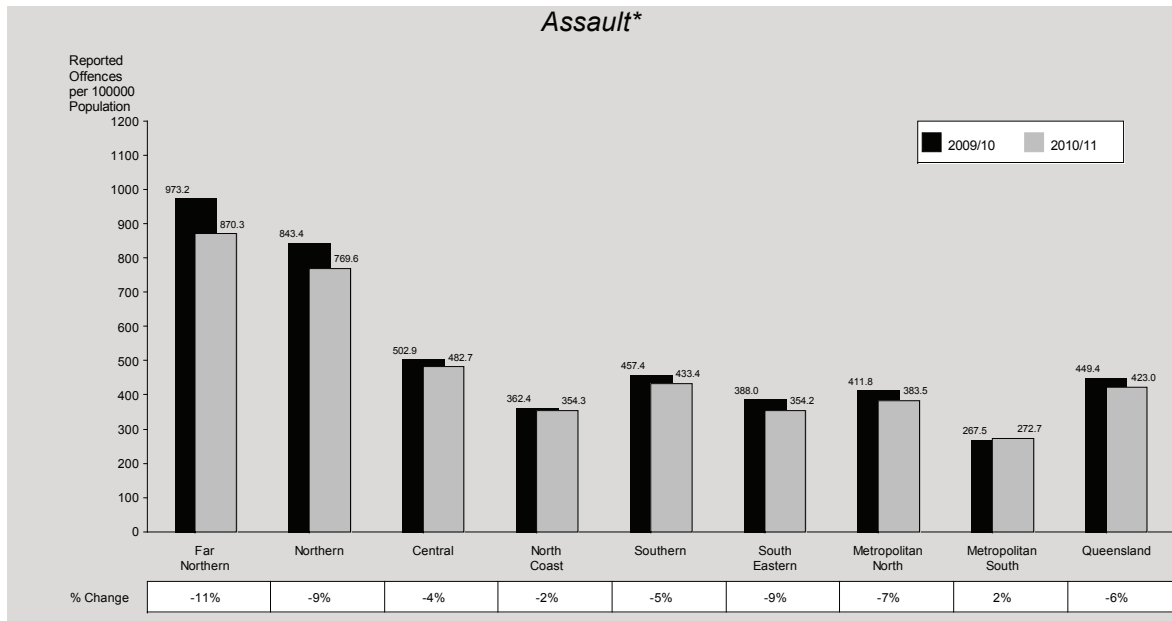

Other homicide is also a small volume offence category and, as such, is subject to marked fluctuations from one year to the next and from one area to the next. As with homicide (murder), caution should be exercised when using

percentage change as a measure of change from one year to the next. In 2010/11 Southern Region recorded the highest rate of other homicide while Far Northern and Northern Region recorded the lowest.

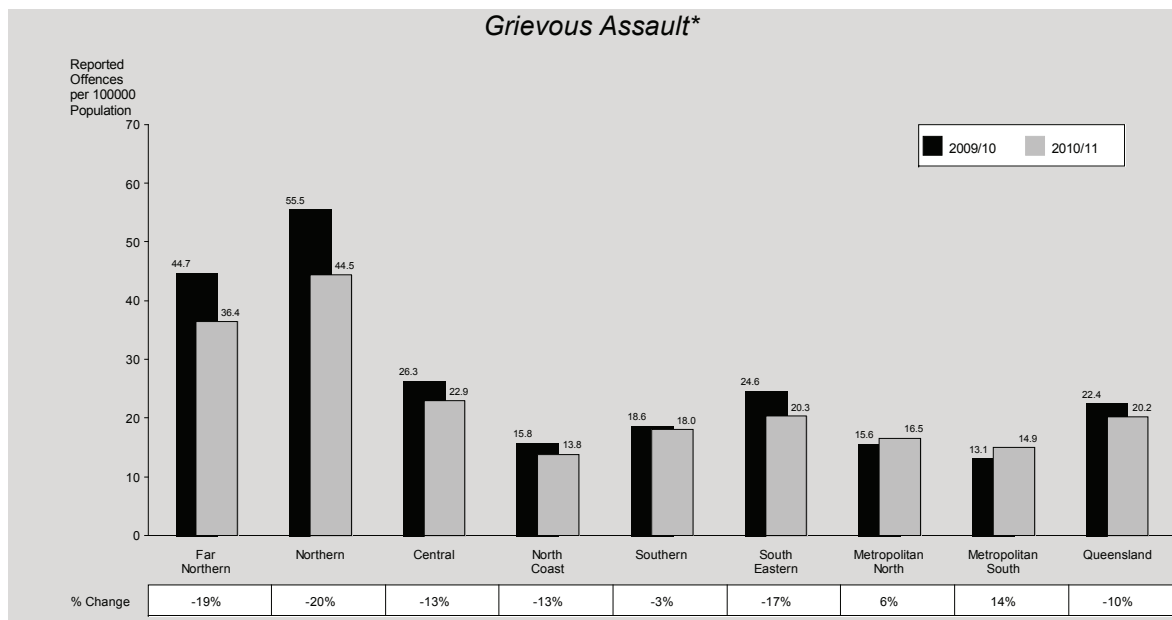

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Far Northern and Northern Regions recorded higher rates than the remaining regions, all of which recorded similar assault rates in 2010/11.

Metropolitan South Region recorded the lowest rate and also recorded the only increase.

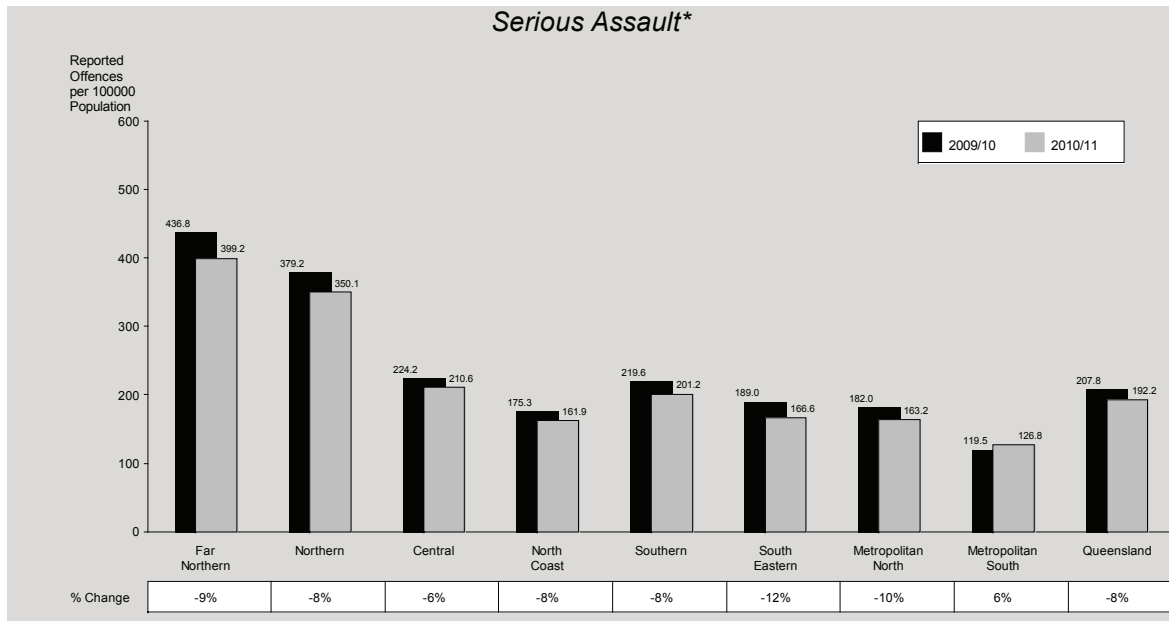

It should be noted this is a low volume offence category and, as such, is subject to marked fluctuations from one year to the next. Far Northern and Northern Regions recorded the

highest rates despite recording the largest decreases of 19% and 20% respectively. North Coast Region recorded the lowest rate.

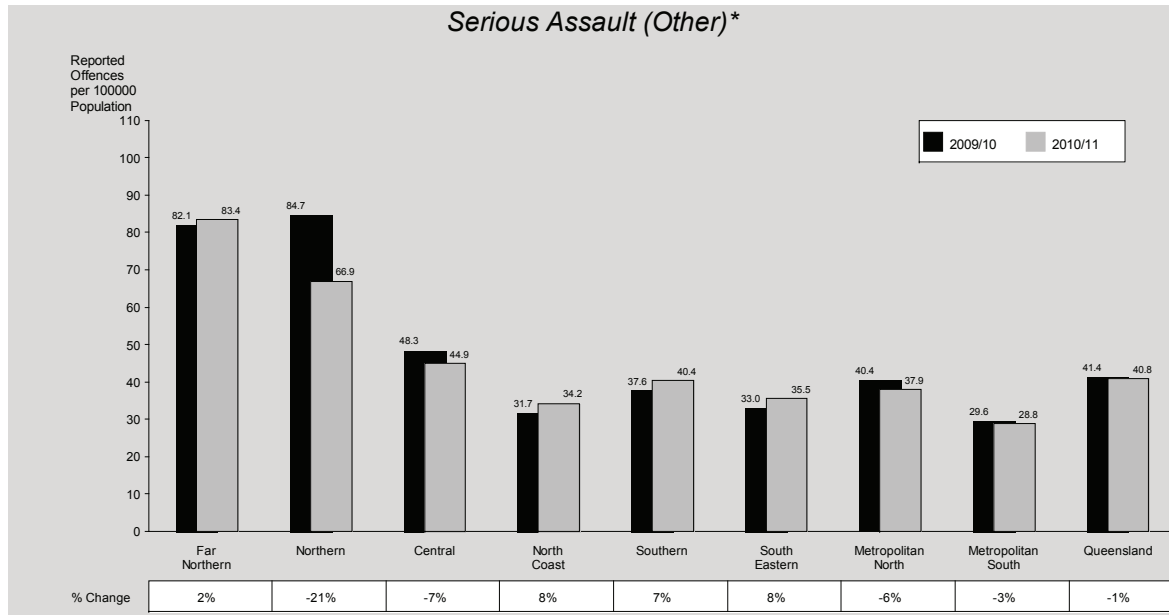

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Far Northern and Northern Regions have the highest rates of serious assaults in the State.

Metropolitan South Region continues to record the lowest rate in the State.

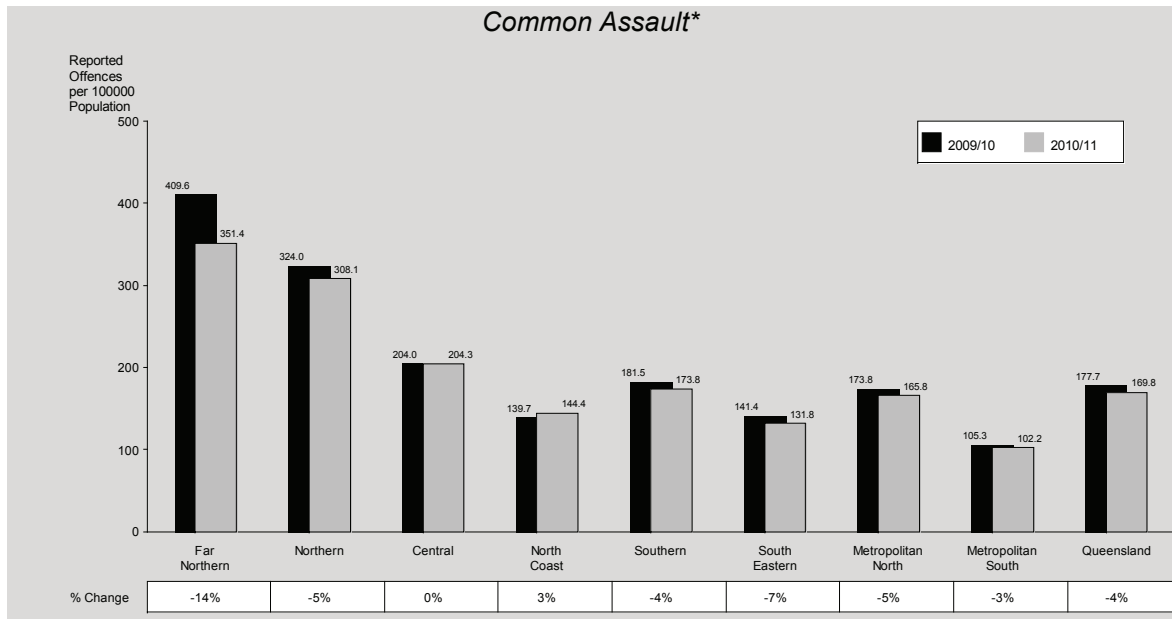

Far Northern and Northern Regions recorded the highest rates of serious assault (other) offences despite Northern Region recording the

highest decrease in the rate of offences this year. Metropolitan South Region recorded the lowest rate for the current review period.

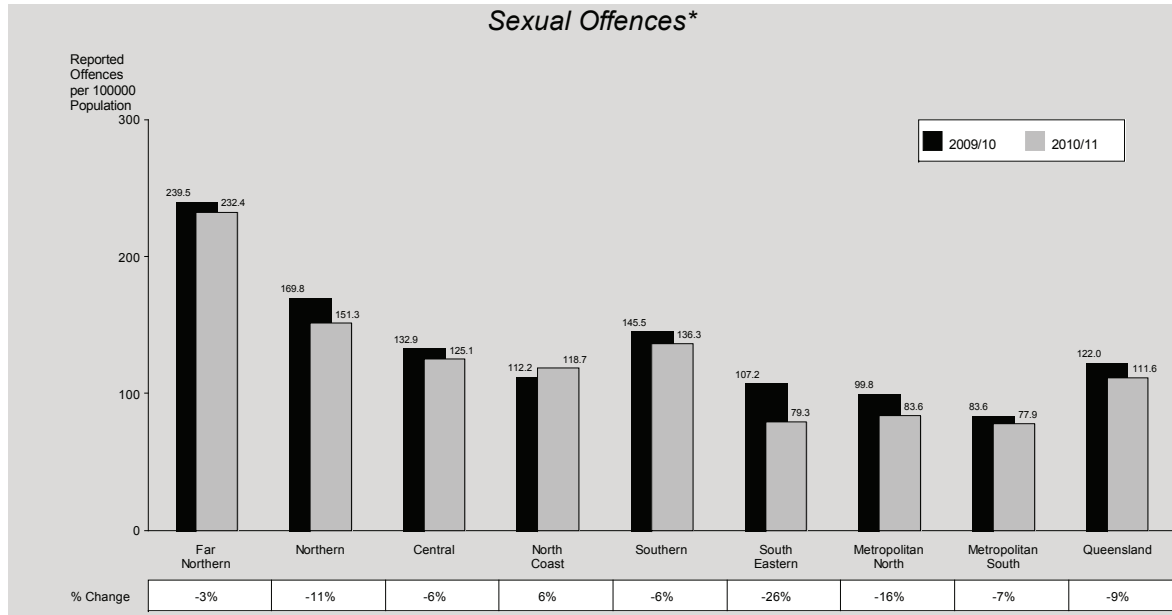

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Far Northern Region recorded the largest decrease in common assault however also recorded the highest rate. Decreases in common assault were

recorded by six of the eight regions in 2010/11. Metropolitan South Region again recorded the lowest rate in the State.

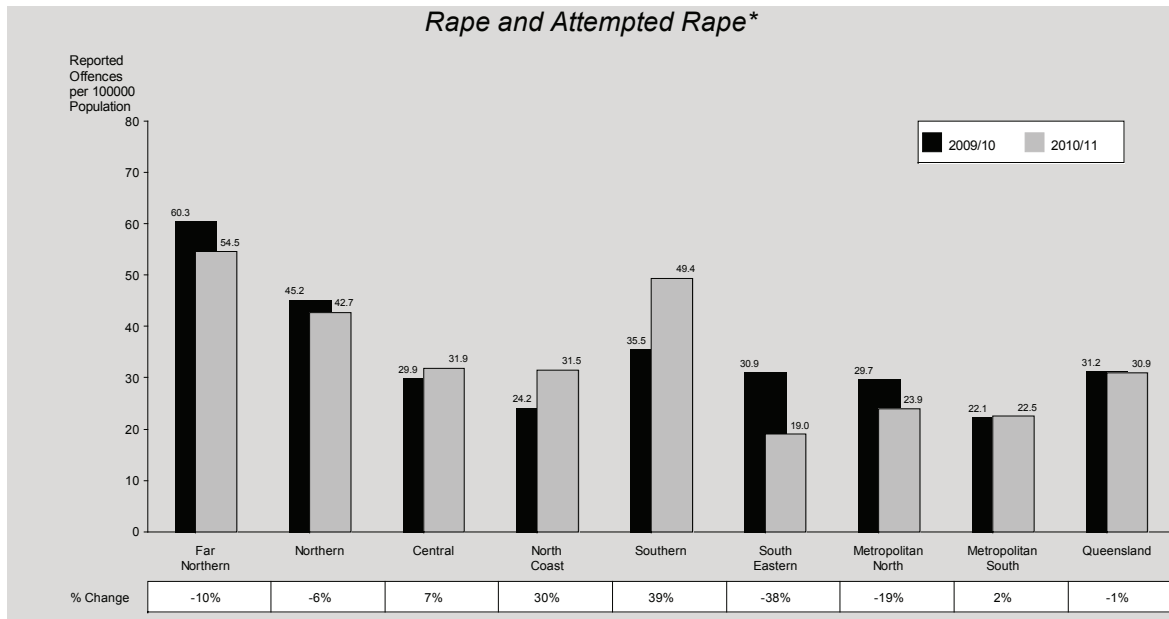

Far Northern Region recorded the highest rate of sexual offences whilst the lowest rate was recorded in Metropolitan South Region. South

Eastern Region recorded the greatest decrease and North Coast Region recorded the only increase.

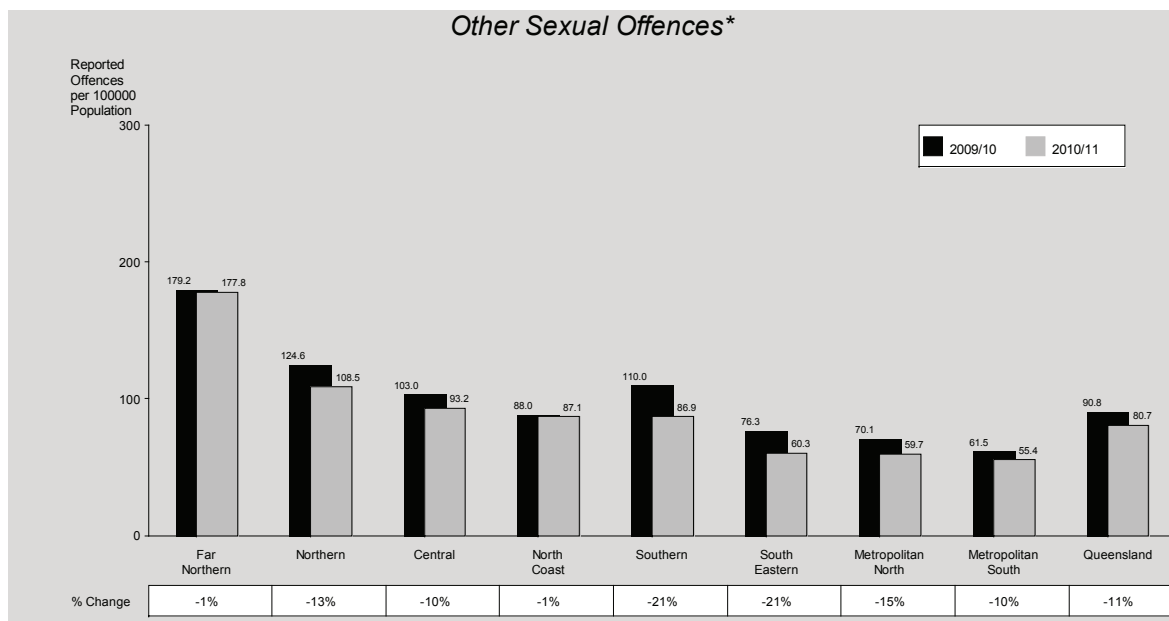

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Decreases in rape and attempted rape offences were recorded by four of the eight regions with Queensland recording a 1% decrease in the period under review. The highest rate was recorded by Far

Northern Region while the lowest rate of rape and attempted rape was recorded by South Eastern Region.

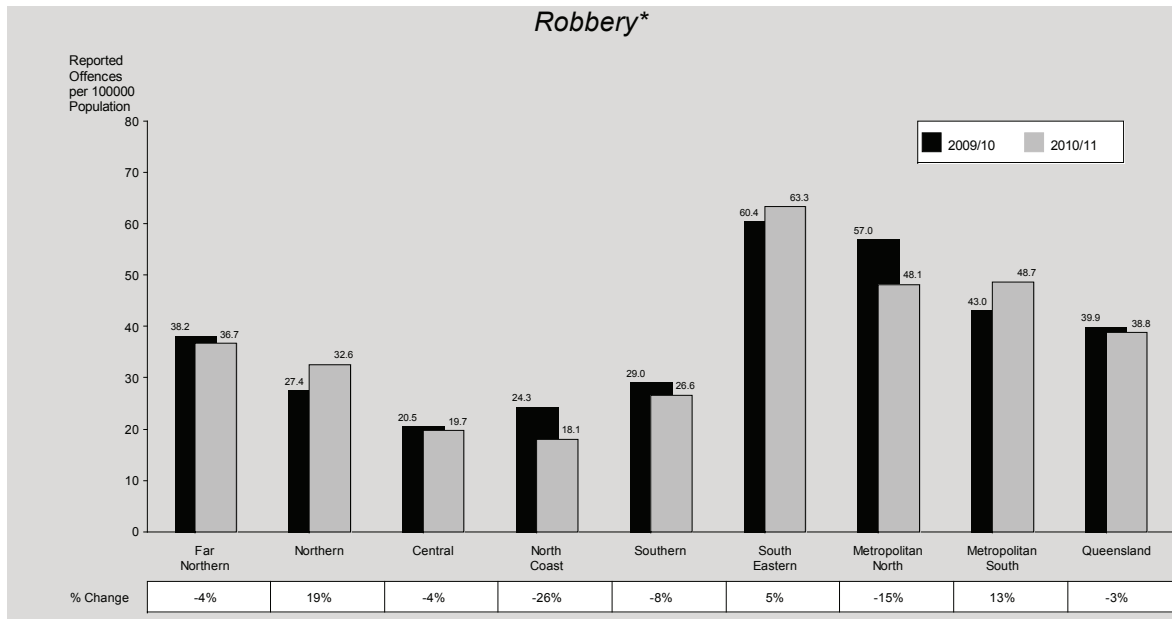

The highest rate was recorded by Far Northern Region whilst the lowest rate was recorded by Metropolitan South Region. All of the eight

Regions recorded decreases with South Eastern and Southern Regions recording the largest decreases of 21% in the period under review.

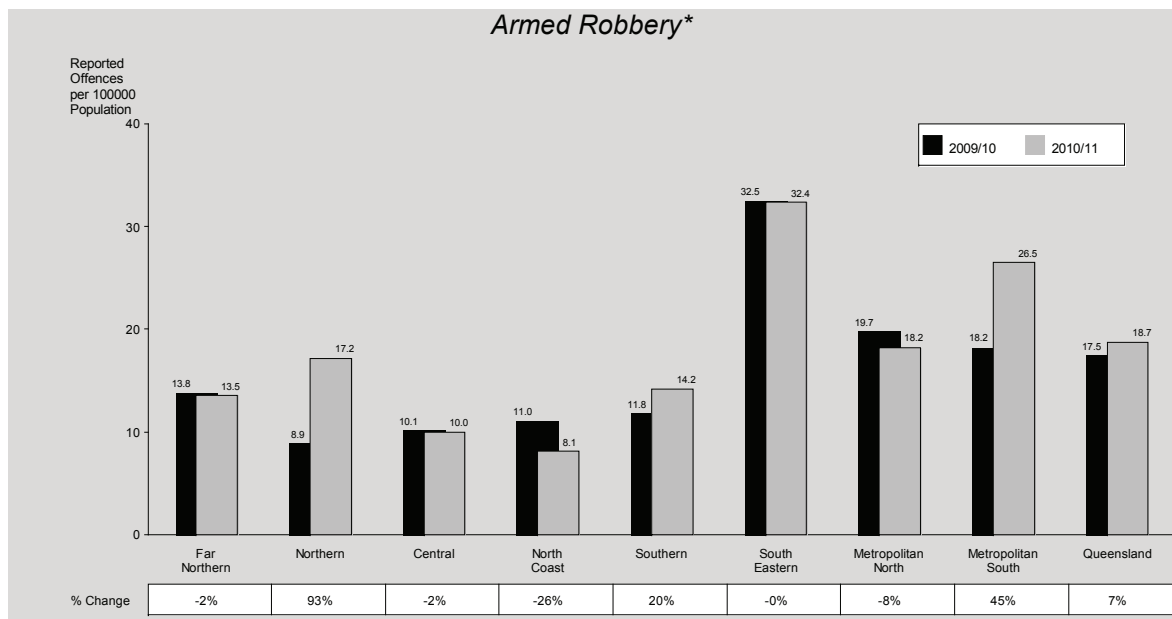

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

The south-east corner of the State typically records the highest rates of robbery and 2010/11 was no exception. South Eastern Region recorded the

highest rate of 63 per 100,000 persons. Northern Region recorded the largest increase whilst North Coast Region recorded the greatest decrease.

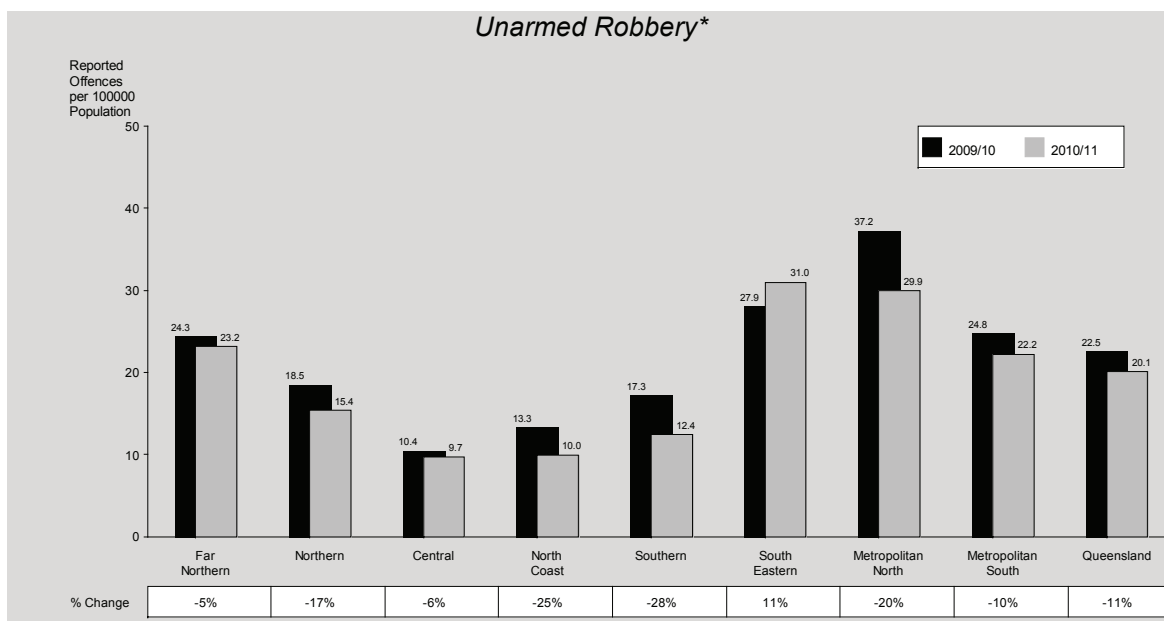

The south-east corner again recorded higher rates of armed robbery compared with the rest of the State. Four of the eight regions recorded decreases in armed robbery offences with North Coast Region recording the greatest decrease. South

Eastern Region recorded the highest rate, however recorded no change in rate when adjusted for population growth. North Coast Region recorded the lowest rate of 8 offences per 100,000 persons.

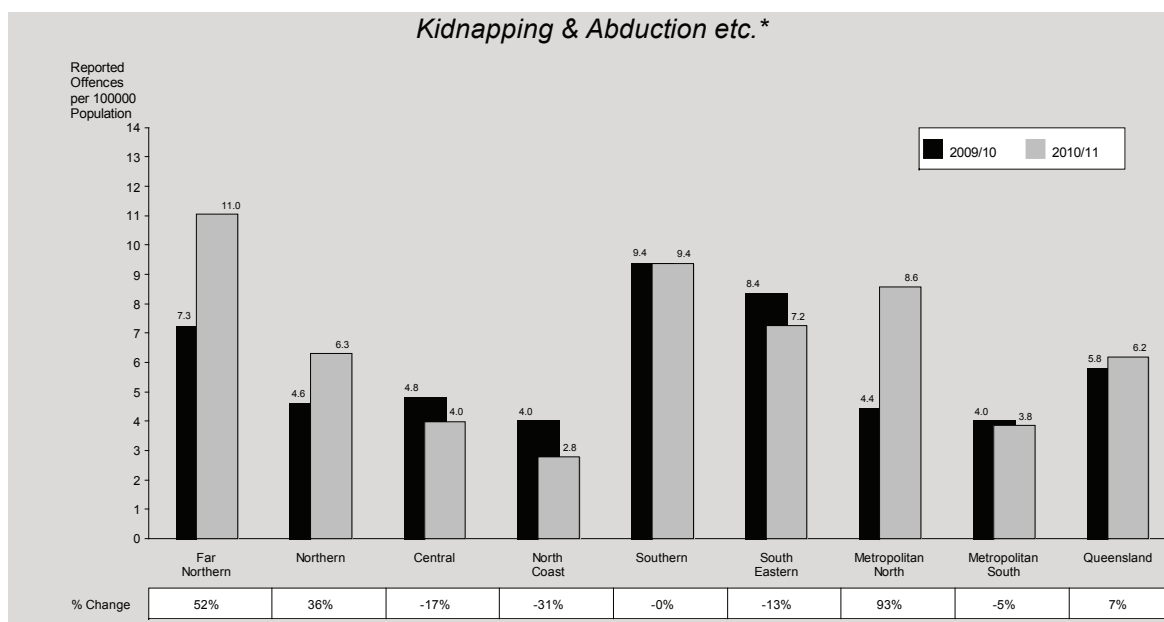

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

South Eastern Region recorded the highest rate of unarmed robbery and Central Region recorded the lowest. South Eastern Region recorded the

only increase while Southern Region recorded the largest decrease of unarmed robbery offences in the period under review.

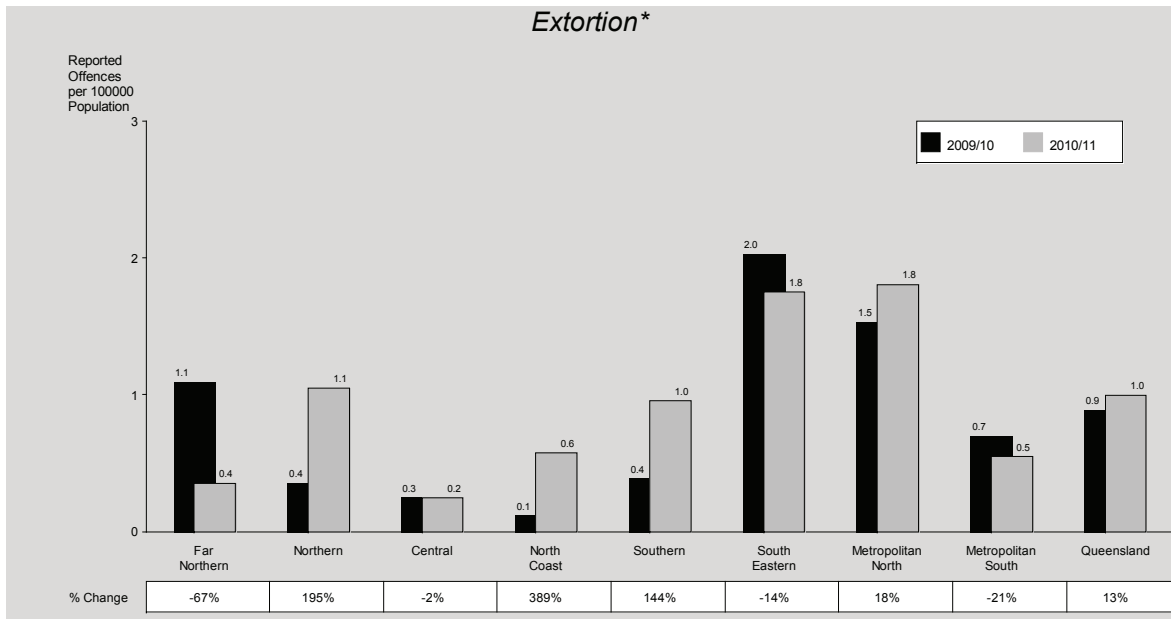

The highest rate of kidnapping and abduction etc. offences occurred in Far Northern Region with the largest increase being recorded by Metropolitan

North Region. North Coast Region recorded the largest decrease of 31% as well as the lowest rate per 100,000 persons.

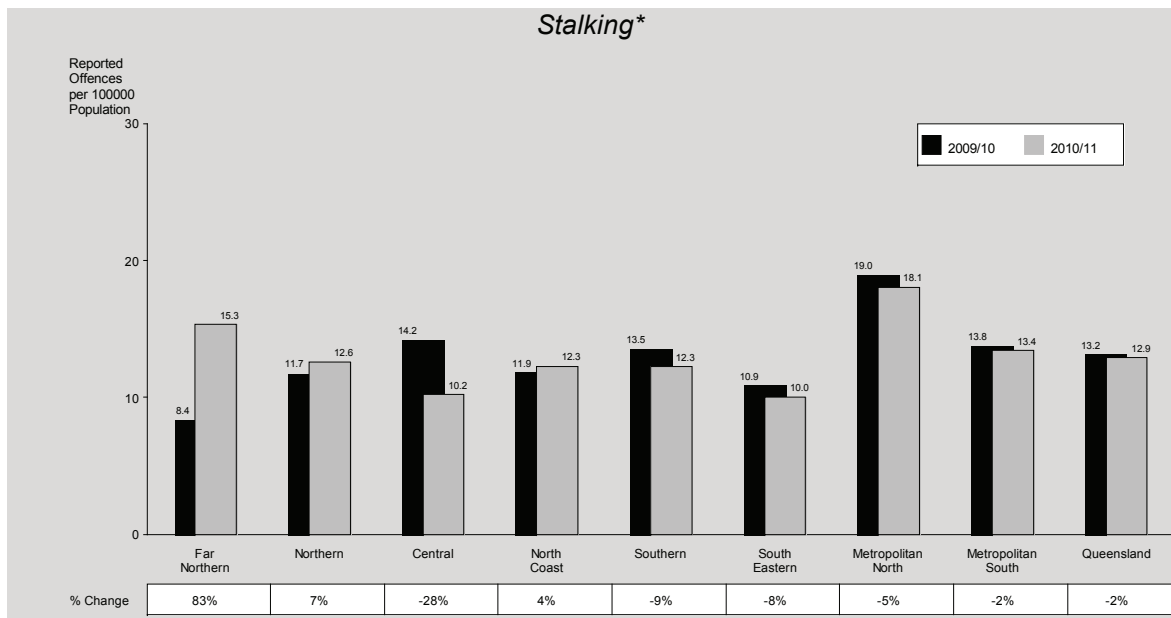

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Extortion is a low volume offence category and is, therefore, subject to marked fluctuations from area to area and from one year to the next. In 2010/11 North Coast Region recorded the highest increase in extortion offences. Far Northern

Region recorded the largest decrease of 67%. The highest rate was recorded by South Eastern and Metropolitan North Region while the lowest rate was recorded by Central Region.

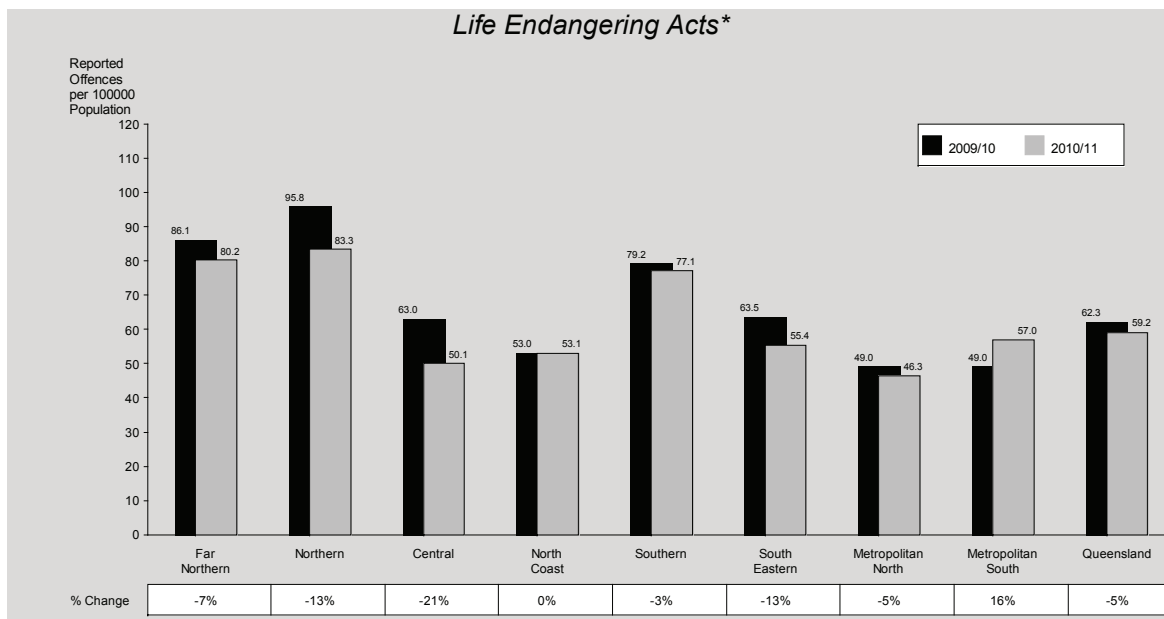

Five of the eight regions recorded a decrease in stalking offences the largest of which was a 28% decrease in Central Region. Metropolitan North

Region recorded the highest rate while the lowest rate occurred in South Eastern Region.

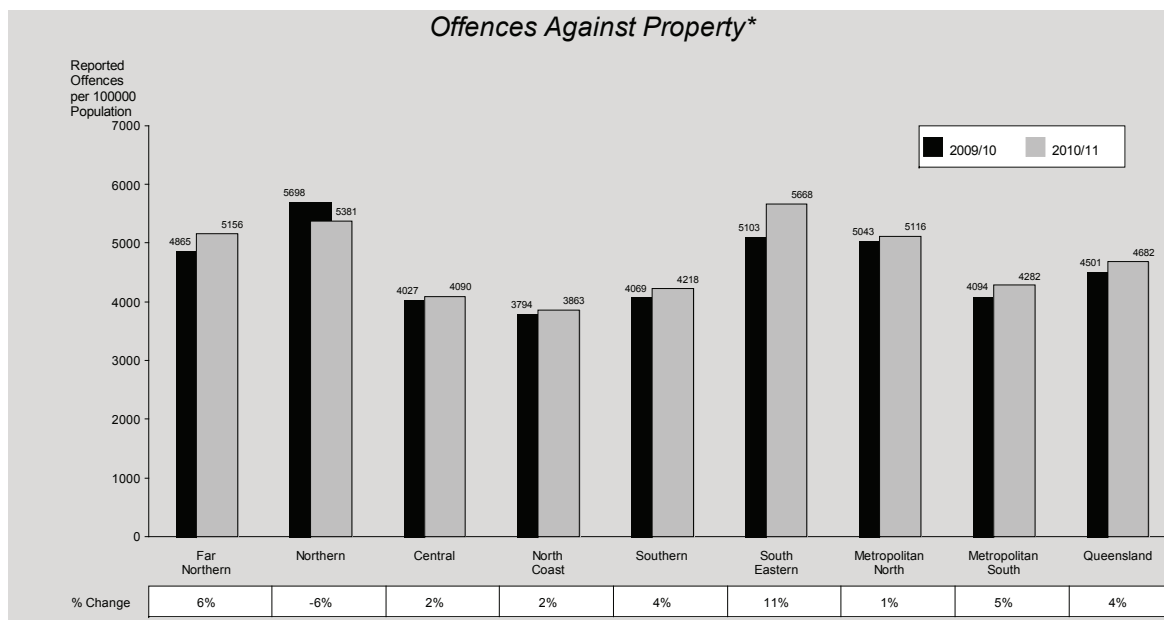

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Northern Region recorded the highest rate of life endangering acts offences and Metropolitan North Region recorded the lowest rate. The largest

increase of 16% occurred in Metropolitan South Region whilst Central Region recorded the greatest decrease in the 2010/11 period.

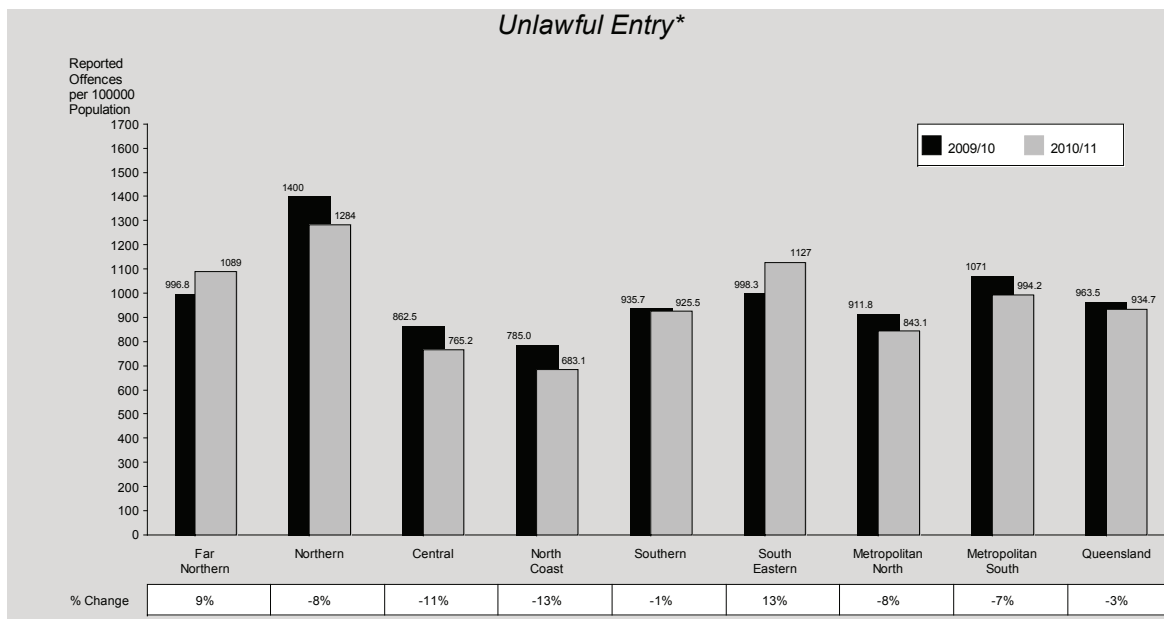

Northern Region was the only region to record a decrease in total offences against property. South Eastern Region recorded the highest rate as well

as the greatest increase. North Coast Region recorded the lowest rate.

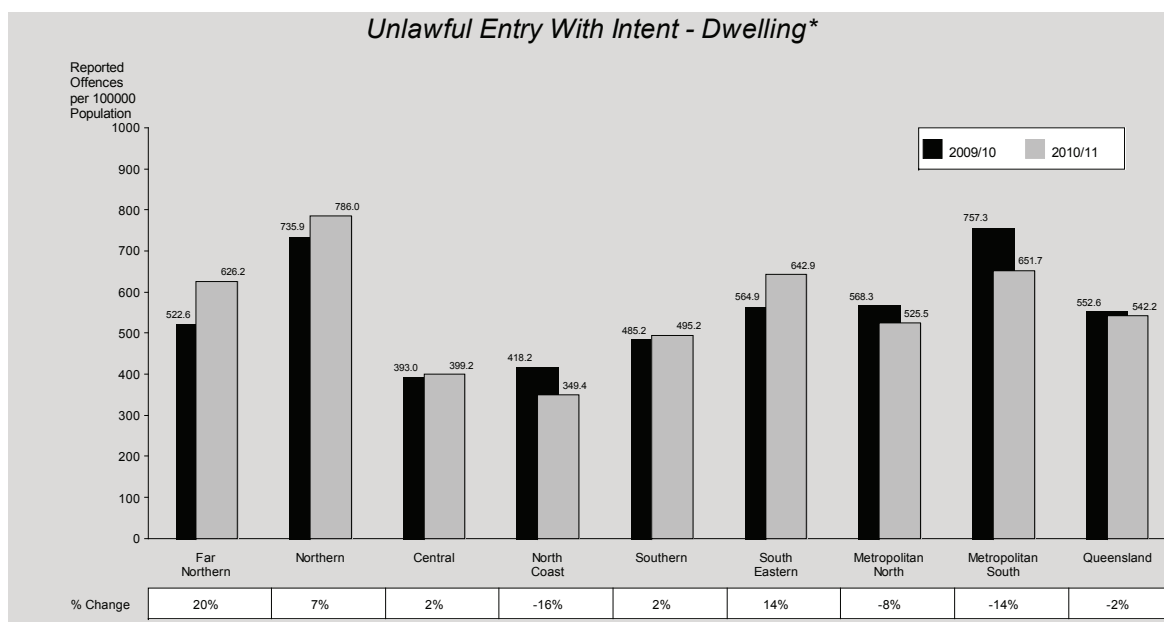

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Unlawful entry tends to dominate the offences against property aggregate as is evidenced by the similarity in the distribution of property crime. Six of the eight regions recorded decreases in the current year. South Eastern Region recorded the

largest increase and Northern Region recorded the highest rate. North Coast Region reported the largest decrease which resulted in North Coast Region recording the lowest rate.

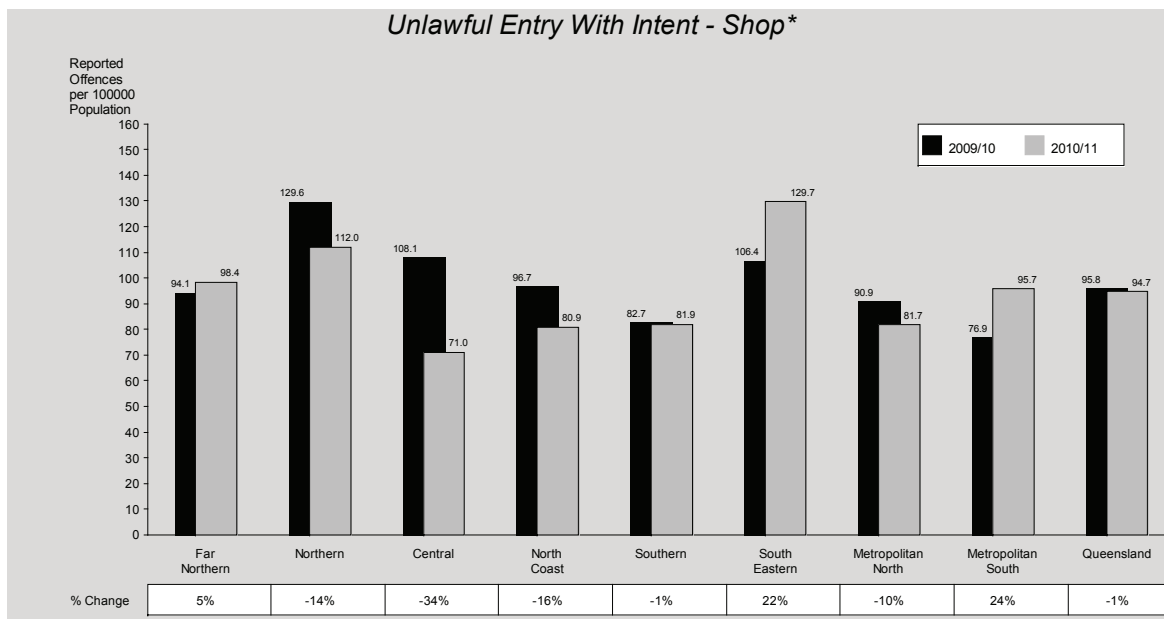

The largest increase in the rate of unlawful entry - dwellings, occurred in Far Northern Region and Northern Region recorded the highest rate. The

lowest rate in the State occurred in North Coast, where the largest decrease was also recorded over the last financial year.

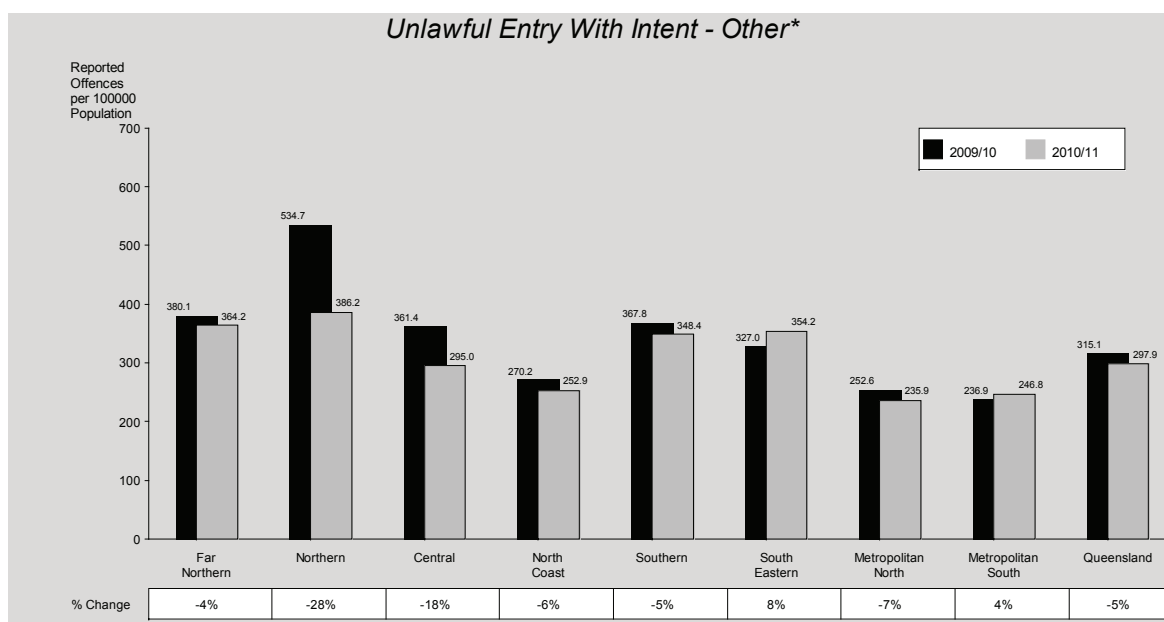

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Central Region recorded the largest decrease and the lowest rate for unlawful entry – shops offences. The highest rate was recorded by South

Eastern Region and Metropolitan South Region recorded the largest increase.

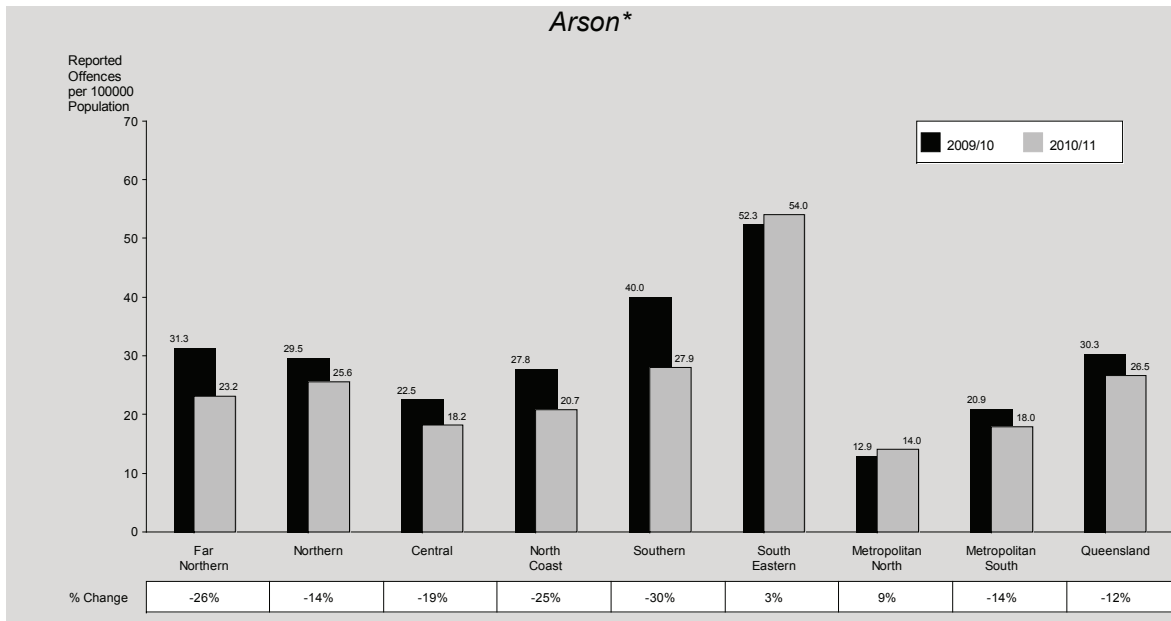

Six of the eight regions recorded decreases in unlawful entry - other premises offences which attributed to Queensland recording a 5% decrease when comparing 2010/11 with the previous year. Northern Region recorded the highest rate (386

offences per 100,000 persons) despite recording the largest decrease of 28%. Metropolitan North Region recorded the lowest rate (236 offences per 100,000 persons).

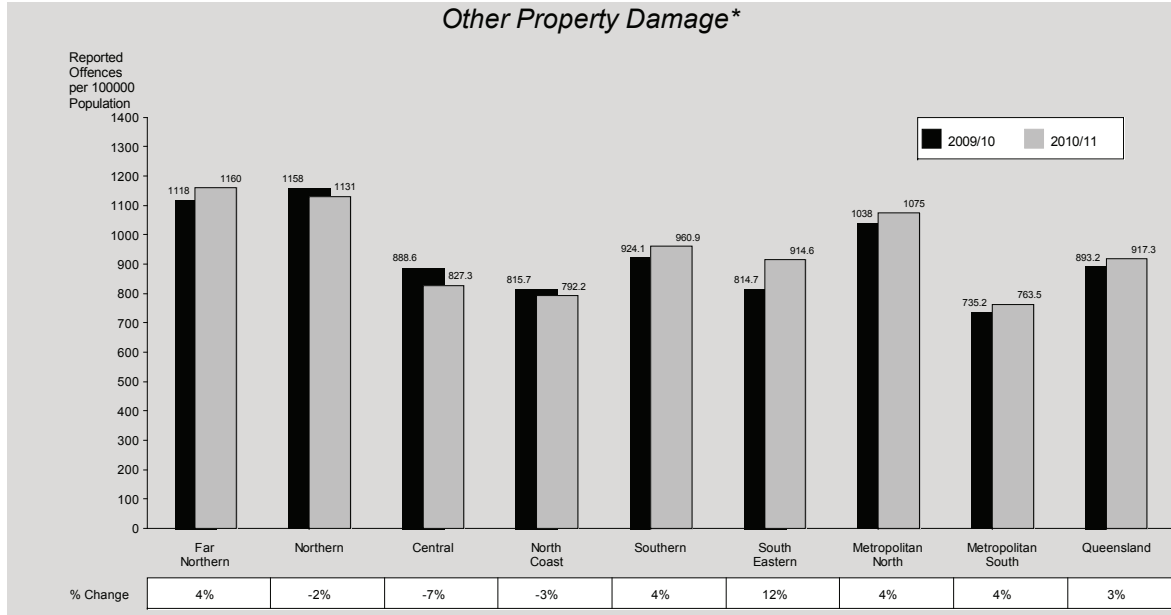

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Six regions recorded decreases in the rate of arson offences this year. Southern Region recorded the largest decrease. Metropolitan North Region

recorded the greatest increase, however also recorded the lowest rate. South Eastern Region recorded the highest rate.

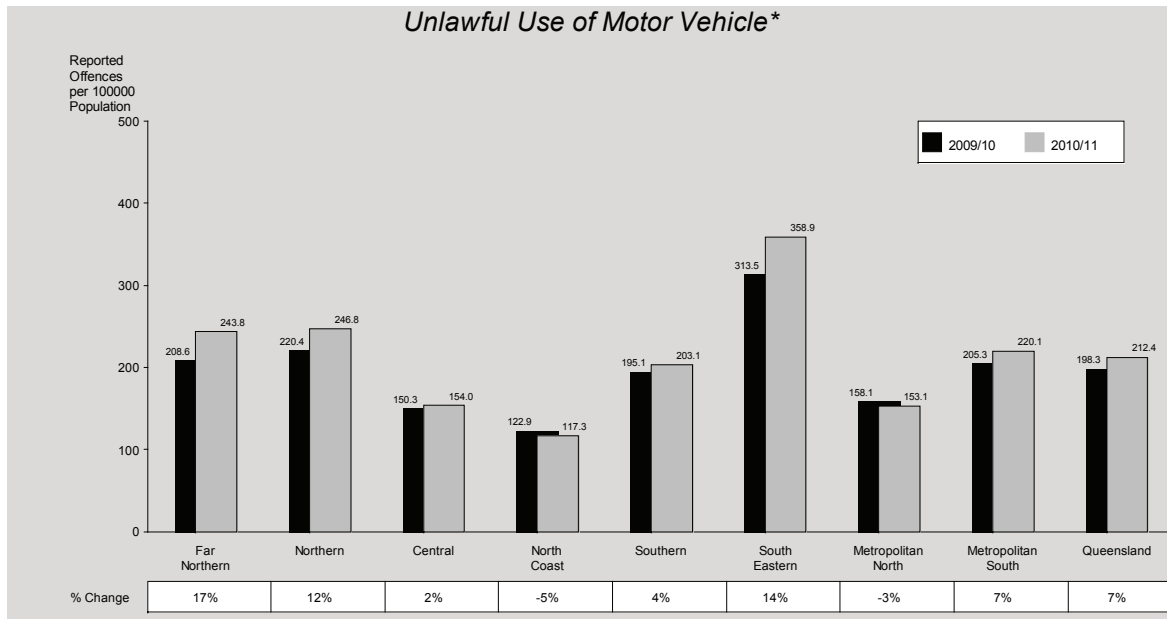

Increases in five of the eight regions resulted in the State recording an increase of 3% in other property damage offences over the 2010/11 period. The lowest rate was recorded by

Metropolitan South Region. The largest decrease was recorded by Central Region while the highest rate was recorded by Far Northern Region.

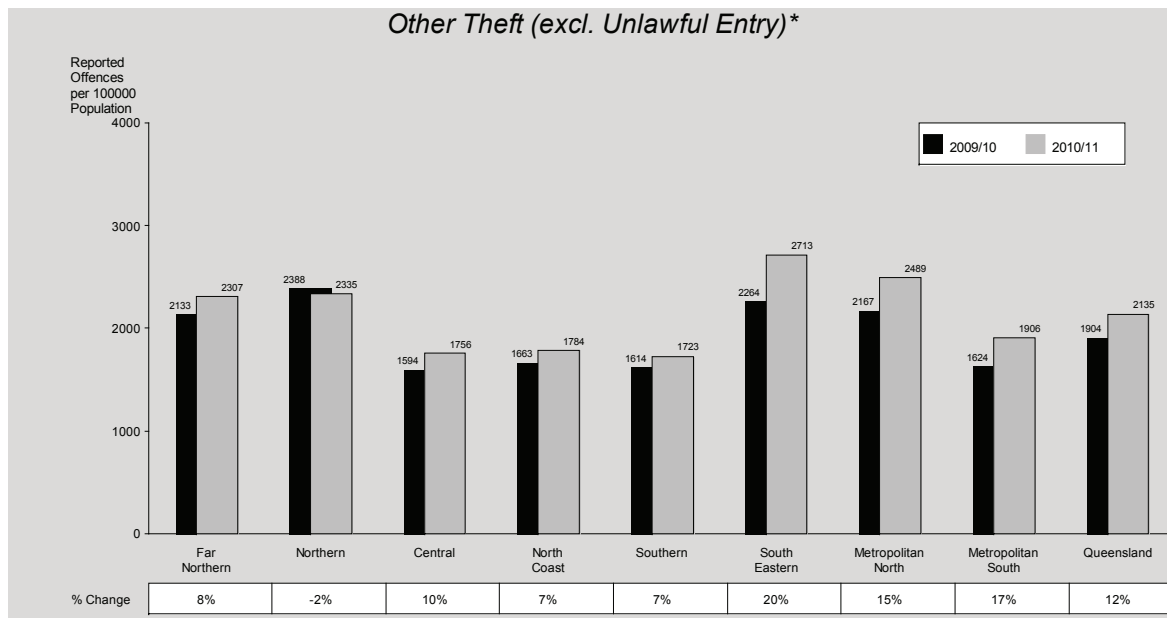

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Rates of unlawful use of motor vehicles recorded increases in six of the eight regions which resulted in Queensland recording a 7% increase in these offences in 2010/11. Decreases were recorded in North Coast and Metropolitan North Region,

with North Coast Region also recording the lowest rate. South Eastern Region recorded the highest rate and the largest increase was recorded by Far Northern Region.

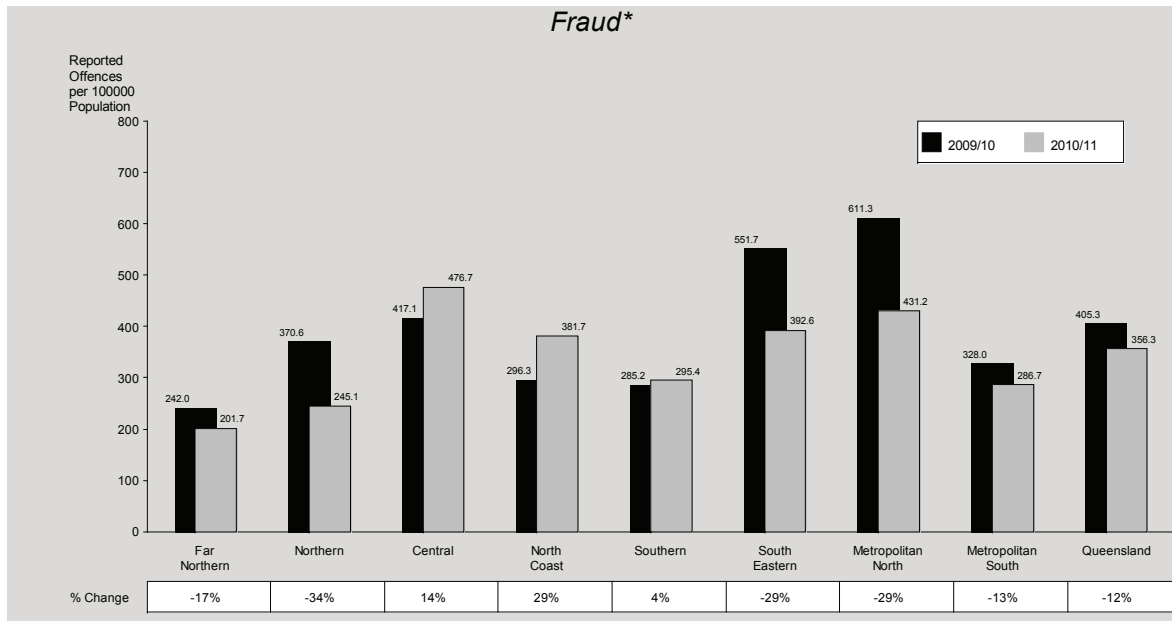

During 2010/11, seven out of eight regions recorded increases in other theft (excl. unlawful entry) offences, resulting in a 12% increase recorded by Queensland overall. The highest rate

of other theft occurred in South Eastern Region which also recorded the largest increase. Southern Region recorded the lowest rate while Northern Region recorded the only decrease.

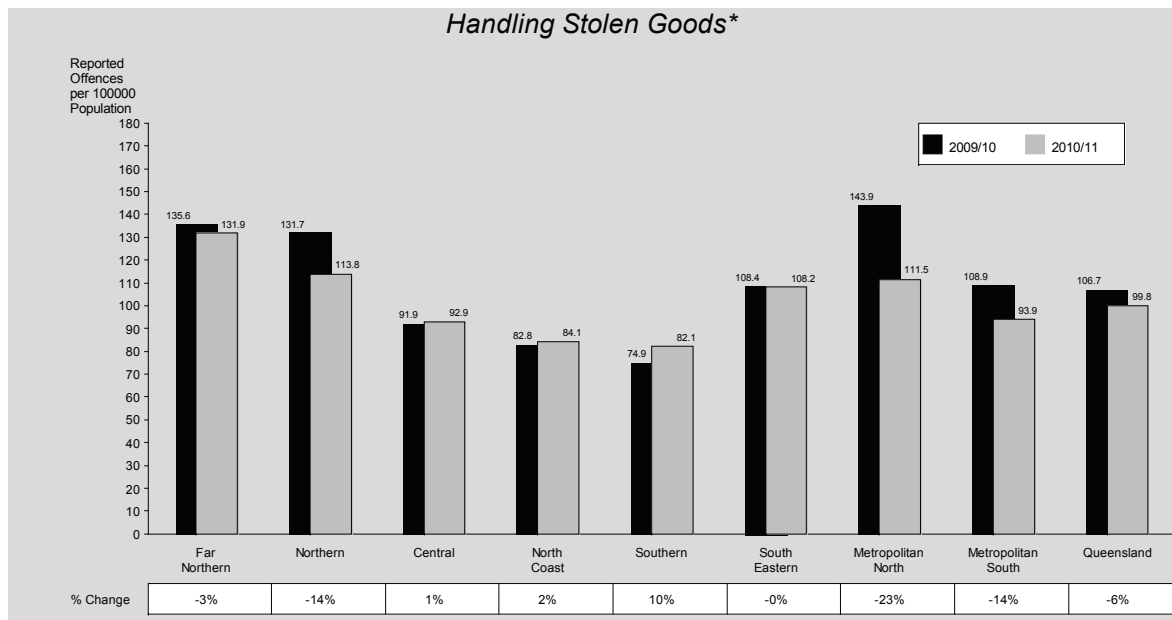

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Central Region recorded the highest rate of fraud offences in 2010/11 and North Coast Region recorded the highest increase. The largest

decrease was recorded by Northern Region and Far Northern Region recorded the lowest rate.

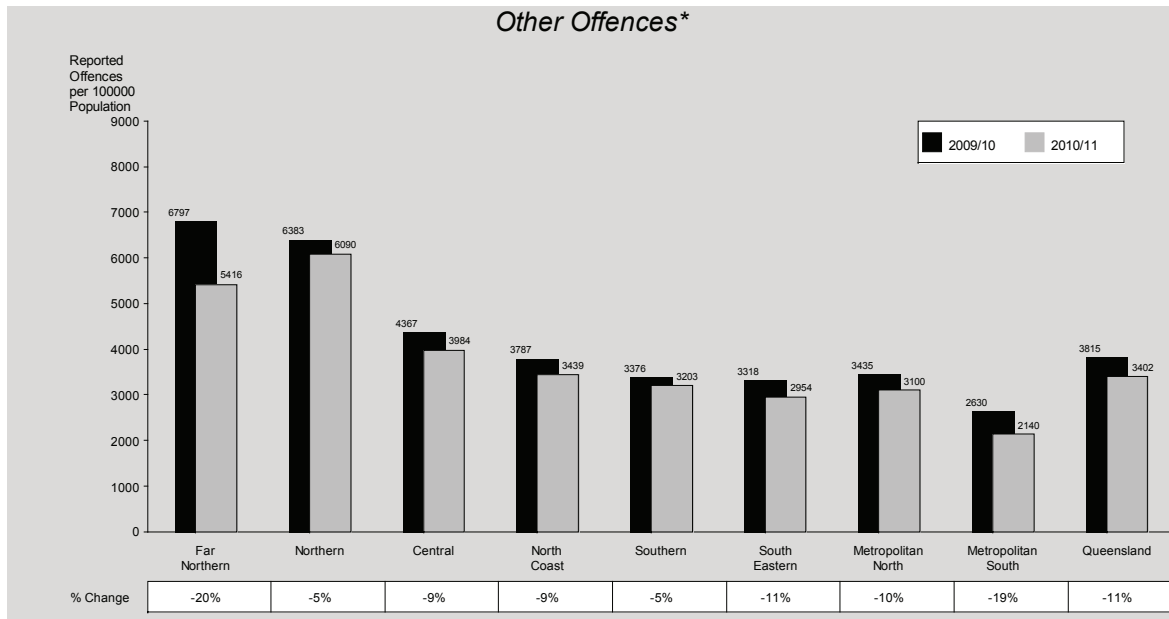

Four of the eight regions recorded decreases in handling stolen goods offences, which resulted in a 6% decrease for the State in the period under review. Far Northern Region recorded the highest rate in the State (132 offences per

100,000 persons) and Southern Region recorded the largest increase, however, also recorded the lowest rate. Metropolitan North Region recorded the greatest decrease of 23%.

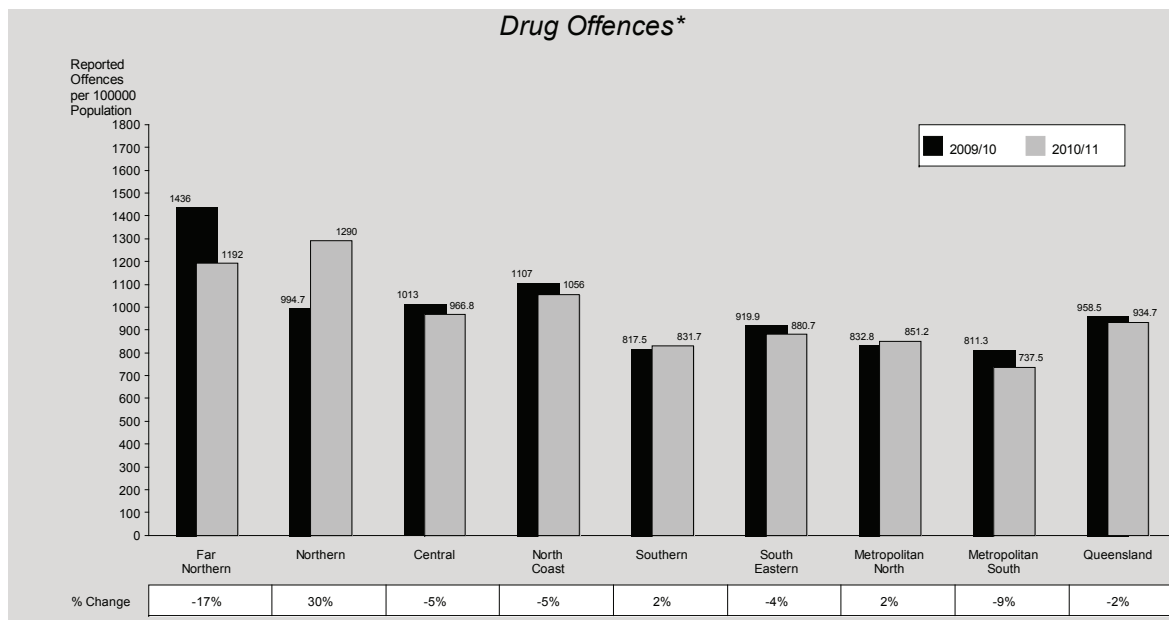

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Other offences are traditionally highest in the northern part of the State and 2010/11 was consistent with previous years with Northern Region recording the highest rate. All eight

Regions recorded decreases with Far Northern recording the highest decrease of 20%. Metropolitan South recorded the lowest rate for the thirteenth year running.

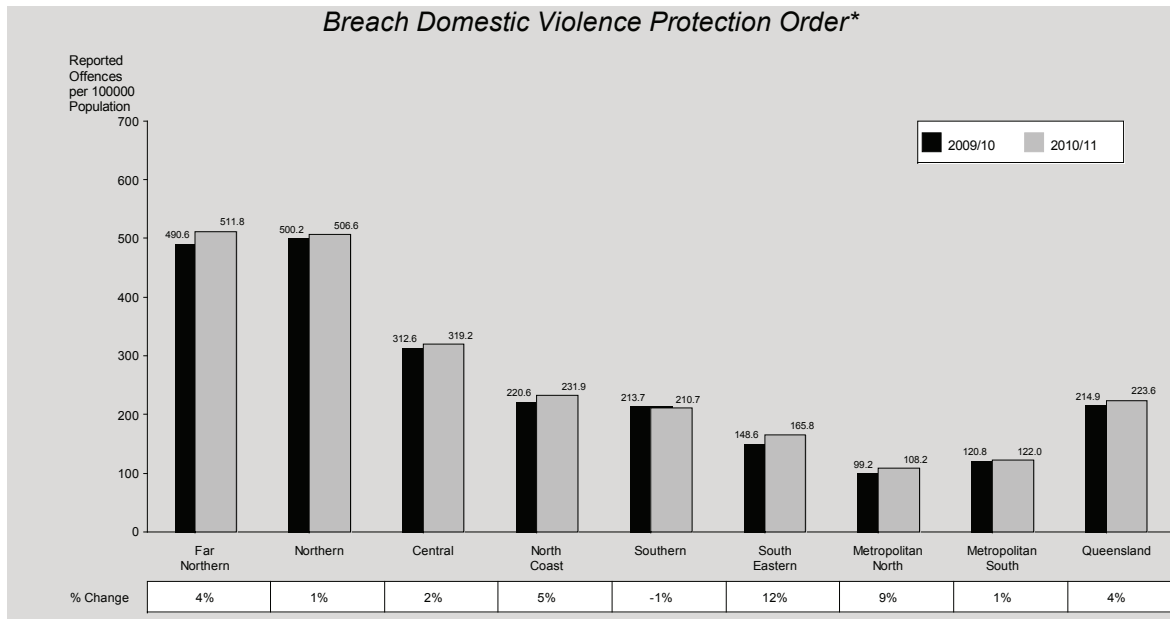

This year, the highest rate of drug offences was recorded by Northern Region while Metropolitan South Region recorded the lowest rate. Far

Northern Region recorded the largest decrease, while Northern Region recorded the highest increase

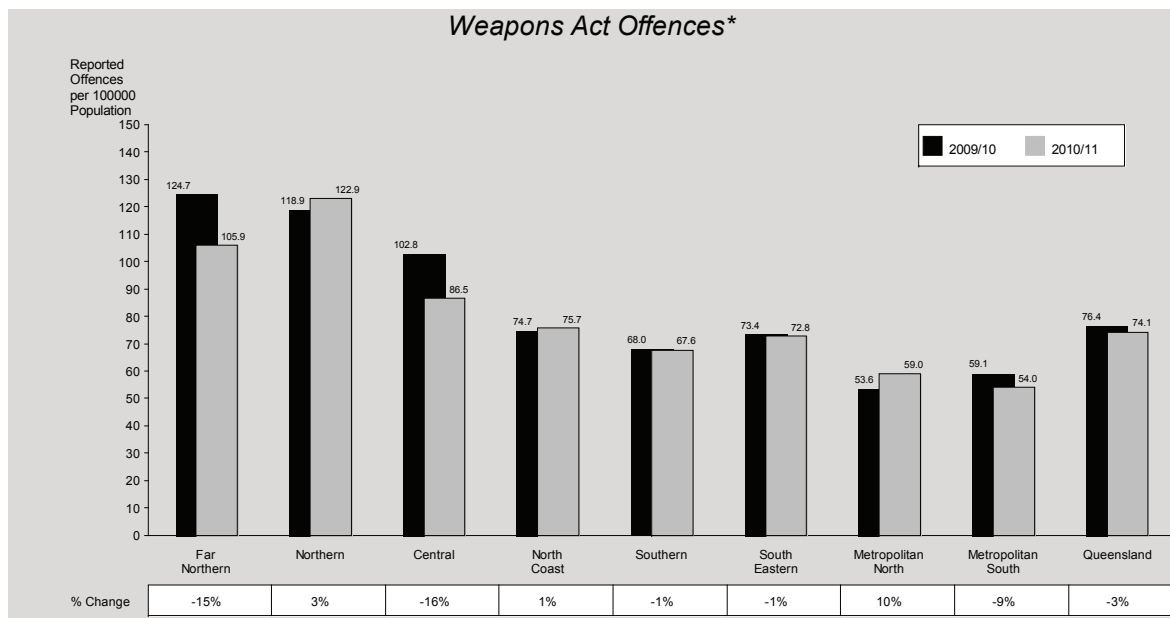

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

As in past years, the northern part of the State, recorded the highest rates of breach of domestic violence protection orders with Far Northern recording the highest rate. Also typically, the

south eastern regions recorded the lowest rates with Metropolitan North recording the lowest rate. Southern Region was the only region to record a decrease in this period.

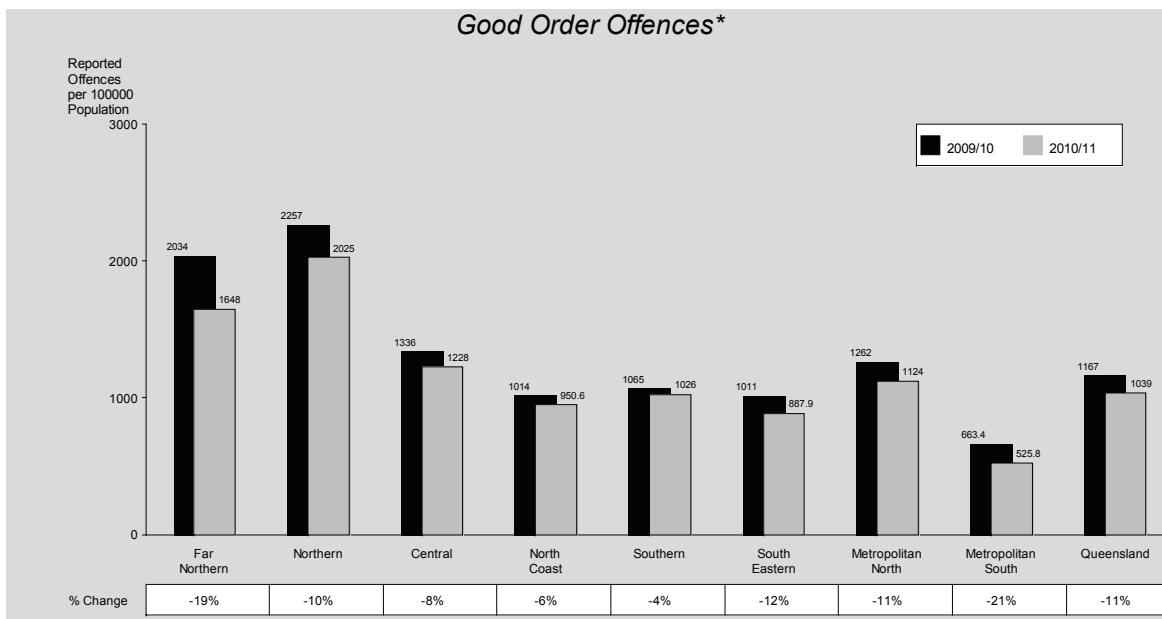

Northern Region recorded the highest rate in weapons act offences, whilst Central Region recorded the largest decrease of 16%. Metropolitan South Region recorded the lowest

rate (54 offences per 100,000 persons). Overall, the State recorded a 3% decrease as a result of decreases in five of the eight regions.

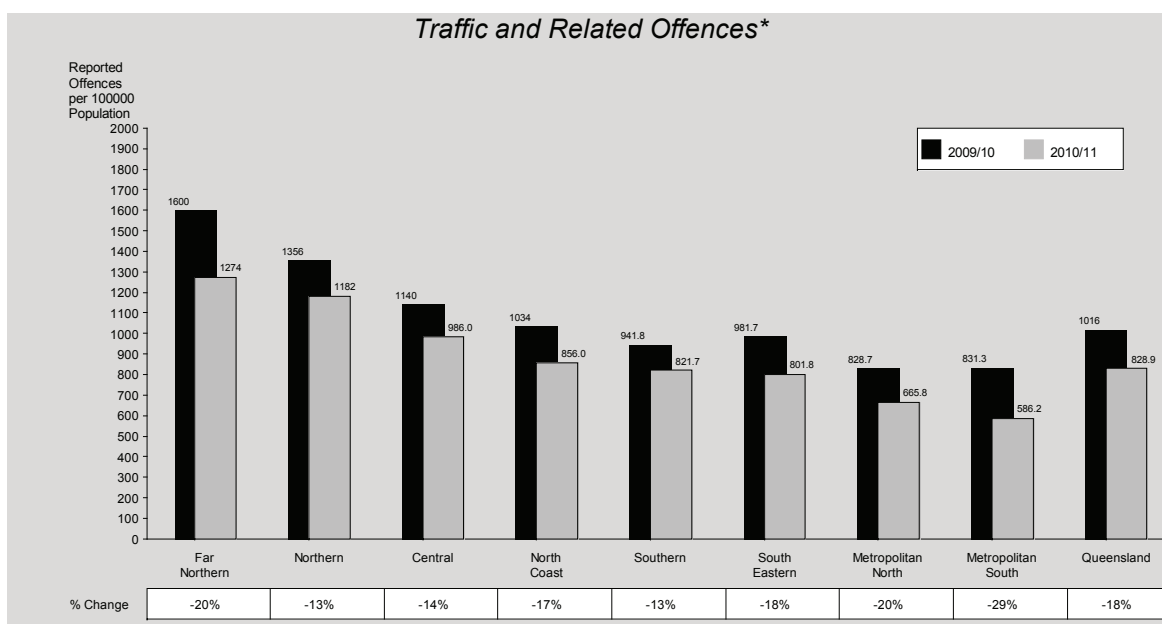

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

All eight regions recorded decreases in good order offences in the 2010/11 period. The highest rate was recorded by Northern Region and the largest

decrease of 21% was recorded by Metropolitan South Region. As in previous years, the lowest rate occurred in Metropolitan South Region.

Traffic and related offences, of which drink driving comprises the majority of offences, decreased in all regions. The northern regions again recorded the highest rates of traffic offences with Far

Northern Region recording 1274 offences per 100,000 persons. Metropolitan South Region recorded the largest decrease and the lowest rate.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

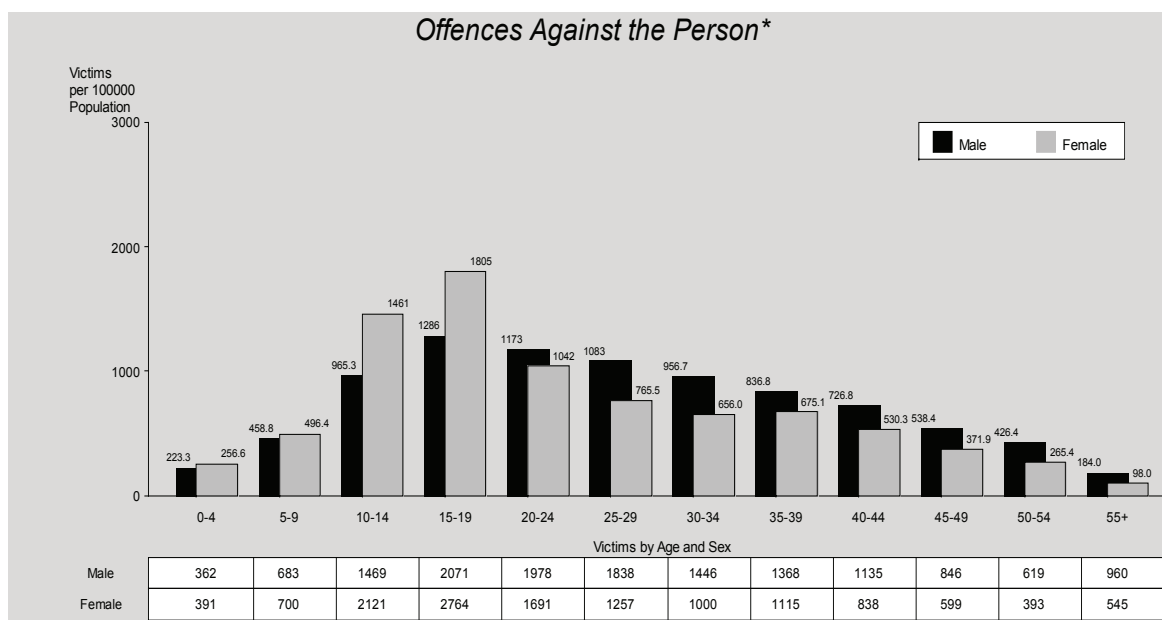

Victims of Crime

This section contains detailed information relating to victims of offences against the person. They do not provide a unique victim count as one person may be counted several times if they were the victim of more than one offence.

There are several cases where the victim of an offence against the person is not, according to the statistical definitions used, a person. For example, the victim of an armed robbery of a bank is the banking organisation, rather than the teller, while ‘armed so as to cause fear or alarm’ is commonly a “Regina” offence, where the Crown is deemed to be the victim. Organisations which were the victims of crime were not included in the following tables and graphs.

As the graph below illustrates, females aged fifteen to nineteen years are the most common victims of offences against the person on a per capita basis. Females aged fifty-five and over are the least victimised. During 2010/11, there were slightly more male than female victims. Fifty-three percent of victims were male, while forty-seven percent of victims were female.

The Australian Bureau of Statistics’ *Population by Age and Sex, Australian States and Territories, June 2010 (3201.0)* was used to calculate the number of victims per 100,000 persons. ‘Age’ refers to the victim’s age on the date the offence was reported to police, rather than their age on the date the offence occurred.

* Only those offences where the victim’s age and sex were identified are included.

Victims of Crime

by Age and Sex - 2010/11*

Offence	0-14		15		16		17		18		19

* Those victims whose sex was not stated have not been included.

Victims of Crime

Low rates of victimisation for homicide (murder) offences mean that rates fluctuate across age groups and from year to year. In 2010/11, females (aged thirty five to thirty nine years were most

likely to be victims of homicide (murder). Overall, 54% of victims were female. Fifty eight percent of all victims were aged thirty five years and older.

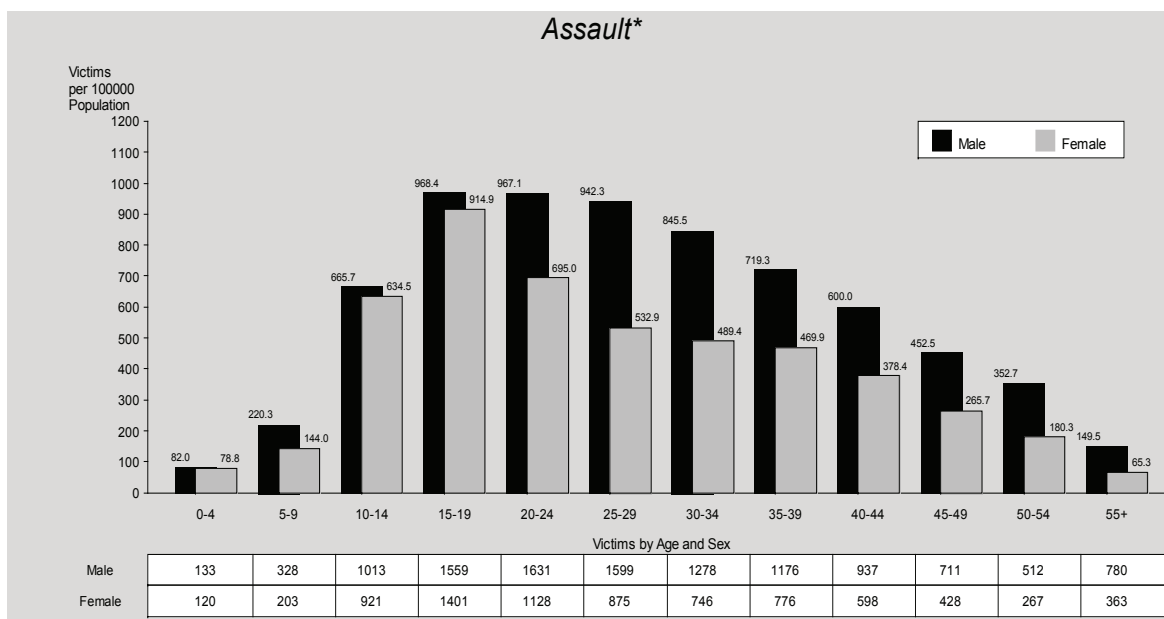

Other homicide offences are also subject to fluctuations across age groups and from year to year as a result of low rates of victimisation. Males aged twenty to twenty four were most likely to be

victims. Overall, 70% of victims were male. Of all female victims, those aged twenty five to twenty nine years were most likely to be victims of other homicide.

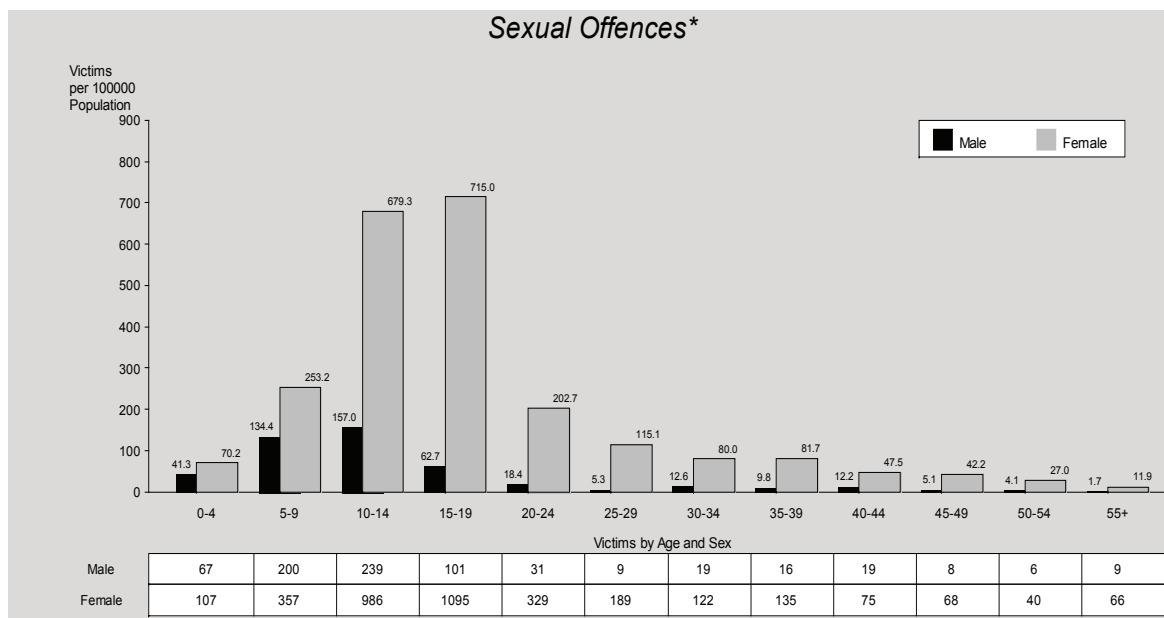

* Only those offences where the victim's age and sex were identified are included.

Victims of Crime

For every age cohort males were more likely to be victims of assault than females (59% of victims were male). Males aged fifteen to twenty nine years were most likely to be victims. More females

aged fifteen to nineteen years were victims compared with females in other age groups. The likelihood of being a victim of assault decreased with increasing age after nineteen years.

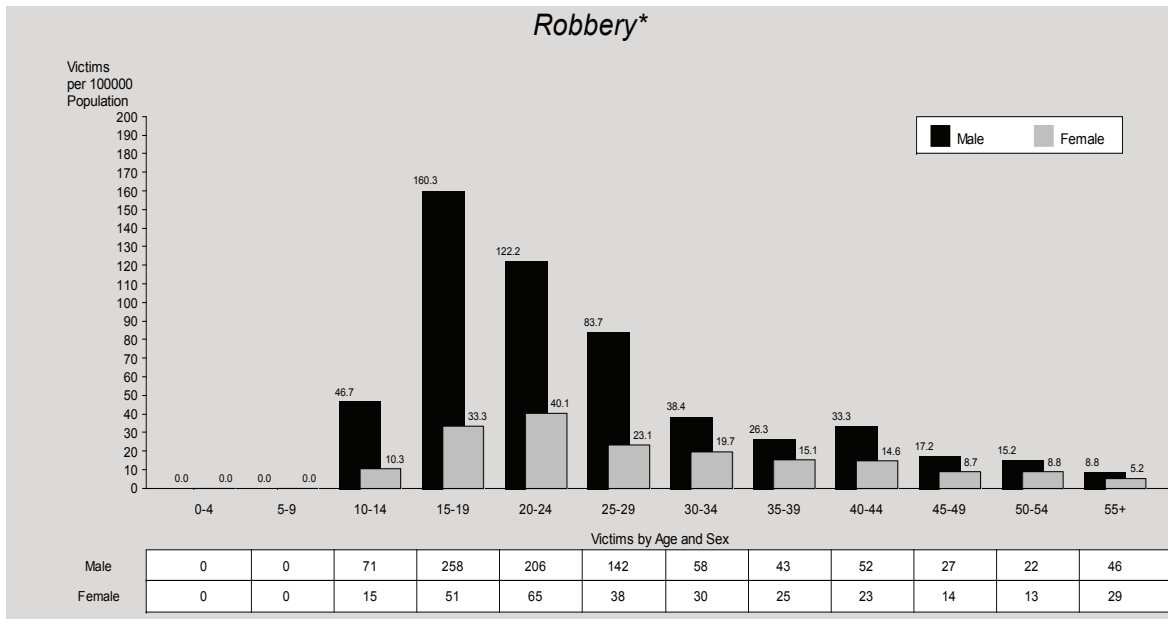

The offence category of sexual offences is unique in that the number of female victims far outweighs the number of male victims (83% of victims were female). At every age, females were significantly more likely to be victims than males with females

in the ten to nineteen years age range, the most likely. In fact, at this age females were almost six times more likely to be victims of sexual offences than males.

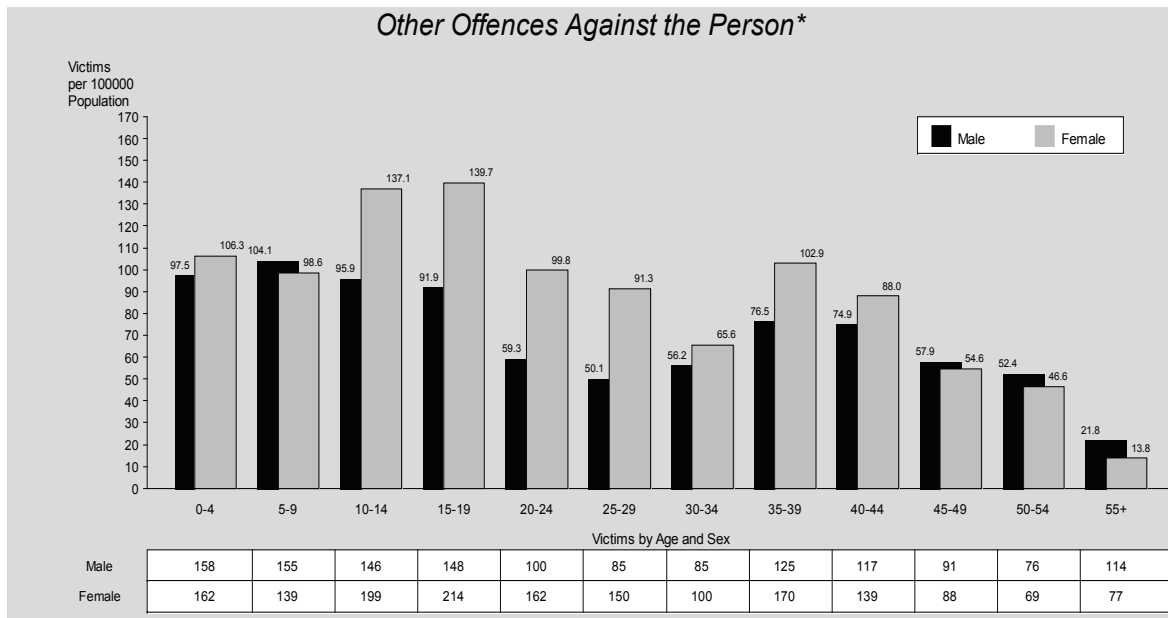

* Only those offences where the victim's age and sex were identified are included.

Victims of Crime

As with most other offences against the person, males were significantly more likely to be victims of robbery than females (75% of victims were male). Males aged fifteen to twenty four years were most likely to be victims. After the age of

twenty four years, the likelihood of being a victim decreased significantly with increasing age. Note that robbery is unique in that a large proportion of victims are companies not individuals.

Other offences against the person is an amalgam of a number of different offence types including ill treatment of children, stalking, armed to cause fear, etc. This offence category, like sexual

offences, is unique in that females are more likely to be victims than males. Females aged ten to nineteen years are the most likely victims of this offence type.

* Only those offences where the victim's age and sex were identified are included.

Offender/Victim Relationships

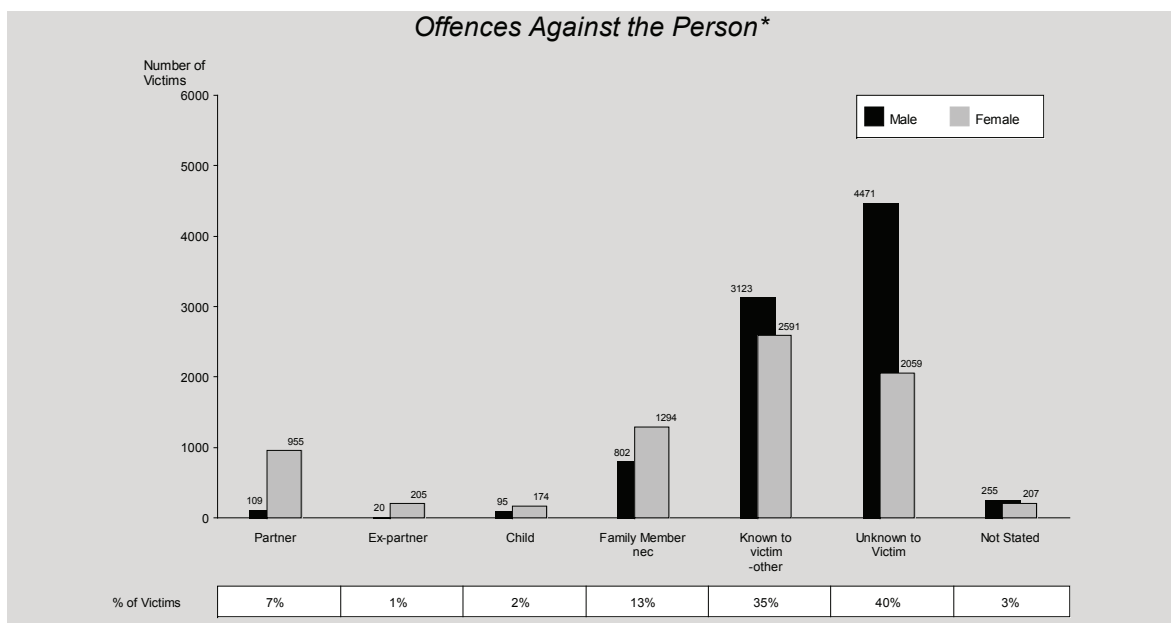

This section provides details of the types of relationships between offenders and victims for all offences against the person. Hence, only those offences that have been cleared are included in this section.

The statistics in this section are counts of victims, rather than offenders or relationships. They do not provide a unique victim count as one person may be counted several times if they were the victim of more than one offence.

The relationship classifications used are derived from those used by the Australian

Bureau of Statistics in *Recorded Crime – Victims, Australia (4510.0)*.

As recorded in the graph below, the offender was known to the victim in fifty-eight per cent of the cases where the relationship was identified, including twenty-three per cent where the offender and victim were related. The remaining ‘Known to Victim’ classification includes friends, colleagues, and both professional and other acquaintances.

* Only those offences where the victim’s age and sex were identified are included.

* Only those victims whose age and sex were identified are included.

Offender/Victim Relationships

For approximately 69% of homicide (murder) offences, the offender was known to the victim. Forty three per cent of victims were from the same

family as the offender, and this includes partners, spouses, children, siblings, grandparents, aunts, uncles and other familial relationships.

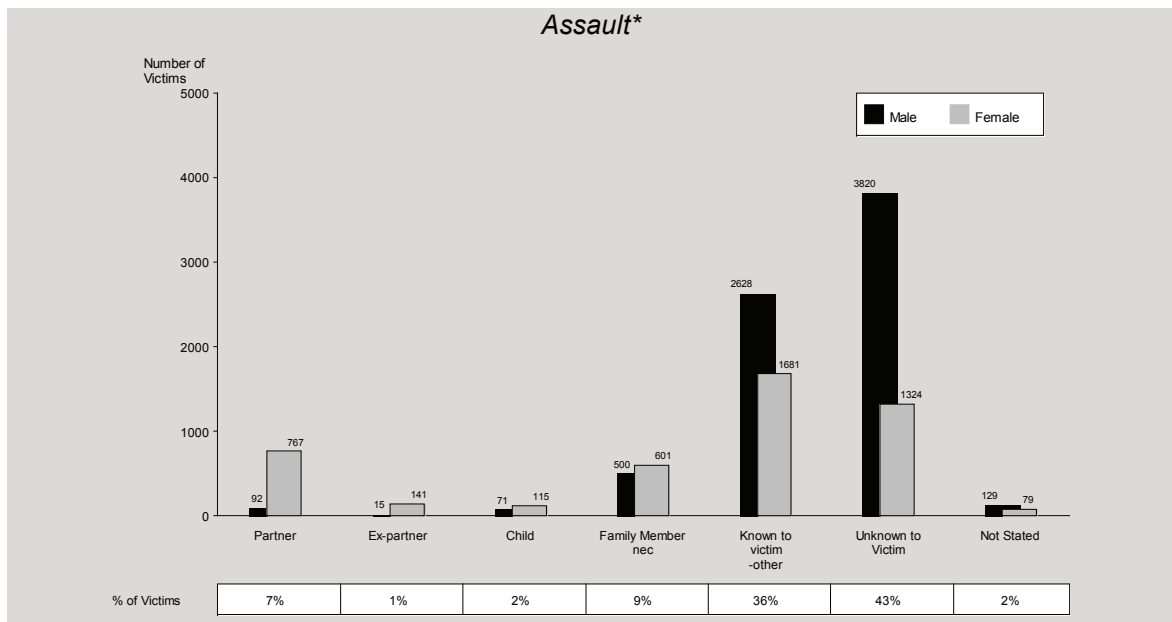

In 62% of other homicide cases, the offender was known to the victim. Of these cases, 24% were committed by a family member. A further 35% of

all victims were known to the offender either as friends, acquaintances, neighbours or colleagues.

* Only those offences where the victim's age and sex were identified are included.

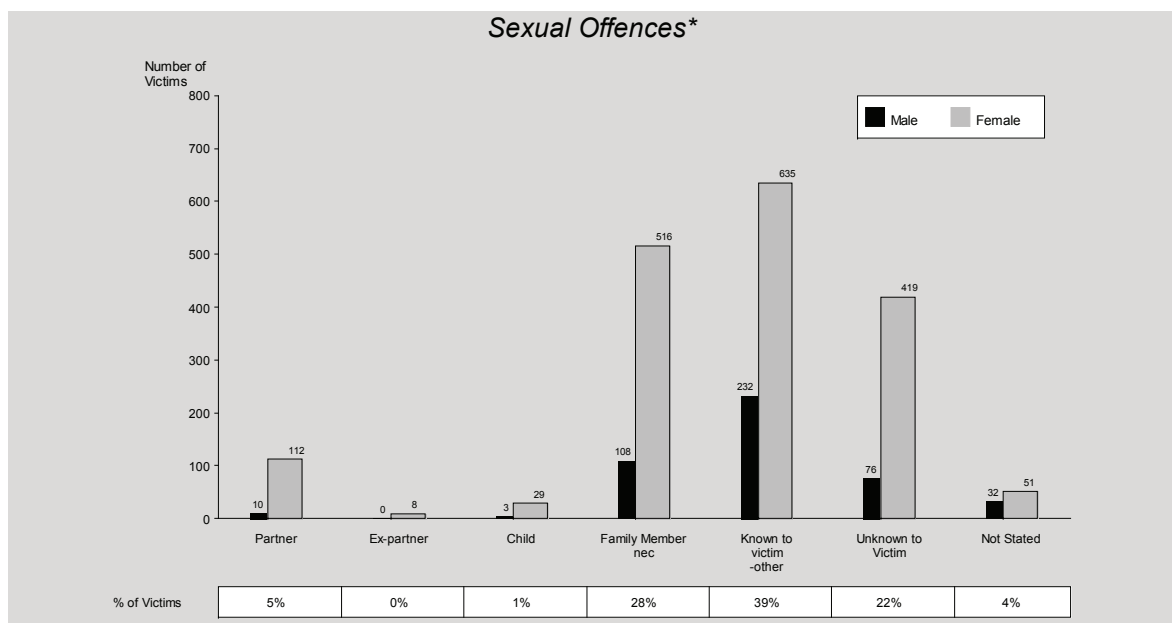

Note: Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%.

Offender/Victim Relationships

For all victims of assault, 43% were not known to the offender. In 18% of cases, the offender was a family member and a further 36% were known

to the offender either as friends, acquaintances, neighbours or colleagues.

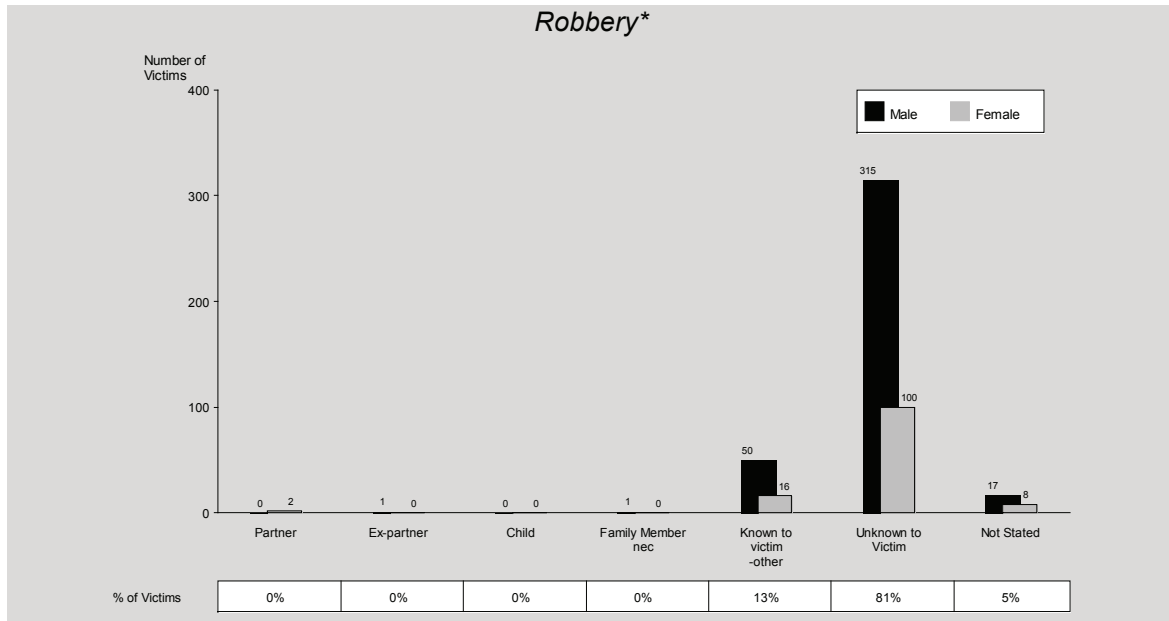

For a substantial proportion of victims of sexual offences (approx. 73%), the offender was known to the victim. A large proportion of victims (34%)

were of the same family as the offender while 39% were either acquaintances, friends, neighbours or colleagues.

* Only those offences where the victim's age and sex were identified are included.

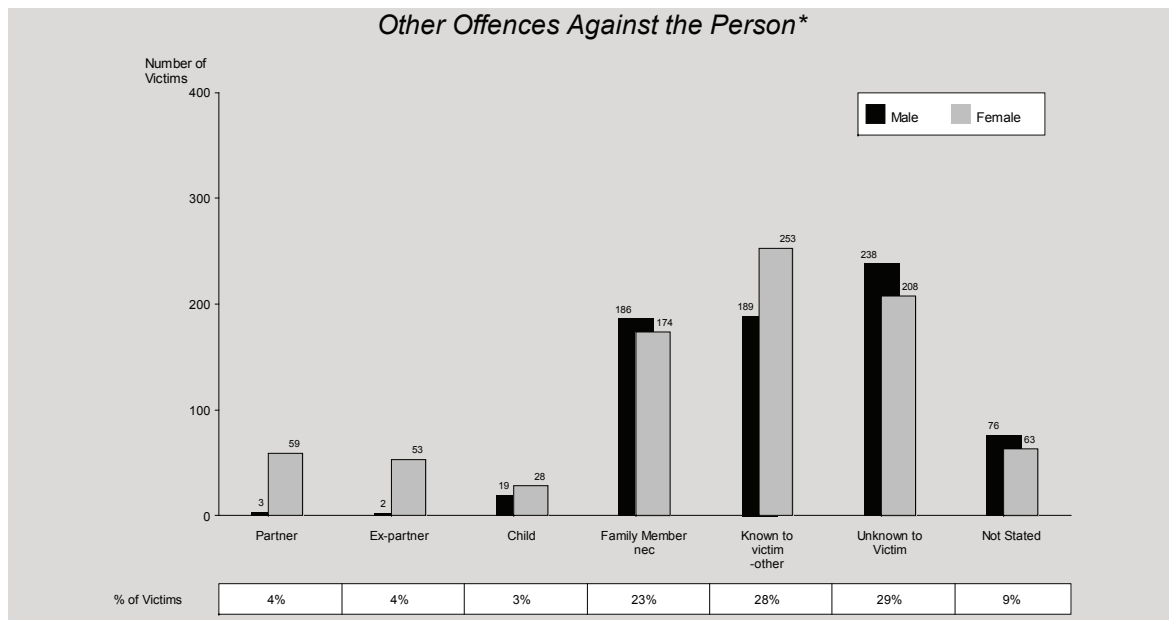

Note: Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%.

Offender/Victim Relationships

Approximately 5% of robbery offences, the offender/victim relationships were listed as 'Not Stated' due to the fact that the victim's relationship was not recorded on the

administrative system. In most cases (81%), the offender was not known to the victim. Robbery is unique in that very few offences are committed by family members.

Approximately 9% of other offences against the person offences, the offender/victim relationships were listed as 'Not Stated'. Of those relationships that were recorded, 29% involved situations

where the offender was not known to the victim. Approximately 30% involved offenders who were related to the victim and 28% who were known to the victim.

* Only those offences where the victim's age and sex were identified are included.

Note: Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%.

Offenders

The tables and graphs in this section provide information on persons responsible for offences. It is important to note that Queensland Police Service offender statistics are based on offence counts and do not and can not refer to individuals. Rather, offender data refers to the number of offences cleared or solved through an action against an offender. As such, offender data does not equate to a unique offender count nor does it equate to the number of offences cleared. For example, an offender charged with motor vehicle theft, unlawful entry, assault and other theft (excl. unlawful entry) would be included four times in any offender breakdown by age and sex.

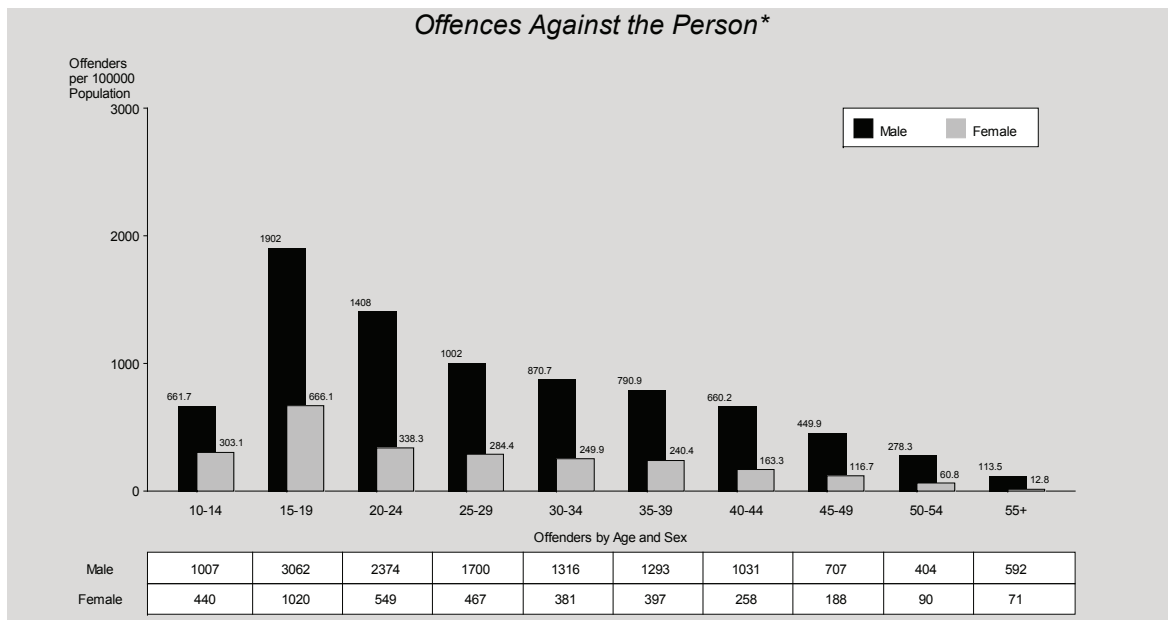

Only persons aged ten years and over are deemed to be offenders. Under Queensland law, children under ten are not held criminally responsible, although they

may be involved in the commission of an offence. Juvenile offenders are those aged between and including ten and sixteen years.

Offenders have not been included if their age or sex is not specified in Queensland Police Service records. Less than 1% of offenders have been excluded for this reason.

The Australian Bureau of Statistics' *Population by Age and Sex, Australian States and Territories, June 2010* (3201.0) was used to calculate the number of offenders per 100,000 persons.

The reference date used to generate offender statistics for the year under review is the date an action commenced. As such, offenders proceeded against for matters reported in previous periods will be included in the following tables and graphs.

* Only those offenders whose age and sex were identified are included.

This category includes attempted offences.

* Only those offenders whose age and sex were identified are included.

Offenders

For all age groups, males were more likely than females to commit homicide (murder) with males aged twenty five to thirty nine years representing 46% of all offenders. Of those proceeded against

for Homicide, 88% were male. Of the total 48 offenders responsible for homicide (murder) offences, only 6 were female.

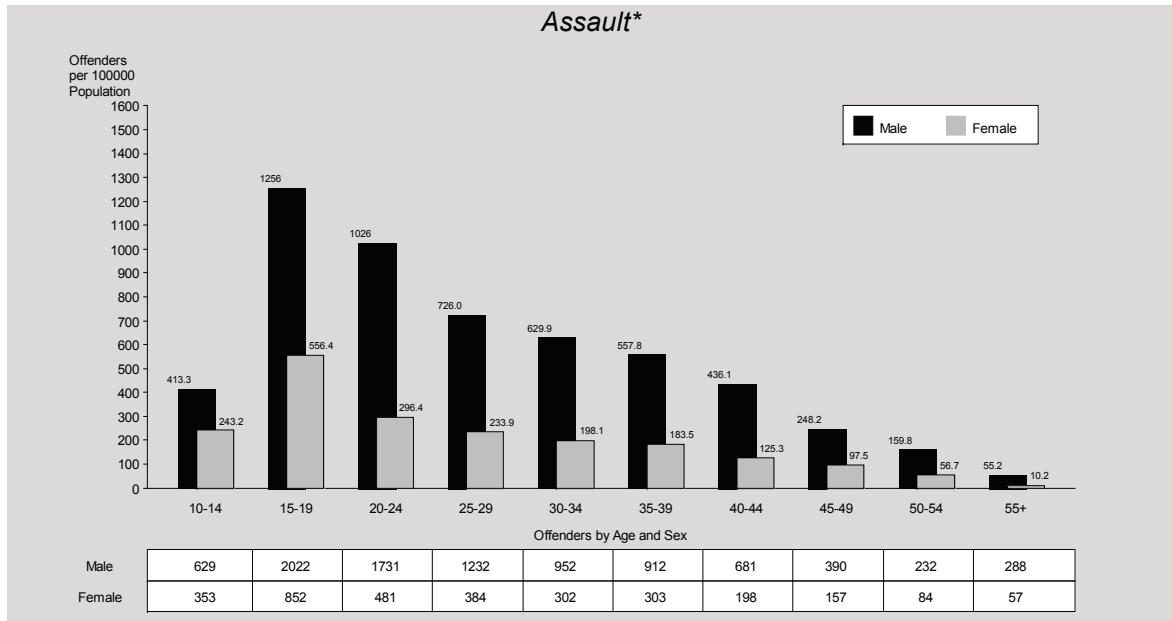

Males aged twenty to twenty four years were most likely to commit other homicide offences. At every age, males committed more offences than

females. In total, only 16% of those proceeded against for other homicide offences were female

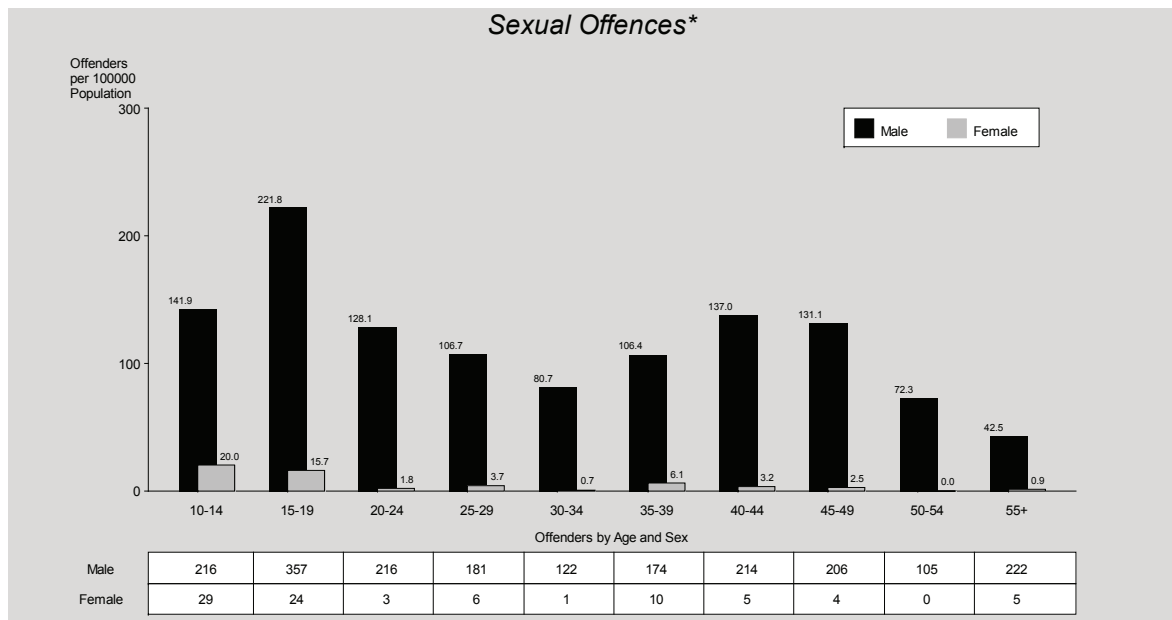

* Only those offenders whose age and sex were identified are included.

Offenders

As with most offence types after the age of nineteen years, the likelihood of committing assault offences, decreases with increasing age for both males and females. Approximately 74%

of offenders were male. In fact, 41% of offenders were male aged fifteen to twenty nine years. Both males and females in the fifteen to nineteen year age cohort were most likely to offend.

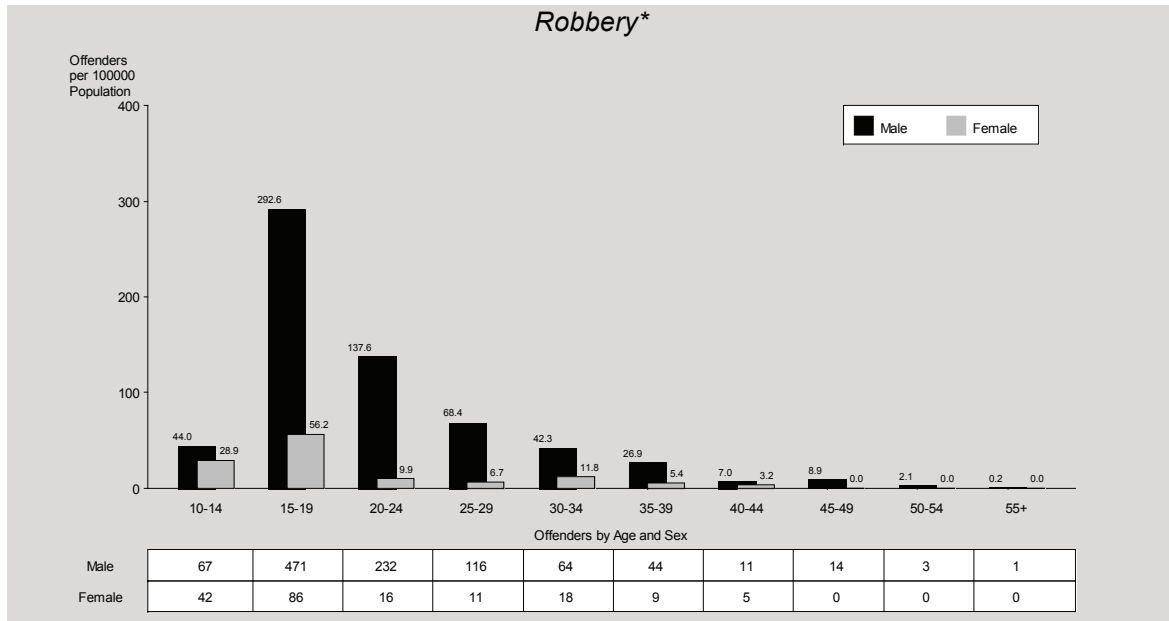

Sexual offences are unique in that the likelihood of offending does not decrease with increasing age to the same extent as other offences. In addition, most offenders were male (96%). During

the 2010/11 financial year, there were 87 female offenders for sexual offences across the State compared with 2,014 males.

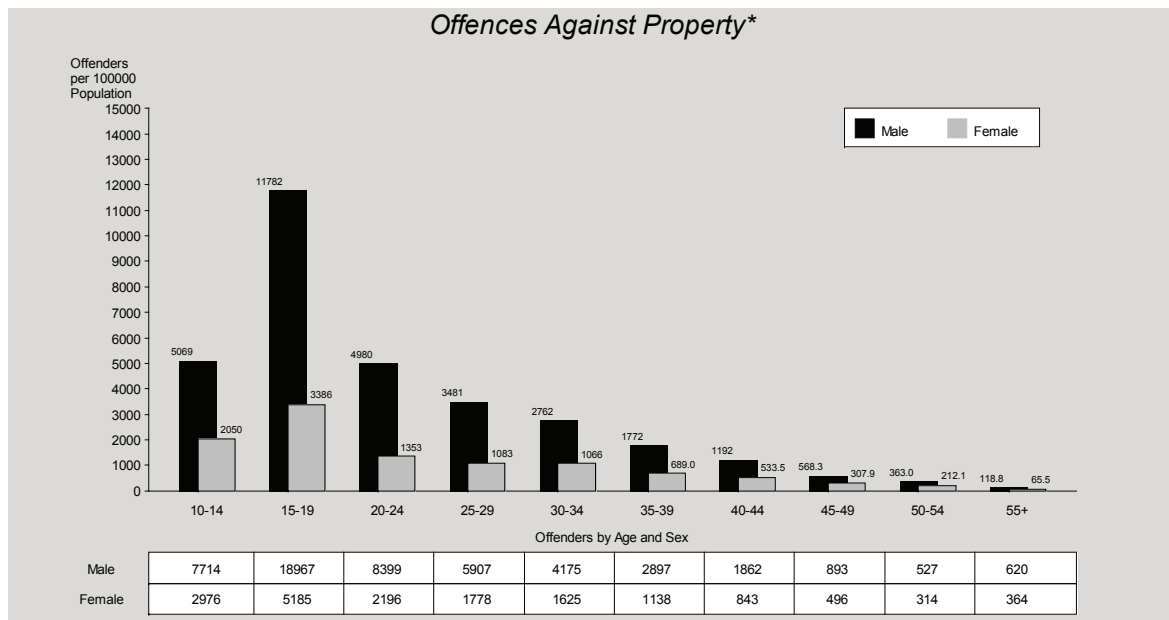

* Only those offenders whose age and sex were identified are included.

Offenders

Approximately 85% of offenders were male. Males and females in the fifteen to nineteen year age group were more likely to offend. In fact, males

aged fifteen to nineteen years comprised 39% of all offenders. Only five percent of offenders were female greater than twenty years.

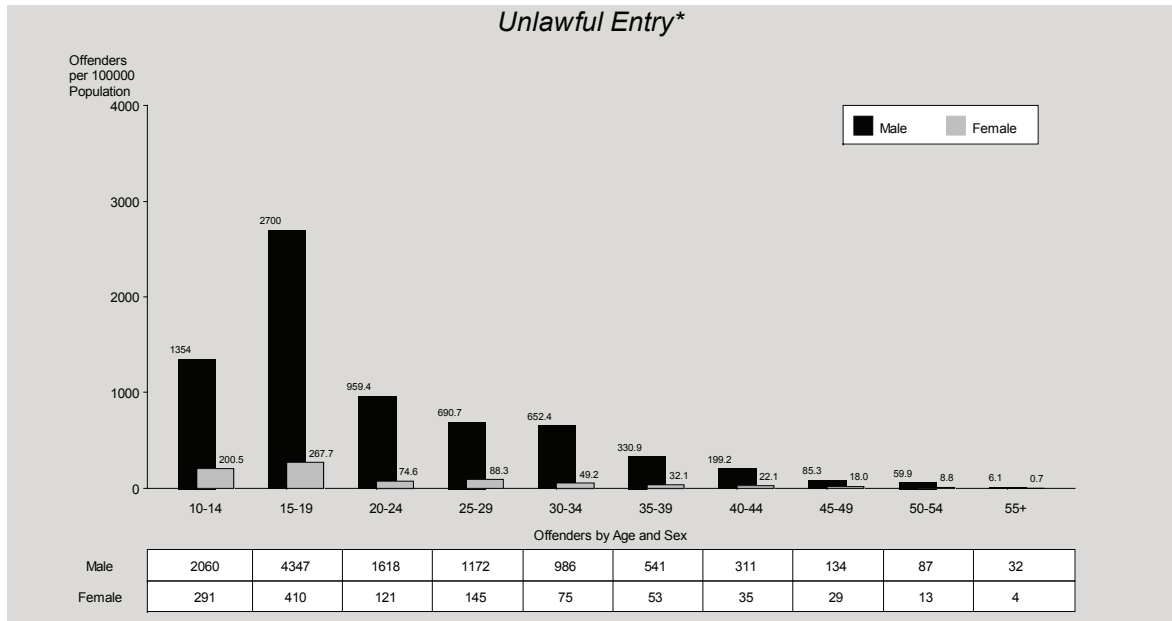

Males aged fifteen to nineteen years were over three times more likely to commit offences against property than females in the same age group. In total, only 25% of offenders were female. At

every age, males were more likely than females to offend for offences against property. The rate of offending after nineteen years of age, decreased with increasing age.

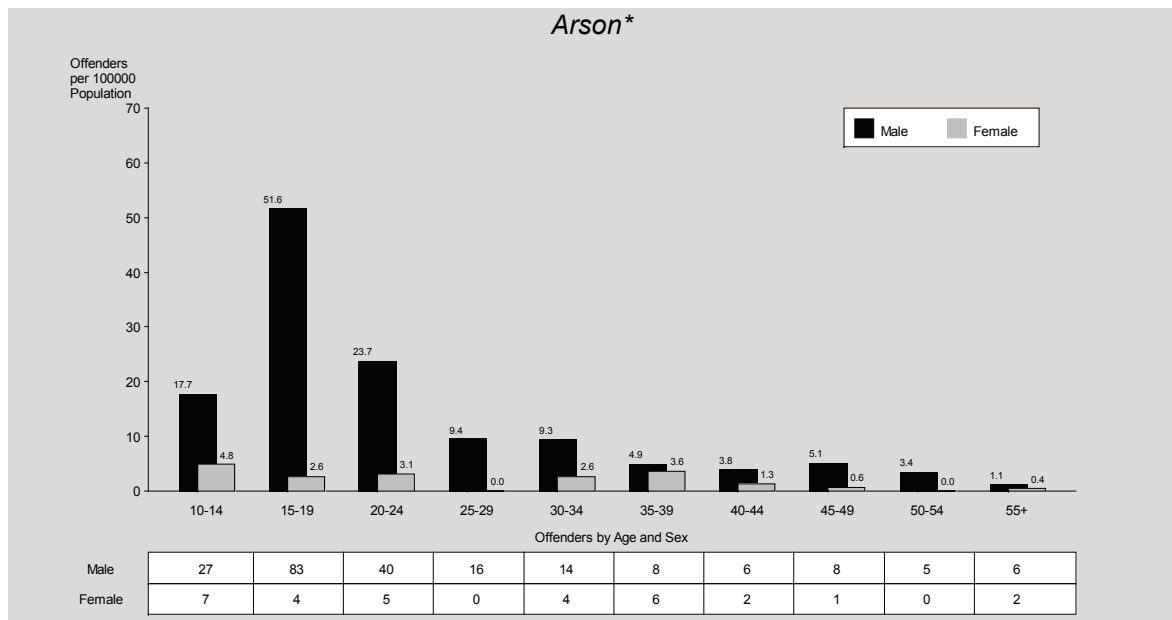

* Only those offenders whose age and sex were identified are included.

Offenders

As with most offence types, a large proportion of unlawful entry offenders were male aged fifteen to nineteen years (in fact, 91% of all offenders were male). Very few offences were committed

by persons in older age groups (over thirty-nine years). Approximately 51% of offenders were male aged between ten and nineteen years inclusive.

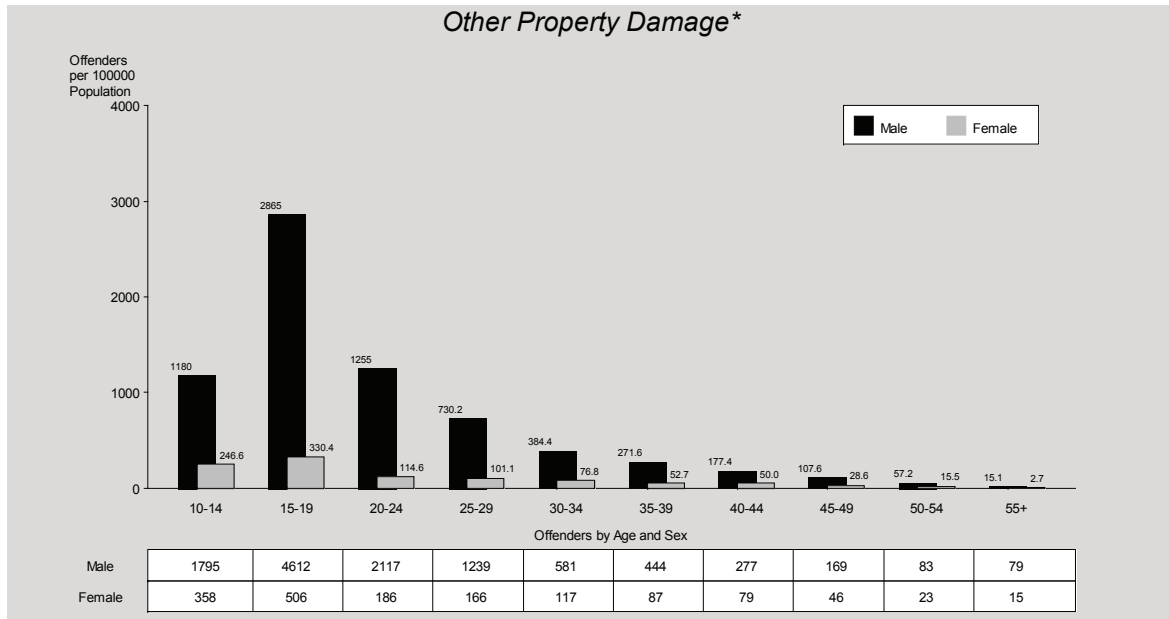

Approximately 87% of those proceeded against for arson offences were male, with 50% aged between fifteen and twenty four years. While only 13% of offenders were female, the largest

proportion were aged ten to fourteen years. As with most offences against property, very few offenders were recorded in older age groups (12% were forty years and over).

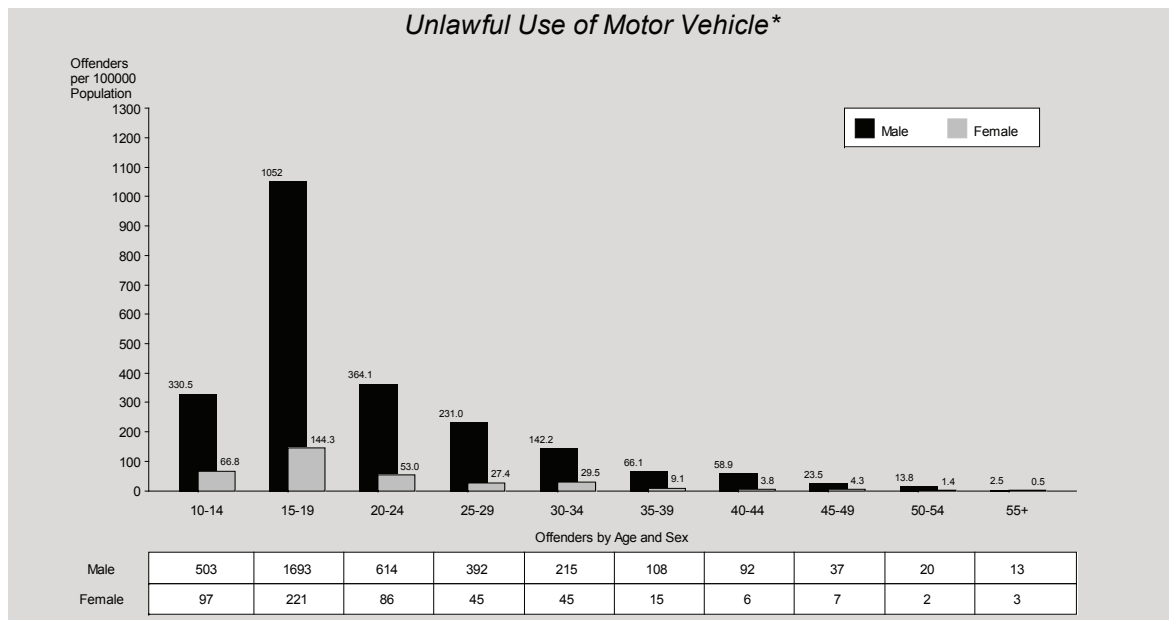

* Only those offenders whose age and sex were identified are included.

Offenders

As with most offences against property, the largest proportion (35%) of other property damage offenders were male aged between fifteen and nineteen years. At every age, males were more likely to offend than females (88% of offenders

were male). In addition, as with most offences against property, there were very few offenders in the older age groups with 6% of offenders aged forty and older.

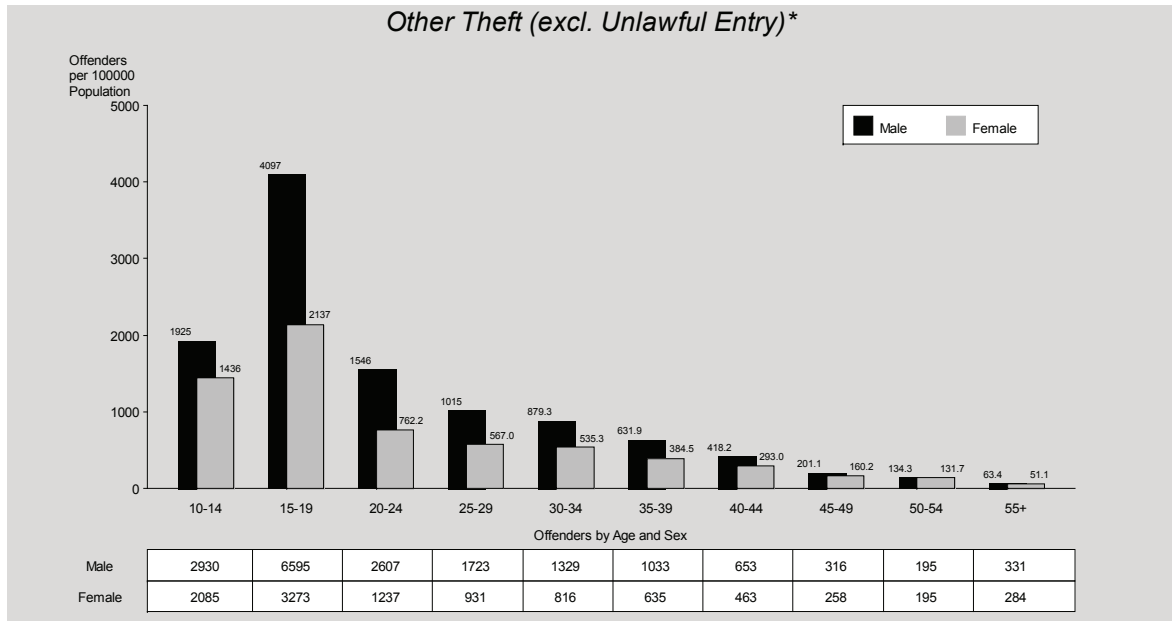

Approximately 87% of unlawful use of motor vehicle offenders were male, with 40% aged fifteen and nineteen years. While only 13% of offenders were female, 42% of female offenders

were aged fifteen to nineteen years. There were very few offenders (4%) in the older age groups (forty years and over). Please note that attempted offences are included in this category.

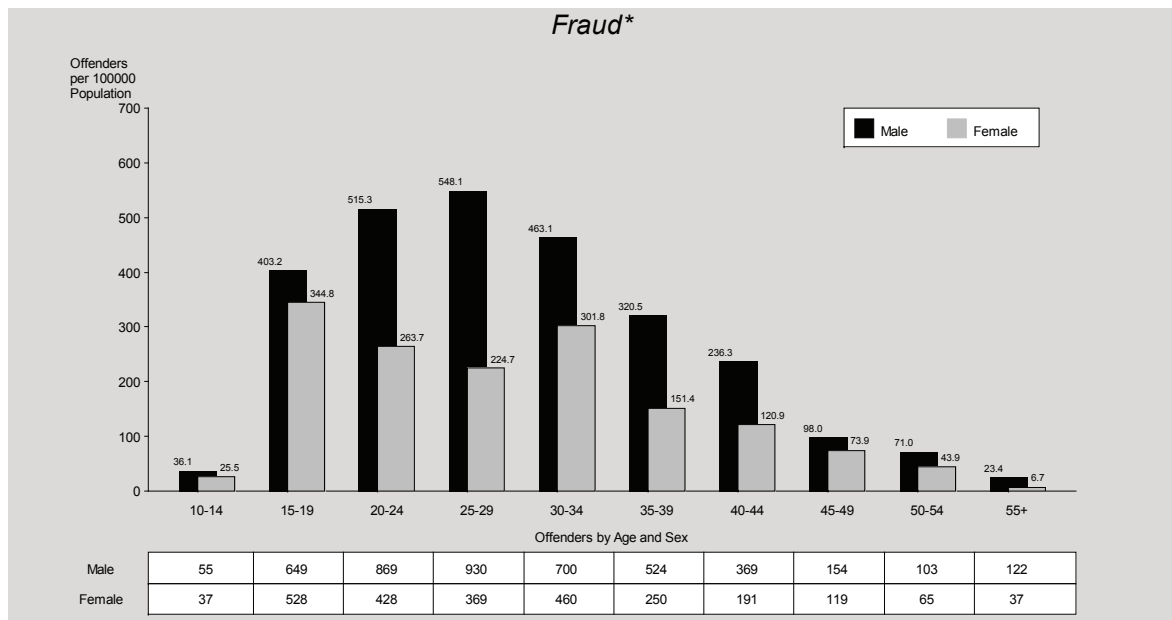

* Only those offenders whose age and sex were identified are included.

Offenders

The other theft (excluding unlawful entry) offence category is one of a small number of offences against property committed by a substantial proportion of females. In 2010/11, 36% of

offenders proceeded against for other theft (excluding unlawful entry) offences were female. Approximately 33% of the total offenders were male in the fifteen to twenty-four year age cohort.

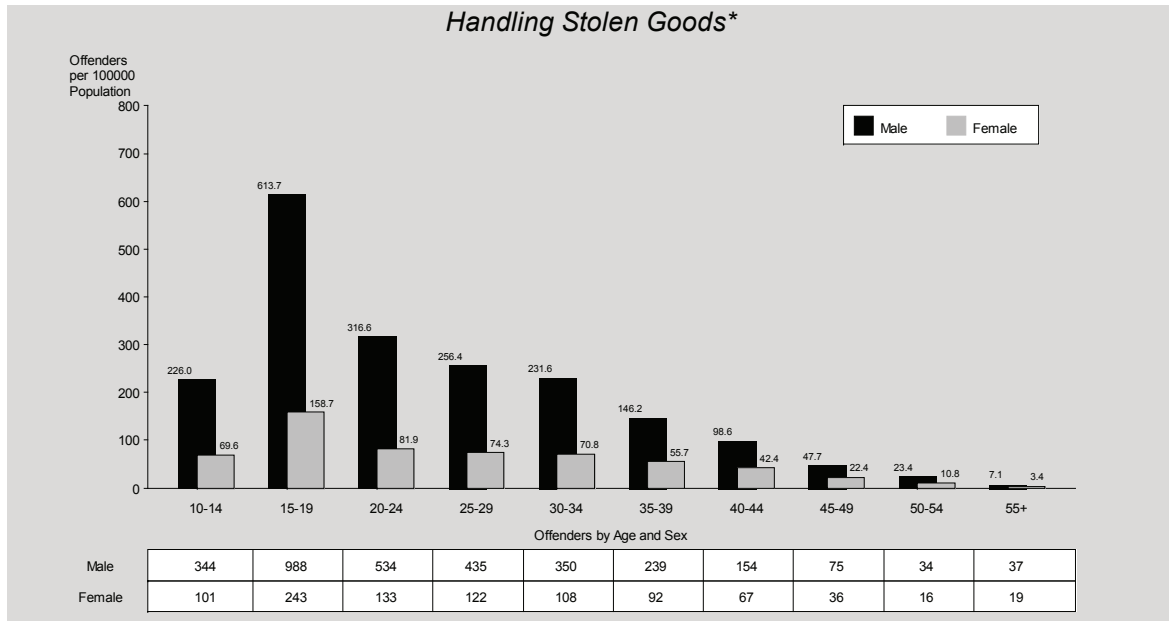

Fraud is another of the offences against property for which a relatively high proportion of offenders are female. In 2010/11, 36% of those proceeded against for fraud were female. Males aged twenty

to thirty-four years were most likely to offend, in fact, 56% of all male offenders were in this demographic.

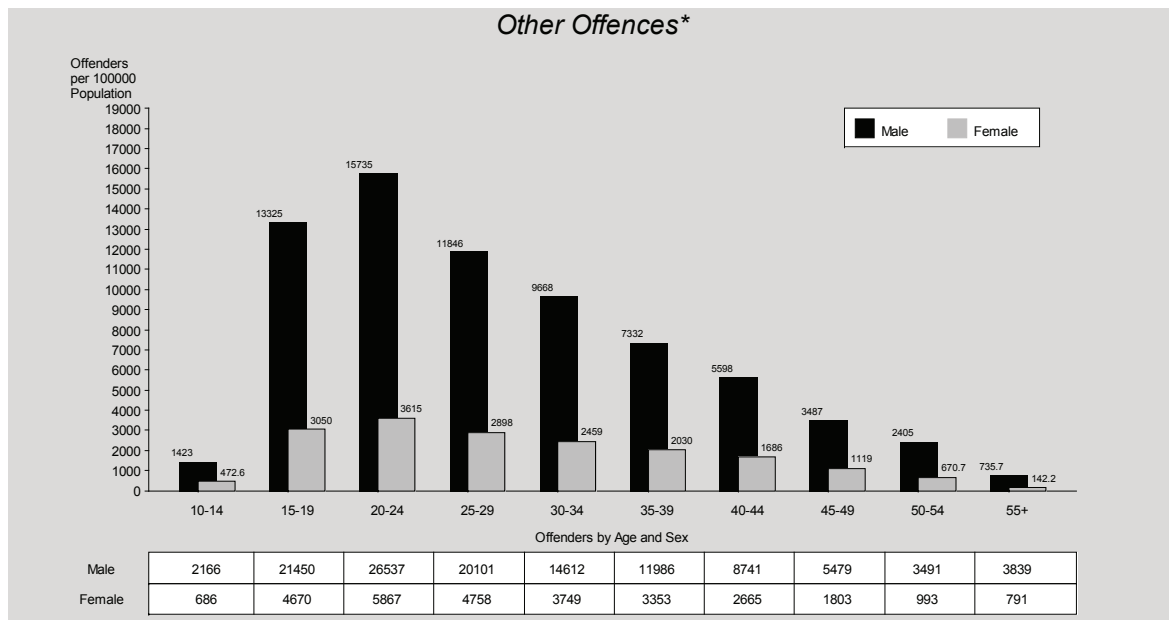

* Only those offenders whose age and sex were identified are included.

Offenders

In all age groups, males were more likely than females to offend for handling stolen goods offences (77% were male). For both males and females, those in the fifteen to nineteen year age

group were most likely to offend. As with most offence types the rate of offending, after the age of nineteen, decreased significantly with increasing age.

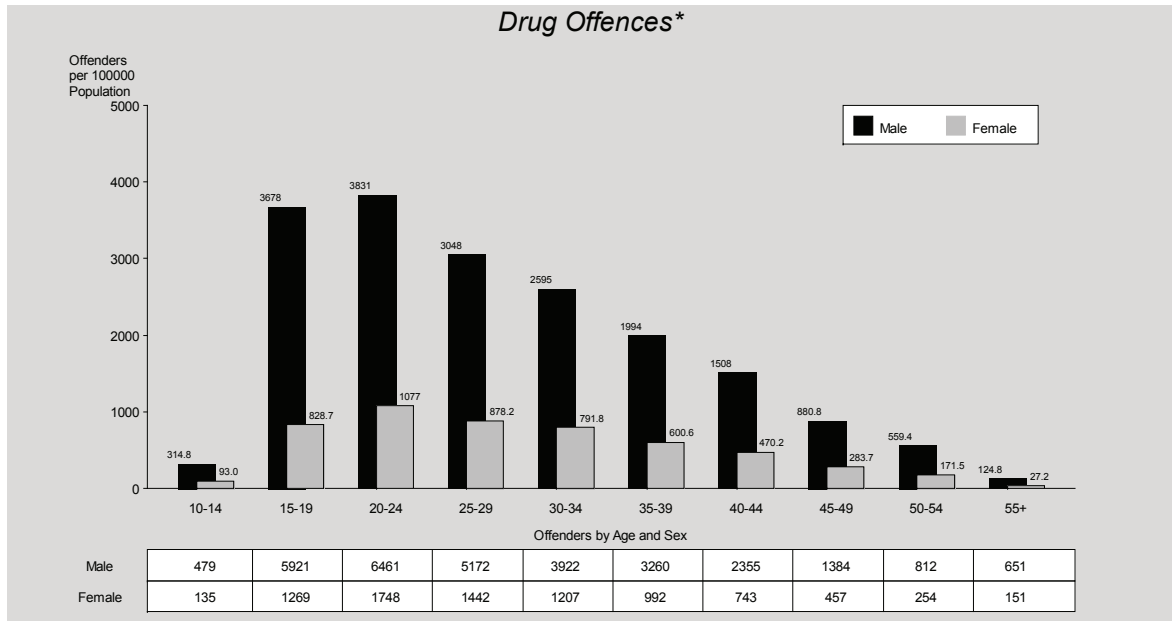

The majority (80%) of offenders for other offences were male, with males aged fifteen to twenty-nine years comprising 46% of offenders in 2010/11. Approximately 58% of offenders were aged under

thirty years. Of all female offenders, those aged twenty to twenty-four years were most likely to offend.

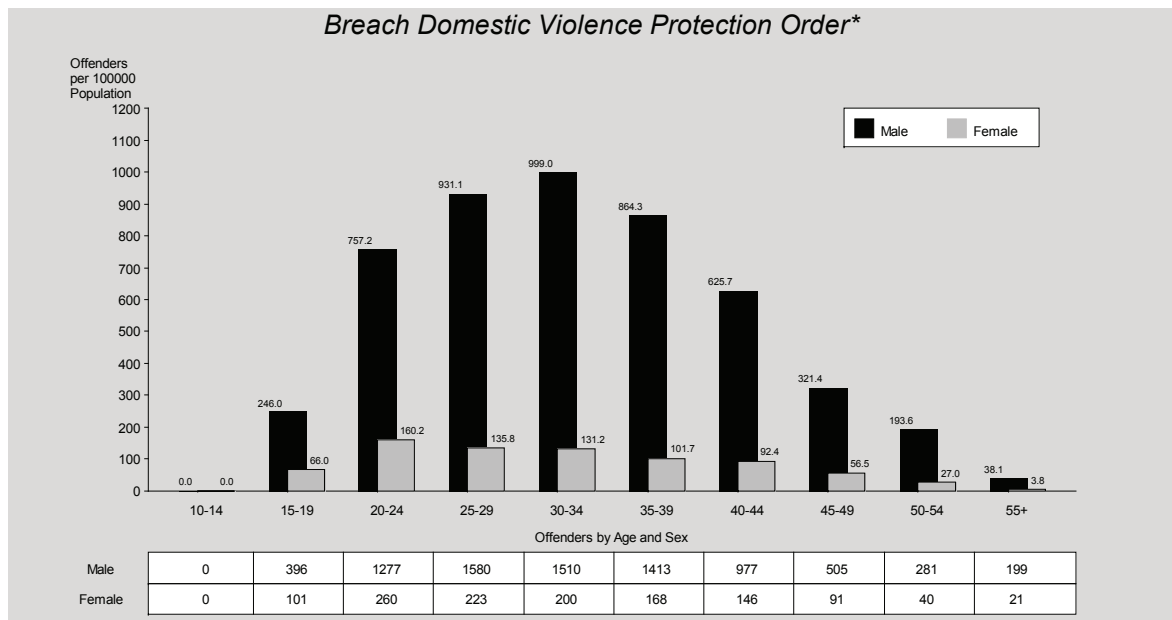

* Only those offenders whose age and sex were identified are included.

Offenders

Approximately 78% of offenders for drug offences were male, with the majority aged between fifteen and twenty nine years inclusive. Females in the fifteen to twenty-nine year age bracket were also

more likely to offend compared with those in other age groups. Unlike other offence categories, a sizeable proportion (17%) of offenders were aged over thirty-nine years

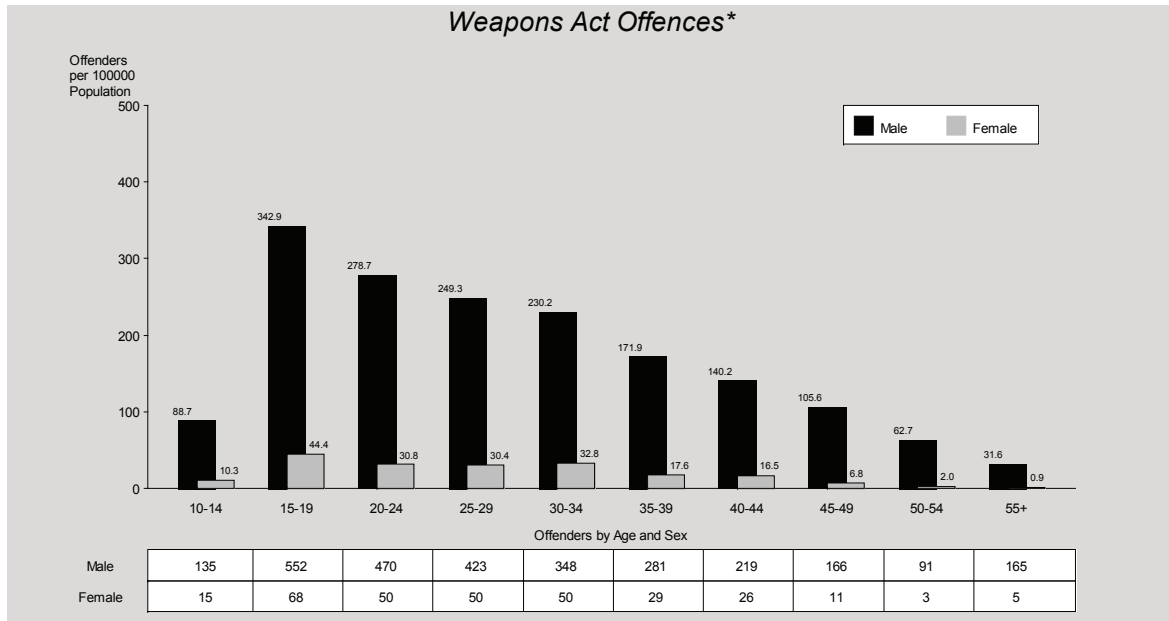

Approximately 87% of offenders for breach of domestic violence protection orders were male and most were aged between twenty five and thirty-nine years (48%). Unlike other offence

categories, a significant proportion of all offenders (24%) were in the older age groups (forty years and over).

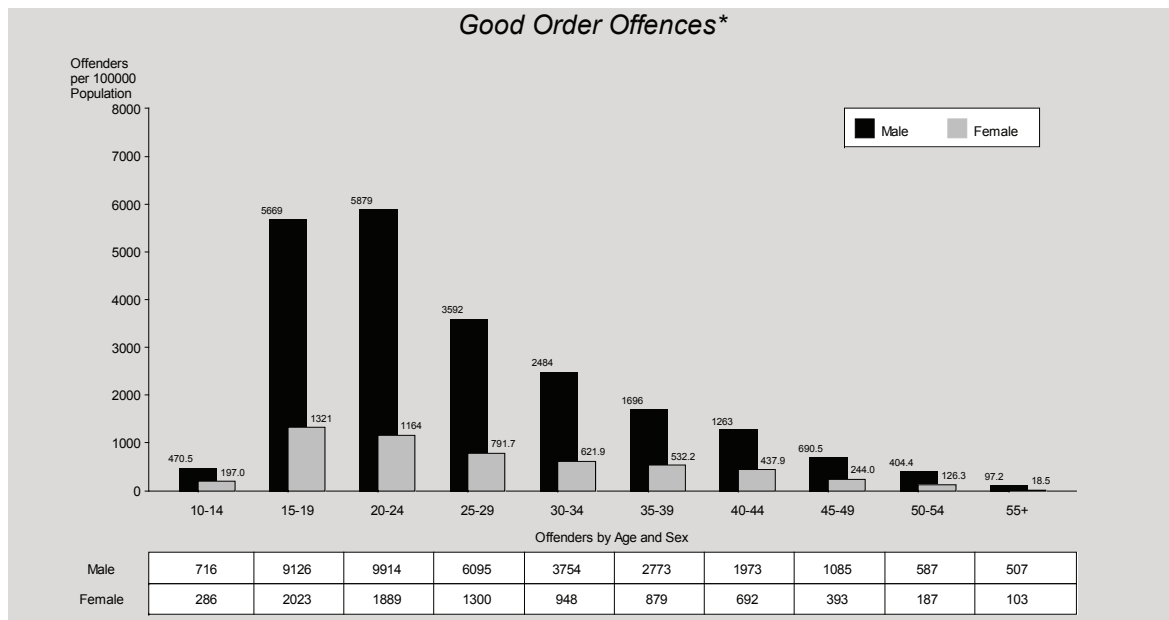

* Only those offenders whose age and sex were identified are included.

Offenders

Approximately 90% of those actioned against for weapons act offences were male and most were aged fifteen to nineteen years. For females, those

aged fifteen to thirty four years were most likely to offend. The rate of offending after the age of nineteen decreased as age increased.

Patterns of offending for good order offences are typical of those displayed in most offence categories. The majority of offenders were male (81%) with males in the fifteen to twenty-four age

group most likely to offend (42% were in this demographic). After the age of twenty-four years, the rate of offending decreased with increasing age.

* Only those offenders whose age and sex were identified are included.

Crime Locations

This section provides a breakdown of crime by the type of location in which the offence occurred. The location classifications are based on those used by the Australian Bureau of Statistics in compiling the Recorded Crime - Victims, Australia 2010 (4510.0). A crime location is defined as

the initial site where a criminal incident occurred, classified by the primary function of that site where the site has more than one function. This definition may encompass any surrounding land, yard, car parking area, together with any other structures existing at the location.

* Only those offenders whose age and sex were identified are included.

** Community By-Law offences cannot be separated into offences with and without violence. As such, sub-categories may not add to the total.

This category includes attempted offences.

District Crime

In this section, a detailed examination of reported and cleared crime is provided for the Queensland Police Service's statistical regions and districts during the 2010/11 financial year.

The tables include some offences where the Police District in which the offence occurred cannot be identified according to current police boundaries. There are two instances where this may occur:

- The offence was detected as part of a covert operation, and the location of the

offence has not currently been recorded to maintain security; and

- The accuracy of the address has not been determined at the time that the data was extracted for inclusion in this publication. That is, the address was not verified.

In these cases, the offences have been included in the highest hierarchical geographical level available. Therefore, police district statistics may not always sum to regional totals, or regional statistics to Queensland totals.

Missing Persons

This chapter has been introduced to provide information relating to the number of missing persons reported and located in Queensland.

The tables offer information on the number of missing persons reported and located by age and gender.

Missing Persons

Number of Reported Missing Persons* by Age & Sex – 2010/11

* Only those persons whose age and sex were identified are included.

The accuracy of the address has not been determined at the time that the data was extracted for inclusion in this publication. Therefore, police district statistics may not always sum to regional totals, or regional statistics to Queensland totals.

Traffic

This section contains information relating to the number of road fatalities, drink driving offences, speed and red light camera offences, vehicle impoundments, and random breath and roadside drug tests conducted within Queensland.

All data included in this section were provided by the State Traffic Support Branch, Queensland Police Service and are current as at 30 June 2011.

* Although offences per 100,000 persons have been rounded to the nearest whole number, the actual rate was used to calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in smaller volume offence categories.

** Casualty data obtained from WebCrash 2.3 database. Population data by Region and District sourced from Statistical Services and extrapolated to December 2009 and 2010 for calculating fatality rates. December 2010 population figure for Queensland total fatality rate was sourced from ABS Catalog 3101.0 (December 2010 issue).

Note: The aggregate of district totals may not equal regional totals [see detailed explanation on page 105].

Queensland	56629	47540	-16	146	91	-38

* Although offences per 100,000 persons have been rounded to the nearest whole number, the actual rate was used to calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in smaller volume offence categories.

** Data is extracted from the Traffic Scheduling & Reporting System and Integrated Traffic Camera System. These systems are live databases which means that figures reported are subject to change based on the date and time data is extracted from the Systems. All offences detected by fixed speed and/or red light cameras do not necessarily result in the issuing of an infringement notice. Images of an offence detected by a camera go through an adjudication process by accredited Traffic Camera Office staff to assess whether there is sufficient evidence to meet legal requirements to issue an infringement notice. Should the legal requirements be met then an infringement notice will be issued. Differences observed between offences detected and notices will be the result of this adjudication process.

*** Not all regions are represented in this dataset as Fixed Speed Cameras are located in four of the eight police regions.

* Data current as at 23/09/2011

Traffic

Queensland's road fatality rate for the 2010/11 financial year was 5.52 fatalities per 100,000 persons. Queensland recorded 8% decrease in the rate per 100,000 persons when compared

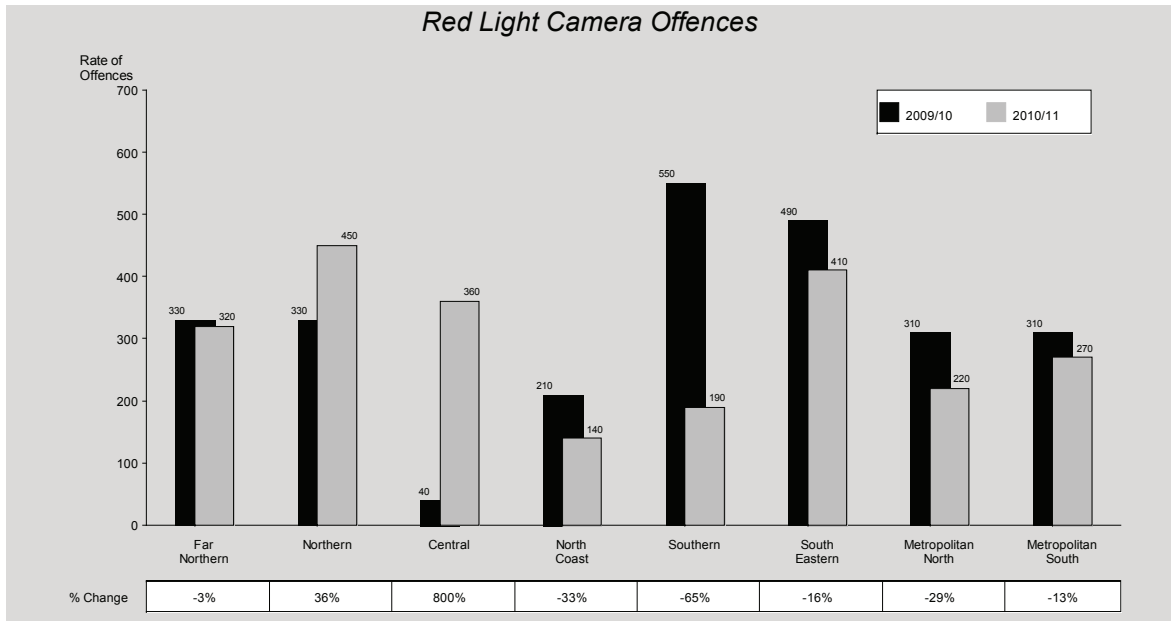

with the previous year. The rate of 5.52 fatalities per 100,000 persons in 2010/11 was the lowest road fatality rate recorded for the State during a financial year since records began in 1952.

[^] The aggregate of region totals do not equate to the number of tests conducted statewide.

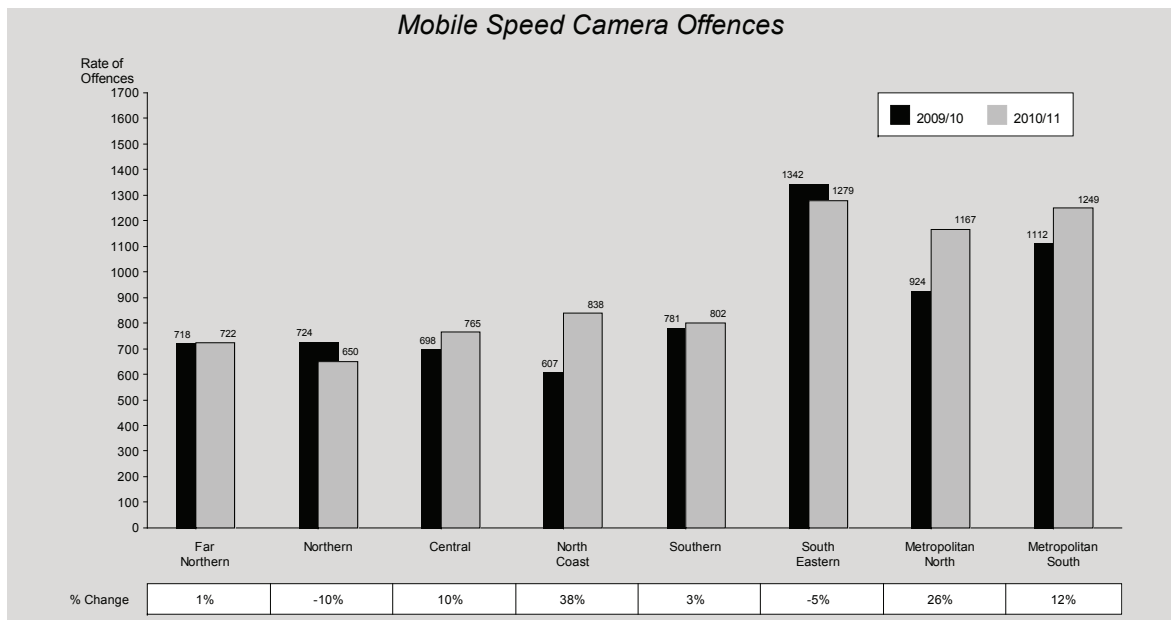

^{*} The total is not inclusive of State traffic Task Force figures.

Traffic

Northern Region recorded the highest rate of red light camera offences in the State and North Coast Region recorded the lowest. The largest increase

was recorded by Central Region and the greatest decrease was recorded by Southern Region during the period under review.

South Eastern Region recorded the highest rate of mobile speed camera offences while Northern Region recorded the lowest rate as well as the

greatest decrease. Metropolitan North recorded the greatest increase in the State.

Crime Statistics in Focus

This chapter provides a detailed examination for selected topics of public interest.

The tables offer information on the reported number and rate per 100,000 persons for public nuisance offences, Move-on

Directions and assaults on Police. These statistics have been provided for the Queensland Police Service's statistical regions and districts.

1 The region total for Actual Strength includes employees for Regional Functions and the Brisbane Watchhouse.

2 Due to the rounding, the aggregate of region totals do not equate to the Queensland total.

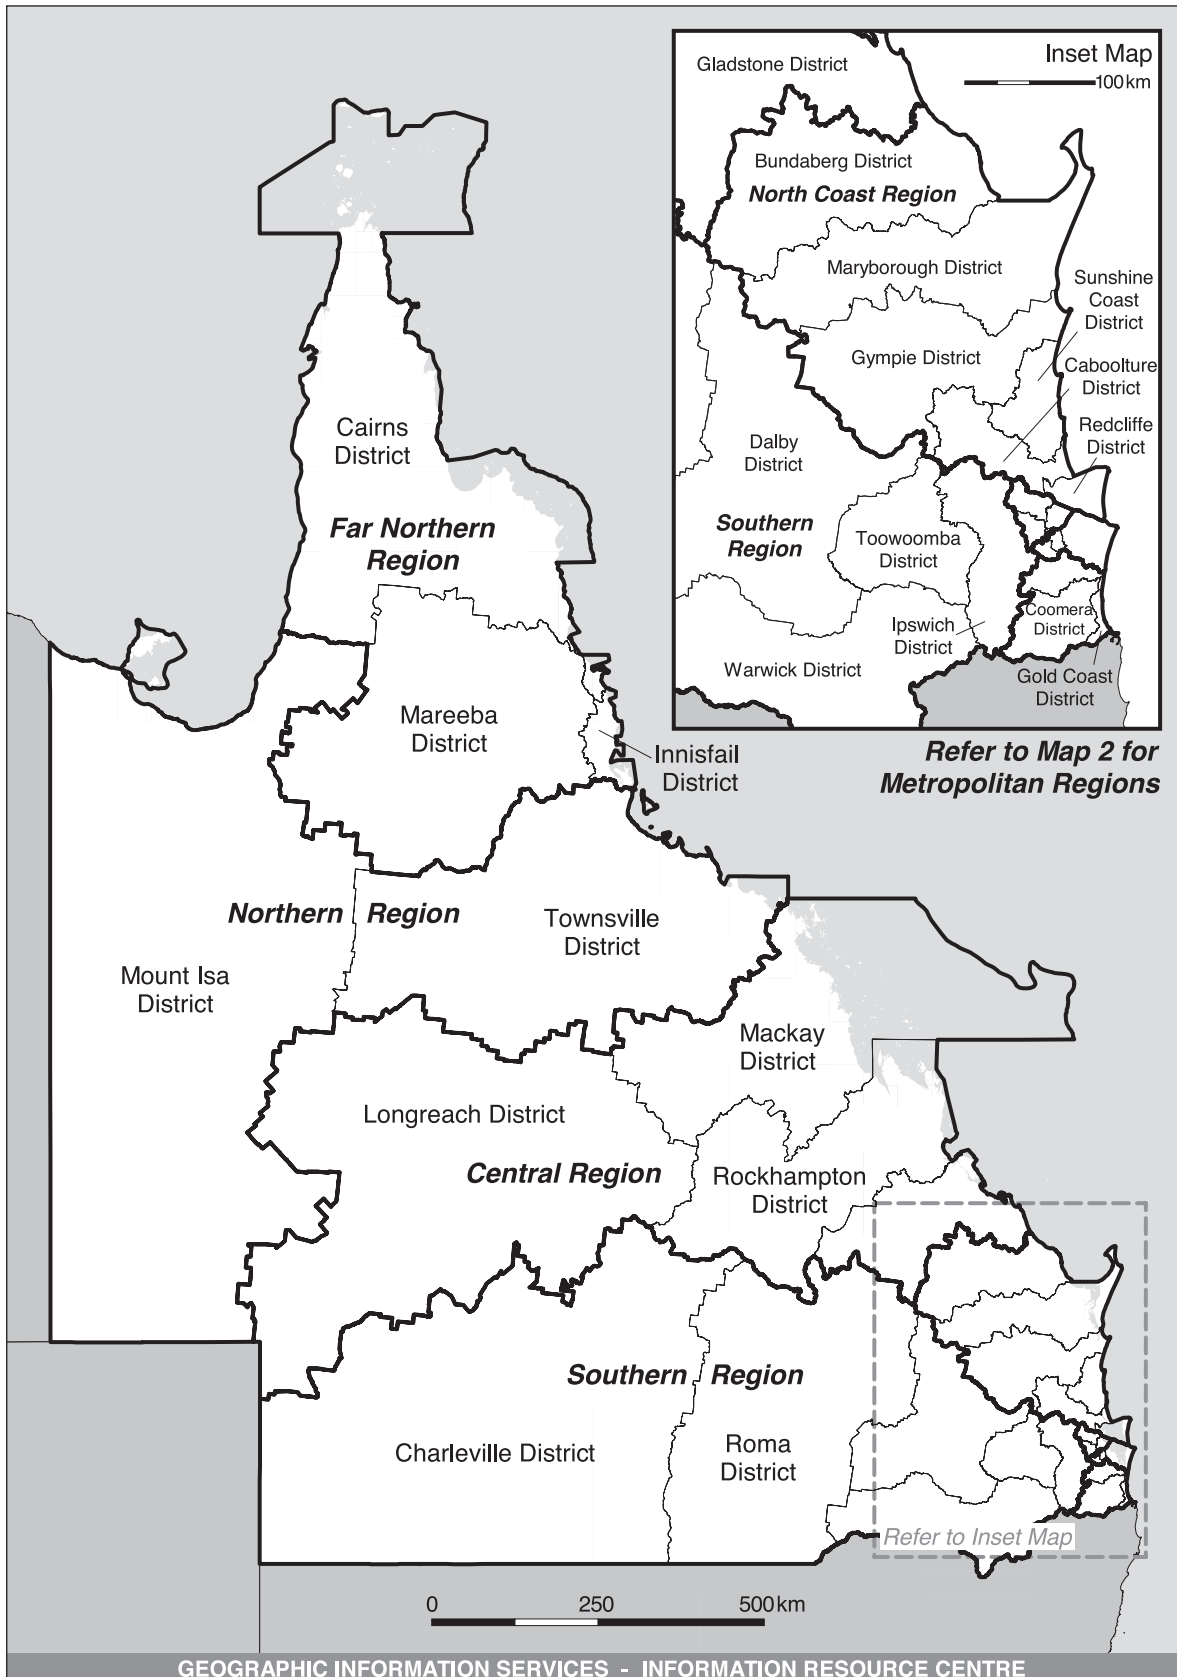

3 Staff Members include Public Service Officers, Police Liaison Officers, Communications Room Operators, Assistant Watchhouse Officers, Queensland ATSI Police and other Temporary and General Employees.

4 The region total for Actual Strength includes employees for Region Functions.

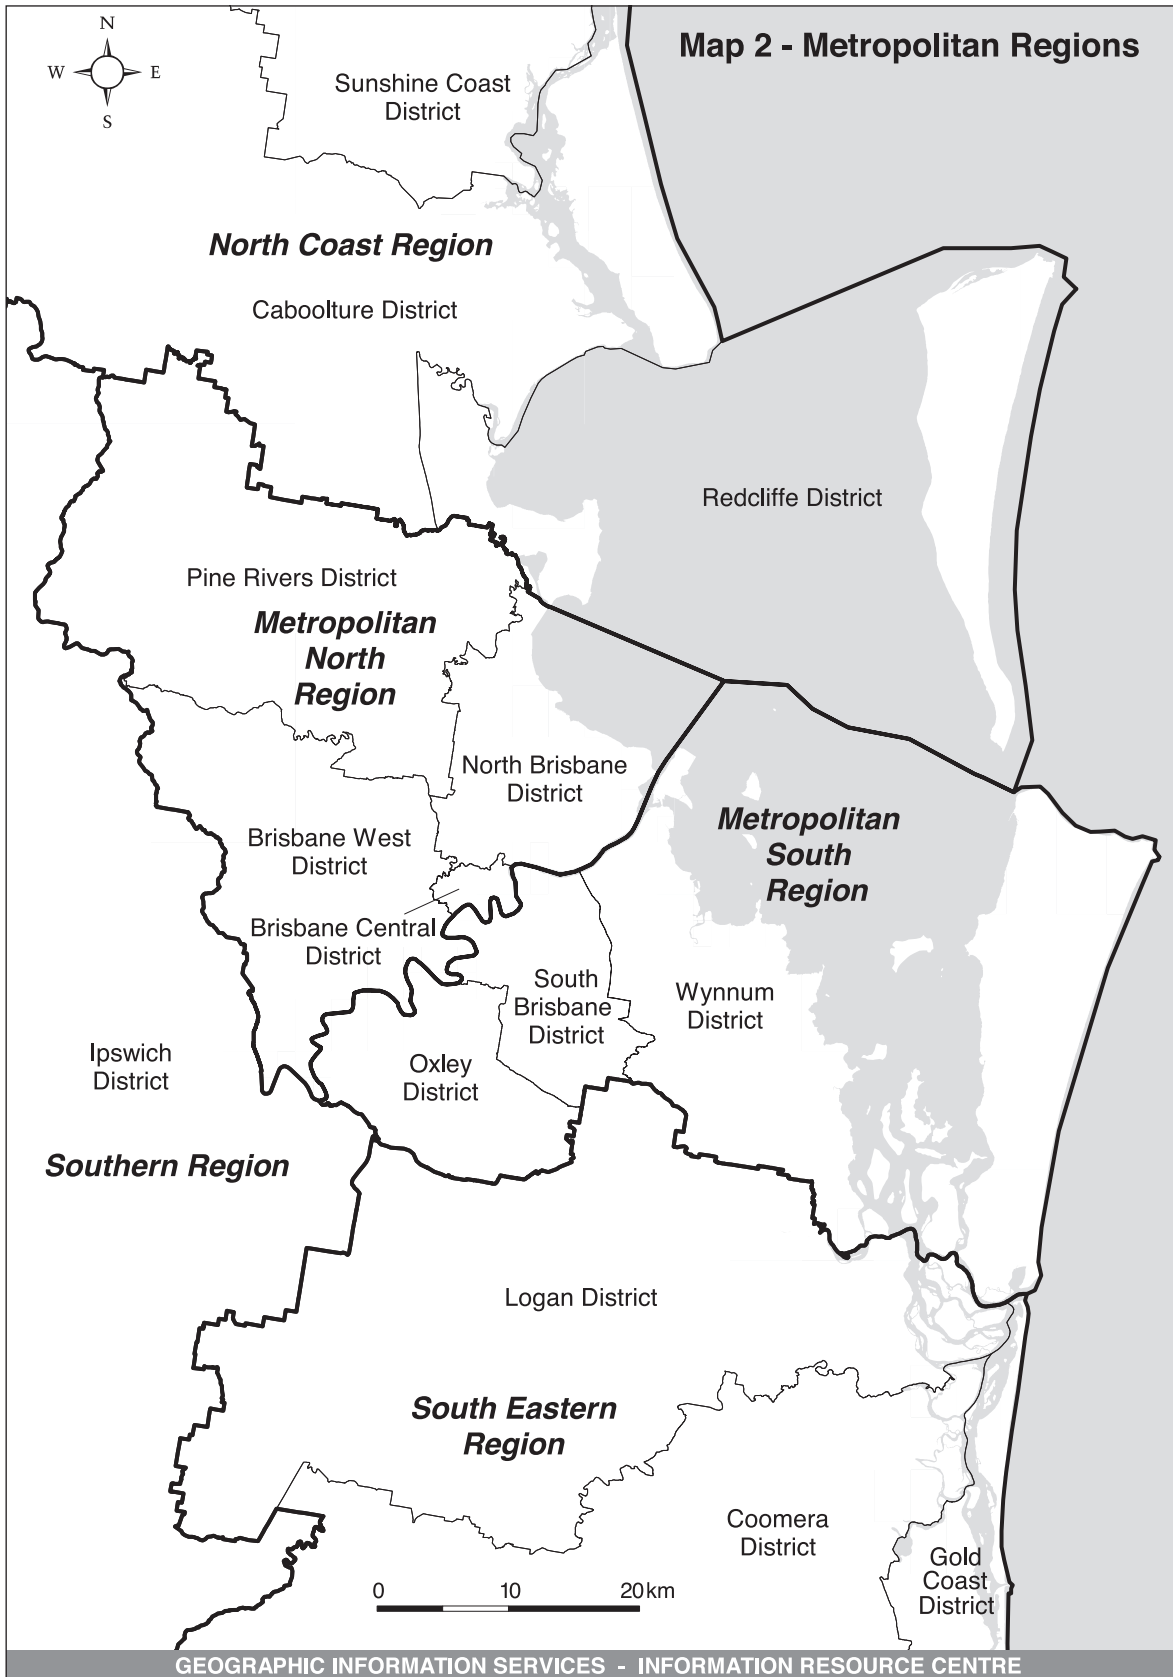

5 The Coomera District was created 2009/10 financial year. Hence, previous publications will not have figures for this area to for comparison purposes.

Note: The aggregate of district totals may not equal regional totals [see detailed explanation on page 105].

Police Regions and Districts

Metropolitan Regions and Districts

Explanatory Notes

The interpretation of police crime statistics is not a simple task. Before an appreciation for the value and utility of crime statistics is possible, it is necessary to understand the conventions and bounds of police crime statistics as well as the various external variables which may affect them. These include the procedures used by the Queensland Police Service (QPS) in the compilation and collation of crime statistics, the definitions and rules QPS follows in producing crime statistics, and the social and environmental factors that may have an impact on the statistics.

Once an understanding of the scope of police crime statistics is achieved, the value of the information they provide and its worth as a research and planning tool becomes evident. QPS strives to maintain absolute integrity and accuracy in the production of these statistics and publishes the Annual Statistical Review as its official public record of statistics pertaining to police, crime and related matters. To assist in using the information contained in this publication, a detailed summary of the above-mentioned definitions and conventions is provided over the following pages.

Reporting and Detection Rates

A major environmental factor that impacts on the use of police crime statistics as an indicator of total crime levels in Queensland is the level of reporting by the community.

The rate of crime reporting may vary according to many factors. This includes the perception by members of the community as to whether an offence has actually occurred, and whether the offence is reported by the victim or a community member to the QPS.

According to both Office of the Government Statistician (OGS) and Australian Bureau of Statistics (ABS) Surveys, the most common reason for not reporting crime was that the offence was considered too trivial. The second most common reason was that the victim doubted the police could or would take action.

Another factor which has a major impact on crime statistics is the priorities and activities of the QPS. An expansion of the Drug Squad, for example, may result in an enhanced ability to detect drug offences within Queensland. An increase in the number of drug offences recorded in police crime statistics may, therefore, be directly related to the

effectiveness of the Squad rather than an actual increase in drug offences in Queensland.

In order to gain a more comprehensive picture of the nature and extent of crime, QPS crime statistics should be examined in conjunction with information from other sources such as Victims of Crime surveys and criminological research.

Recording Offences

The crime statistics presented in this Review were derived from the Queensland Police Records and Information Management Exchange (QPRIME, 2007) database.

After becoming aware of an offence the reporting officer contacts the Information and Communications Technology Command (ICT), by telephone as soon as practicable. A twenty-four hour data entry service exists within ICT to facilitate this process. The offence is recorded, classified and counted by the data entry staff. This process provides the benefits of reducing police officers' administrative workloads as well as providing an accurate and immediate computerised record of crimes.

Crime Statistics Collection

Reference Period

For the purposes of this Annual Statistical Review, the reference period is the financial year, 1 July 2010 to 30 June 2011.

Reference Date

The reference date for reported offences is the date an offence is reported to or detected by police. For cleared offences, the reference date is the date the offence was cleared by police. For offender statistics the reference date is the date an action is commenced.

Data Source

Crime

All Queensland Police Service crime statistics are derived from the data contained in official crime reports.

Since June 2007, official crime reports have been recorded in the Queensland Police Records and Information Management Exchange (QPRIME). Crime reports recorded between December 1994

and June 2007 have been converted from Crime Recording Information System for Police (CRISP) to QPRIME.

Prior to December 1994 crime reports were derived from data entered into the crime statistics database maintained by the Statistics Section of the former Information Management Bureau (and its precursors).

“Cancelled” and “Not substantiated” or “unfounded” reports are excluded from QPS published crime statistics information.

Population

The population data used to calculate the number of victims and offenders by age and sex per 100,000 population was taken from Population by Age and Sex, Australian States and Territories June 2010 (ABS Catalogue No. 3201.0).

All other rate calculations throughout the publication are based on a projection of the Estimated Residential Population as at 30 June 2010 (for 2009/10) and 30 June 2011 (for 2010/11) as provided by the ABS and the Office of Economic and Statistical Research, Queensland.

Rates and Numbers

Methodology

Numbers of offences are simply the number of offences occurring (recorded by police) within a specific area and for a specified period of time. These are presented as simple counts. The problem with using crime numbers to gauge the true level of crime is that areas with larger populations will presumably have higher numbers of crime than areas with smaller populations.

Rates displayed in this publication are always presented per 100,000 persons. Calculation of rates allows direct comparisons of crime to be made across different geographical areas (State, regions and districts) and across time since the size of the population is taken into account in the calculation.

Rates are calculated as:

$$\frac{\text{No. of Reported offences}}{\text{Estimated Residential Population}} \times 100,000$$

Interpreting Rates and Numbers

It is important to note that transient population groups such as tourists are not factored into the estimated population. This would have particular impact on high tourism areas where crime rates would be overestimated.

Caution should be exercised when using either numbers or rates alone to measure crime in specific and different areas. Rates, for example, are sensitive to small populations. Both numbers and rates of reported offences have particular uses and should be presented together to give a clear and balanced picture of the level of crime.

Percentage changes are another type of rate which requires caution when interpreting. Small numbers of offences can result in large percentage changes.

Comparisons of crime rates over different areas should be interpreted with great caution due to the many factors which differ from community to community. The level of crime in any community is affected by the number and composition of its population, with particular reference to age, sex, ethnicity and employment. The climate and geographical features of the community are important as is the economic structure including the local industry and the level and distribution of income. The attitude of the public toward crime can also impact upon local crime levels.

Crime statistics for low volume offence categories tend to fluctuate randomly and dramatically from one year to the next. This can cause difficulties in the identification of trends and patterns in the levels of offences. It is, therefore, important to approach these low volume offence categories with caution when looking at trends and even when making comparisons across geographical areas.

Unreported Crime

QPS crime data can only relate to the offences which have been reported to police. Obviously, there is a large proportion of crime that is never reported. Various surveys, for example, Victims of Crime Surveys and Crime and Safety Surveys, are conducted by the ABS and by QPS to determine the level of unreported crime. The reporting rate can vary dramatically across offence types. For example, approximately 95 per cent of all motor vehicle theft is reported to police whilst only 33 per cent of sexual offences are reported. It is important to keep this in mind when using crime data. Relying on reported offences only can lead to an underestimation of the true rate of victimisation.

Offence Classification

The offence categories used by the QPS for crime statistics are based on the Australian National Classification of Offences (ANCO), prepared by the ABS. ANCO was designed to provide a national

framework for classifying offences for statistical purposes. The Australian Standard Offence Classification (ASOC) has been implemented in some jurisdictions by the National Centre for Crime and Justice Statistics of the ABS, and will eventually supersede ANCO. However, the QPS crime statistics collection will continue to be based on ANCO.

Crime statistics are presented under three broad offence divisions: offences against the person; offences against property; and other offences. These three primary divisions have been developed to facilitate the understanding of crime statistics by grouping similar offence categories together. Following are the offence sub-divisions located within each of these primary categories.

Offences Against the Person

The offence division of offences against the person includes the following offence sub-divisions: homicide (murder), other homicide; assault; sexual offences; robbery; and other offences against the person.

Offences Against Property

The offence division of offences against property includes the following offence sub-divisions: unlawful entry with Intent; arson; other property damage; unlawful use of motor vehicle; other theft (excluding unlawful entry); fraud; and handling stolen goods.

Other Offences

The offence division of other offences includes the following offence sub-divisions: drug offences; prostitution offences; liquor (excluding drunkenness); gaming, racing and betting offences; breach of domestic violence protection orders; trespassing and vagrancy; weapons act offences; good order offences; stock related offences; traffic and related offences; and miscellaneous offences.

Many offence sub-divisions are divided into offence groups and then offence sub-groups. Reported and cleared offence statistics in this publication are presented to a group level in most sections.

Geographical Classification

Queensland crime statistics are compiled to four hierarchical geographical levels. Firstly, statistics are compiled for the State as a whole. Below this, QPS divides the state into eight statistical regions. The next geographical level is that of statistical

districts, of which there are 31 throughout the State. Finally, these districts are divided into 337 statistical divisions. Reported and cleared offence statistics are presented at State, Regional and District levels in this Review.

Counting Methodology

The counting rules used by the QPS in the collection and collation of crime statistics are based on the guidelines published in the National Crime Statistics Manual (ABS) and as amended from time to time by the National Crime Statistics Advisory Group.

The national counting rule is that for each victim within a distinct criminal incident, the Most Serious Offence (MSO) per ANCO subdivision is counted. The national data set does not include 'victimless' offences such as those detailed in the QPS division of other offences. The QPS counting rule for offences of this type is to count each distinct criminal act per criminal incident.

Where the victim based rule applies, the description of a victim varies according to the type of offence. A victim may be an individual person, an organisation, a place/premise, or a motor vehicle (refer to Glossary for definition of victim).

The application of the MSO rule has major implications for the recording of crime statistics. By applying the MSO rule a single criminal incident may result in a number of offences being recorded. For incidents where the same victim is subjected to multiple offences belonging to different subdivisions, one offence, the most serious, is counted within each subdivision. For example, if a person is kidnapped and then raped by two offenders, one kidnapping/abduction/deprivation of liberty and one rape would be counted.

Exceptions to Counting Rules

The offence subdivision of sexual offences (which includes rape and attempted rape and other sexual offences) is an exception to the national counting rule. The counting rule applied by the QPS in respect of this group of offences is that for each victim the MSO per ANCO subdivision is counted on the basis of time and place.

The effect of using this rule is that if a victim is subjected to numerous sexual offences over a long period of time by one offender and these actions come to the attention of police at one point in time, the MSO per separate incident based on time and place is counted. Therefore, it is only possible to identify the number of offences, not victims, of sexual offences. A count of ten sexual offences may mean that there were ten victims

or that one victim was subjected to ten offences over an unspecified time period by one or more offenders.

Fluctuations in the number of reported offences for this offence category must therefore be considered with caution, due to the effects of the current counting rule.

Victims of Crime

The Victims of Crime statistics presented in this Review are compiled on the basis of one victim per counted offence. The statistics do not provide a unique victim count. For example, where the same victim is subjected to multiple offences belonging to different offence sub-divisions within an incident, then in accordance with the MSO rule, that victim would be recorded for each most serious offence per sub-division.

It is important to remember that these statistics are derived using a system whose primary function is to service operational policing. Consequently, there may be slight variations between offence and victim counts.

Statistics relating to victims of offences against property are not included. This is due to the statistical definition of 'victim' used by the QPS, that is, a victim may be an individual person, an organisation, a place or premise, or a motor vehicle (refer to Glossary).

Offences included in the other offences division are also excluded, as these offences are usually deemed to be 'victimless' offences.

There are several offence groups in offences against the person where the victim may be an organisation rather than an individual person. Examples include robbery committed upon a banking institution or business, and extortion committed upon organisations. It should be noted that these offences are not included in the victim count.

Offender Counting

Offender statistics are based on offence counts and do not and can not refer to individuals. The data refers to the number of offences cleared or solved through an action against an offender. As such, offender data does not equate to a unique offender count and nor does it equate to the number of offences cleared. For example, an offender charged with motor vehicle theft, unlawful entry, assault and other theft would be included four times in any offender breakdown by age and sex.

Only persons aged ten years and over are deemed to be offenders. Under Queensland law, children under ten years of age are not held criminally responsible, although they may be involved in the commission of an offence. Juvenile offenders are those aged between and including ten and sixteen years.

Offenders have not been included if their age and sex is not specified in QPS records. Less than 1% of offenders have been excluded for this reason.

Drink Driving Offences

Examples of significant events affecting the drink driving time series include:

- 20/12/1982 - Legal limit for blood alcohol concentration lowered to 0.05%;
- 04/05/1985 - Legal blood/alcohol limit for persons under 18 years lowered to 0.02%;
- 1986/87 - Reduce Impaired Driving (RID) campaign introduced;
- 01/01/1989 - Random Breath Test (RBT) formally commenced;
- 04/10/1991 - First two Mobile Breath Stations (Booze Buses) introduced.

Drug Enforcement Region

Offences detected or under investigation involving covert drug operations or sensitive issues such as sexual child abuse are not geographically classified until after the completion of all inquiries in the interest of strict confidentiality. For this reason, a temporary holding geographical classification, the Drug Enforcement Region, has been created. Offences classified to this area are included only in Queensland offence counts in this Review.

Other property damage - Change in Policy

In December 2001, the Service implemented a change in policy in regard to the reporting of other property damage offences. Prior to this change, the offence of wilful damage was automatically recorded in conjunction with some unlawful entry and unlawful use of motor vehicle offences. As damage to property is an intrinsic part of break and enter offences, the Service altered the policy so that the offence of wilful damage is no longer recorded with these offences.

Offence

For statistical purposes an offence is any act reported to or becoming known by the police, which they consider, prima facie, to be in breach of the criminal law. With the exception of murder, each offence count represents an actual offence, an attempted offence, a conspiracy, or the aiding or abetting of an offence. In the case of murder, these categories are distinguished.

Reported Offences

Reported offences refer to all established offences reported to or becoming known to the police within the relevant reference period.

Not Substantiated

An offence is “*not substantiated*” or “*unfounded*” when investigation has established that the alleged offence was not in fact committed. This includes a false report, a mistake in the facts as reported by the informant, or no breach of the law involved in the alleged offence.

Inability to prove an ingredient of an offence does not make an offence “not substantiated” nor does a decision by a complainant not to proceed after the offence has been reported.

Cleared Offences

An offence is deemed to be cleared under, but not restricted to, the following circumstances:

- At least one offender has been arrested or summonsed or issued with a notice to appear,

or information has been laid to compel an offender’s appearance before a court;

- Action has been taken against at least one offender under the provisions of the *Juvenile Justice Act 1992* (e.g. administration of an official caution, summons or reference to a community conference);
- At least one offender has been dealt with in accordance with Queensland Police Service policy (e.g. informal counselling of children and elderly persons);
- The offender has admitted the offence but there is an obstacle to proceedings (e.g. diplomatic immunity);
- The offender is known and sufficient evidence has been obtained, but the complainant refuses to prosecute;
- The offender is in another jurisdiction and extradition is not desired or not available;
- The offender is serving a sentence and no useful purpose would be served by prosecution;
- The offender has died before proceedings can be commenced;
- The offender has been admitted to a mental institution before charges are laid and release is unlikely;
- The offender is being offered drug diversion for a minor drug offence;
- There is some other bar to prosecution;
- The offender is dealt with by ex-officio indictment;
- The offender is being dealt with by another agency apart from QPS (e.g. Marine Brief of evidence, Family, Youth and Community Care);
- The complainant or essential witness has died and proceedings would be abortive;
- Following a complaint the complainant has requested that police take no further action;

The recovery of stolen or otherwise unlawfully obtained property, e.g. a motor vehicle, does not in itself clear or solve an offence.

Number of Offences Cleared

Cleared offences are presented in this publication in two groups, i.e., those that were both reported and cleared in the reference period, and those that were cleared in the reference period but reported previously.

Percentage Cleared

Percentage Cleared is the percentage of offences that were reported within a specified period that were also cleared within that period.

Offender

An offender is any person who, through the clearance of an offence, is deemed to be responsible for committing that offence.

Action Type

The following definitions apply to the action types presented in the tables appearing on pages 86 and 87, Offenders, Indigenous/Non Indigenous - Queensland by Type of Action by Age:

- Arrest: The taking into custody of an offender to compel that person's appearance before a court;
- Summons: A direction or command issued by a magistrate or justice to an offender to appear before a court with reference to a matter described therein, at a given time and place;
- Notice to appear: A notice issued and personally served by a police officer upon an offender whom he/she reasonably suspects has committed or is committing an offence, to appear before a court, with reference to a matter described therein, at a stated time and place;
- Warrant: For the purposes of this application, a warrant is an authority under the hand of a judge or justice to arrest an offender in order that the person may be dealt with according to the law;
- Caution: An official caution administered to a child under the provisions of the *Juvenile Justice Act, 1992* and includes the cautioning of persons over 65 years of age and intellectually disabled persons for minor criminal offences in accordance with official Service policy. The term does not apply to any informal process where a child is spoken to by an officer where the officer is exercising discretion in relation to the child's particular behaviour or actions;
- Community Conference: The referral of a child under the provisions of the *Juvenile Justice Act, 1992* to community conference by a police officer before the start of a proceeding for an

offence, or by court after a finding of guilty is made against a child for the offence;

- Other: The offender is known and sufficient evidence has been obtained but there is a bar to prosecution or other official process (see also definition of Cleared offences on the previous page).

Victim

The description of a victim varies according to offence type:

- for homicide, assault, sexual offences and other offences against the person subdivisions, the victim is an individual person;
- for robbery, extortion, arson, other property damage, stealing (excluding motor vehicles), and fraud, the victim may be either an individual person or an organisation;
- for motor vehicle theft, the victim is the motor vehicle;
- for offences of unlawful entry, the victim is the place/premise as defined on the basis of occupation/ownership.

Crime Location

The crime location is the initial site where a criminal incident occurred, classified by the primary function of that site where the site has more than one function.

Indigenous Identification

In January 2003 it became mandatory for Queensland police officers to ask all offenders the question: Are you of Aboriginal or Torres Strait Islander origin? It is the choice of the person being asked this question to identify their origins as either of the following four: Not Aboriginal or Torres Strait Islander, Identifies as Aboriginal, Identifies as Torres Strait Islander, Identifies as Aboriginal and Torres Strait Islander. If identification has not been made, a reason is recorded within the occurrence.

In the 2010/11 financial year, the indigenous status indicator has not been captured in approximately 10% of cases. In these instances, the indigenous indicator has been applied by extracting the indicator from previous identifications. When applying this methodology, the percentage of unidentified indigenous status was reduced to approximately 4%.
