Commissioner's Foreword

The *Queensland Police Service Annual Statistical Review 2011/12* provides a comprehensive record of crime statistics for Queensland. It includes information on levels of reported and cleared crime, traffic related matters and police personnel. The Statistical Review is a key component of the Service's overall performance management and accountability framework.

The Statistical Review also has a strategic role. In order to help ensure the safety and security of Queenslanders, the Service continues to formulate relevant and innovative policing strategies. The information contained in the Statistical Review supports evidence based, strategic decision making.

This year's Statistical Review reported a 6% increase in the State's overall crime rate when compared with the previous year.

Key outcomes for 2011/12 when compared to 2010/11 include:

- 2% increase in the rate of total offences against the person;
- 6% increase in the rate of total offences against property; and
- 6% increase in the rate of total other offences.

Of the six categories in offences against the person three recorded decreases. Homicide (murder) 20%, other homicide 12%, and sexual offences 9%. The categories that recorded increases were assault 5%, robbery 1% and other offences against the person 5%.

The following categories of offences against property reported increases, unlawful entry 5%, arson 24%, other property damage less than 1%, unlawful use of motor vehicle 22%, other theft (excl. unlawful entry) 9% and handling stolen goods 12%. The only category to record a decrease was fraud 11%. This resulted in the overall rate increase in offences against property of 6%.

In the other offences group increases were reported in drug offences 10%, breach domestic violence protection orders 8%, trespassing and vagrancy 8%, weapons act offences 9%, good order offences 6%, traffic and related offences 2%, miscellaneous offences 8%. The remaining categories that reported decreases were prostitution offences 8%, liquor (excluding drunkenness) 9% and stock related offences 14%, with gaming racing and betting offences recording no change. These offences (with the exception of domestic violence) are generally detected by police rather than reported by the public.

Over the ten year period 2002/03 to 2011/12, the State has recorded decreases in the rate of offences against the person (19%) and offences against property (30%) which has resulted in a decrease of 17% in the overall crime rate.

Bob Atkinson APM, Commissioner of Police

The Queensland Police Service is committed to working collaboratively with other agencies and the community to prevent, solve and reduce crime and to ensure the continued safety and security of all Queenslanders into the future.

We are committed also to identifying causal factors and support a holistic approach to these issues.

Whilst the results reported in this year's Statistical Review reflect increases in certain areas the efforts and commitment of all members of the Service, in my view is undiminished for which I am very grateful.

Bob Atkinson APM
Commissioner

Queensland Crime

The following tables provide statistics for Queensland for the 2010/11 and 2011/12 financial years, for reported and cleared offences against the person and offences against property and reported other offences.

Reported offence data are presented as both numbers and rates (offences reported per 100,000 persons), together with a percentage change indicator to provide the reader with a clear and balanced picture of the level of crime in Queensland.

Cleared offences are displayed as 'Reported and Cleared in Period' and 'Cleared in Period, Reported Previously'. The 'Percentage Cleared' figures refer only to those offences reported and cleared in the relevant financial year.

The 2010/11 statistics included in these tables (and throughout the Review) have been revised from those published in last year's Annual Statistical Review and, as such, figures presented last year may differ slightly from those presented in this edition.

** Community By-Law offences cannot be separated into offences with and without violence. As such, sub-categories may not add to the total.

Recovery of a motor vehicle does not in itself clear an offence of Unlawful Use of Motor Vehicle (UUMV) (see Glossary, page 169). The recovery rate for Queensland for the 2011/12 financial year was approximately 83%. This category includes attempts.

Crime 2011/12

Offences Against the Person

The broad offence group of offences against the person is comprised of a number of different offence categories, with the volume of offences reported differing significantly across categories. For example, assaults account for 66% of offences against the person (Figure 1) while homicide (murder) accounts for less than 1%. Thus, assault offences tend to dominate offences against the person, while homicide (murder) will have little effect on the overall total.

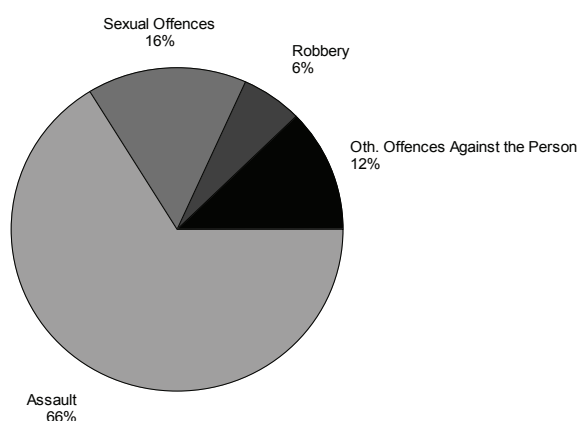

Figure 1: offences against the person (%) - 2011/12

Overall, the number of offences against the person increased by 3% in Queensland between 2010/11 and 2011/12. A total of 30,768 offences were reported to police in 2011/12, 999 more than the revised figure from the previous financial year. Taking into account the growth of the Queensland population, the rate of offences against the person increased by 2% from 665 to 680 offences per 100,000 persons.

Of the 30,768 offences against the person reported to police during the 2011/12 financial year, 22,800 (74%) were cleared by the end of June 2012 compared with 75% cleared the previous year. An additional 3,495 offences reported in previous time periods were also cleared during 2011/12.

As with previous years, North Queensland (Far Northern and Northern Regions) recorded the highest rates of offences against the person, while Metropolitan South Region recorded the lowest.

Fifteen to nineteen year old females were most likely to have been victims of offences against the person in 2011/12 followed by ten to fourteen year old females. From the age of twenty years, males were more likely than females to be victims. For 61% of victims of solved offences, the offenders were known to them.

More males were proceeded against for offences against the person compared with females. Males accounted for 77% of offenders, with 30% of all offenders being male aged fifteen to twenty four years. The likelihood of offending peaked in the fifteen to nineteen year age group for both males and females and decreased with increasing age.

Of those who were found to have committed offences against the person, approximately 56% were proceeded against through an arrest with a further 25% proceeded through the issue of a notice to appear.

Homicide (Murder)

Homicide (murder) is a small volume offence category and, as such, is subject to sizeable fluctuations from one year to the next and from region to region.

The number of homicide (murder) offences decreased by 10 offences in Queensland for 2011/12 compared with 2010/11. Of the 42 homicides reported to police in 2011/12, 34 (81%) were cleared in the same period. An additional 7 offences were cleared from previous periods.

Metropolitan South Region recorded the highest increase and Central Region recorded the largest decrease of homicide (murder) offences within the State. The highest rate was recorded by South Eastern Region and the lowest rate was recorded by Central Region.

This year, 68% of the victims of homicide (murder) were male. The highest rate of homicide (murder) offences occurred for males in the twenty to twenty four year age group which recorded a rate of 4 offences per 100,000 persons. In 59% of solved cases, the offender was known to the victim.

Males were significantly more likely than females to commit homicide (murder) (84%). In 2011/12, males aged twenty to twenty four years were most

likely to offend. In 95% of cases, the offender was proceeded against through an arrest.

Other Homicide

As with homicide (murder), other homicide is a low-volume offence category. Therefore, it is subject to marked fluctuations from year to year and from area to area. The number of other homicide offences decreased by 11% during 2011/12, as a result of decreases in attempted murder (3 offences) and driving causing death (7 offences).

Factoring in the increase of the Queensland estimated resident population, other homicide offences decreased by 12% to a rate of 1 offence per 100,000 persons. Of the 65 offences reported to police in 2011/12, 56 (86%) were cleared in the same period. Additionally, 16 offences were cleared from previous periods.

Central Region reported the highest rate of other homicide offences while Southern Region recorded the lowest rate as well as the largest decrease in the State.

Just over two-thirds (73%) of the victims of other homicide were male with the highest rate recorded in the twenty to forty four years age group. For every age group, except twenty to twenty four years, males were more likely to be victims than females. In 58% of the solved cases, the offender was known to the victim.

Males were significantly more likely than females to commit other homicide offences (81% of offenders were male). In 2011/12, males aged twenty to twenty four years were most likely to offend. Sixty nine percent of offenders were proceeded against through an arrest, while 25% were issued with a notice to appear.

Assault

Assaults comprise approximately 66% of total offences against the person. As such, they tend to dominate this broad offence group. The number of assaults in Queensland increased by 6% from 2010/11 to 2011/12. This equates to a rate of 449 offences per 100,000 persons in 2011/12.

The overall increase in the rate of assaults is attributable to increases in serious assault, serious assault other and common assault. Of the 20,331 assaults reported to police in 2011/12, 15,692 (77%) were cleared in the same period with a further 2,152 offences cleared from previous periods.

Figure 2: Reported assaults, Queensland, 2007/08 to 2011/12

Higher rates of serious assault were seen in 2011/12 (Figure 2). A possible explanation for this is a broadening of the definition of serious assault to include, for example, assault of a person aged sixty years or more, assault on physically impaired people and assaulting a police officer in the execution of their duty.

As with previous years, Far Northern and Northern Regions recorded the highest rates of assault in the State while Metropolitan South Region recorded the lowest. Metropolitan North Region recorded the only decrease in the rate of assault.

For all age groups, except fifteen to nineteen years, males were more likely than females to be victims of assault. Males aged twenty to twenty-nine years were most likely to be victims. From age thirty for males and nineteen for females, the rate of victimisation decreased steadily with increased age. For 60% of victims of solved offences, the offender was known to them.

Across all age groups, males were also more likely to commit offences of assault (73% of offenders were male). Males aged fifteen to nineteen years were most likely to offend. Of those people proceeded against, 52% were arrested and 30% were issued with a notice to appear.

Sexual Offences

Sexual offences are particularly affected by an unpredictable variability in the reported rates due to the fact that offences occurring decades ago are still being reported to police. As offences are counted against the period in which they are reported, rather than when they occurred, increases in crime statistics do not always equate to an increase in victimisation.

The number of sexual offences reported to police in 2011/12 decreased by 8% from the number reported in the previous financial year. The

number reported equates to a rate of 105 offences reported per 100,000 persons. The decrease in the rate is attributable to a decrease of 9% in rape and attempted rape and 8% in other sexual offences. Of those offences reported in 2011/12, 3,551 (75%) were cleared within 2011/12, with an additional 816 offences cleared from previous periods.

Six of the eight regions recorded decreases in sexual offences with North Coast Region recording the largest decrease of 22%. Metropolitan North Region recorded the lowest rate in the State.

The Sexual Offence category is one of two offence categories for which there are more female victims than male (85% of victims were female). Females aged between ten and nineteen years were most likely to be victims of sexual offences. Females in this age group comprise 48% of total victims. For 74% of victims of solved offences, the offender was known to them. In 33% of solved cases, the offender was a family member.

In total, 102 females committed sexual offences in 2011/12 accounting for only 5% of all offenders. The age distribution of male offenders is unique for this offence type in that the distribution is almost uniform across all age groups with the exception of fifteen to nineteen year olds. The number of offenders is only slightly lower in the older age groups, with males aged fifty years and over representing 16% of all sexual offenders. For those proceeded against, 57% were arrested and 11% were issued with a notice to appear.

Robbery

An overall increase of 2% in the number of robbery offences was reported to police in 2011/12. This result was due to a 13% increase in armed robbery offences within the reporting period. A total of 1,816 offences were reported to police, which equates to a rate of 40 offences per 100,000 persons. Of these, 1060 (58%) were cleared in the period in which they were reported, with an additional 129 offences cleared from previous periods.

The rate of robbery offences reported to police in 2011/12 increased by one per cent. The rate of reported armed robbery recorded a 12% increase while unarmed robbery recorded a decrease of 9% (Figure 3).

Figure 3: Reported robbery offences, Queensland, 2007/08 to 2011/12

Robbery offences tend to occur more frequently in the south-east corner of the State as was the case in 2011/12. South Eastern Region reported the highest rate of robbery offences in the State, despite recording the largest decrease in robbery offences. Central Region recorded the largest increase of 36% and North Coast Region recorded the lowest rate in the State.

For every age group, except forty five to forty nine, males were more likely than females to be victims of robbery, with males aged fifteen to nineteen years most likely to be victims. Males were victim of robbery offences in 72% of all cases reported to police. For the majority of victims (82%) of solved robbery offences, the offender was unknown to them.

Males were significantly more likely than females to commit robbery offences (85% of offenders were male) and 73% of total offenders were aged between fifteen and twenty-nine years. Of those proceeded against for robbery offences, 86% were arrested and 8% issued with a notice to appear.

Other Offences Against the Person

The category of other offences against the person includes offences such as kidnapping and abduction, deprivation of liberty, extortion, stalking and life endangering acts.

In 2011/12, other offences against the person increased by 6% from 3,548 to 3,774 offences. When taking into account the growth of Queensland's population, the rate increased by 5%. Of the 3,774 reported other offences against the person, 64% were cleared in the same period. In addition, 375 offences reported in previous periods were also cleared.

Females represented 51% of victims of total other offences against the person. People most likely to be victims of other offences against the person were female and aged between fifteen and nineteen years and males aged between zero and four years. For 65% of victims of solved offences, the offender was known to them.

Offences Against Property

The offence group of offences against property is comprised of a number of offence categories. As with offences against the person, the contribution of each category to the total differs significantly (Figure 4). In 2011/12, other theft (excl. unlawful entry) accounted for 47% of total offences against property and was the highest in volume of the property offence categories. Unlawful entry with intent accounted for 20%, other property damage accounted for 19% of offences, with fraud accounting for 6%. As such, this broad offence group tends to be dominated by other theft (excl. unlawful entry) and unlawful entry with intent, with offence categories such as arson having little effect.

The number of reported offences against property for the 2011/12 period increased by 7% when compared with the 2010/11 period. Factoring in the growth of the Queensland population, offences against property were reported at a rate of 5,101 offences per 100,000 persons in 2011/12, an increase of 6% from the previous year. Of all offences against property reported in 2011/12, 30% were cleared in the same period with a further 4% offences cleared from previous periods.

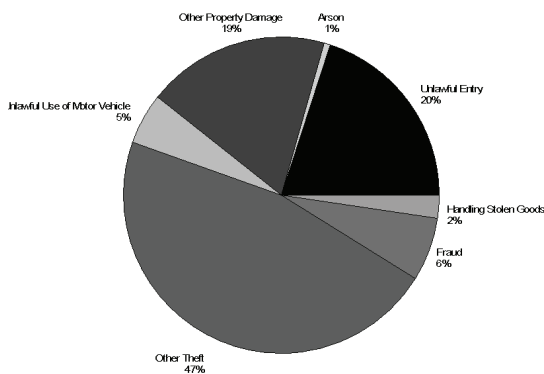

Figure 4: offences against property (%) - 2011/12*

Footnote: * Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%..

Northern Region recorded the highest rate of offences against property (6,615 offences per 100,000 persons) in the State, while North Coast Region recorded the only decrease (2%) and the lowest rate (3,980 offences per 100,000 persons).

Overall, offences against property were more likely to be committed by males (76% of offenders were male). Over one quarter (28%) of offenders proceeded against for offences against property were male aged between fifteen and nineteen years. Of the total people proceeded against for offences against property, 42% were arrested, 43% were issued with a notice to appear and 10% were cautioned.

Unlawful Entry

The number of unlawful entry offences increased by 6%. This equates to a 5% increase in the rate once the growth of the Queensland population is taken into account. Of the 45,710 offences reported to police in 2011/12, 20% were cleared in the same period with a further 1,635 offences cleared from previous periods.

The number of unlawful entry of dwellings increased by 12%, the number of unlawful entry of shops decreased by 5% and unlawful entry of other premises remained stable.

Northern Region recorded the highest rate (1,494 offences per 100,000 persons) while North Coast Region recorded the lowest rate (694 offences per 100,000 persons). Far Northern Region recorded the largest increase of 21% in the period under review.

Most unlawful entry offences were committed by young males. In fact, 89% of offenders were male and approximately 64% were male aged under twenty-five years. Of all offenders proceeded against for unlawful entry offences, 60% were arrested, 11% cautioned and 22% issued with a notice to appear.

Arson

Arson is the lowest in volume of the offences against property categories and, as such, exerts very little influence on the offences against property total. Arson offences increased by 26% from 2010/11 to 2011/12. The rate of offences increased by 24%, from 27 to 34 offences per 100,000 persons. Of the 1,536 offences reported in 2011/12, 278 (18%) were cleared in the same period. An additional 33 offences were cleared from previous periods.

Metropolitan North Region recorded the only decrease (14%), and also recorded the lowest rate (12 offences per 100,000 persons). Similar to previous years, South Eastern Region recorded the highest rate (77 offences per 100,000 persons) and also reported the largest increase in the period under review.

This year, 87% of offenders were male with fifteen to nineteen year old males being the most likely to be proceeded against for arson. Approximately 59% of offenders were arrested, 16% cautioned and 12% issued with a notice to appear.

Other Property Damage

The number of other property damage offences reported in 2011/12 increased by 2% when compared to the previous financial year, however the rate of offences per 100,000 persons remained stable. Of those offences reported to police in 2011/12, 13,523 (32%) were cleared during this period, with an additional 1,672 offences cleared from previous time periods.

Northern Region recorded the highest rate of 1,346 offences per 100,000 persons. The largest decrease was recorded by Metropolitan North Region (20%) and Metropolitan South Region recorded the lowest rate of other property damage offences (745 offences per 100,000 persons).

As with most offence types, fifteen to nineteen year old males were most likely to be proceeded against for other property damage offences. Only 13% of offenders were female and only 16% of offenders were aged thirty years or more. In total, 35% of offenders were arrested for this offence type, 11% were cautioned and 48% were issued with a notice to appear.

Unlawful Use of Motor Vehicle

The rate of unlawful use of motor vehicle offences increased by 22% in 2011/12 which equated to 2,270 more offences reported during 2011/12 when compared to 2010/11.

In 2011/12, 11,979 unlawful use of motor vehicle offences were reported to police. Of these, 3,971 (33%) were cleared during this period, with an additional 570 offences cleared from previous periods (note: for recovery rates see Glossary, page 169). In 2011/12, unlawful use of motor vehicle offences were reported at a rate of 265 offences for every 100,000 persons.

South Eastern Region recorded the highest rate of these offences while Northern Region recorded the largest increase. The lowest rate of 146 offences per 100,000 persons was recorded by North Coast Region.

Males aged fifteen to nineteen years were most likely to commit unlawful use of motor vehicle offences (49% of male offenders were in this group). Forty eight percent of all offenders were

aged fifteen to nineteen years. Approximately 67% of offenders were arrested and 22% were served with a notice to appear.

Other Theft (excluding Unlawful Entry)

Other theft (excluding unlawful entry) offences increased by 11% from 2010/11 to 2011/12. This category is the highest in volume of the offences against property categories and thus exerts a significant influence on property crime as a total. In 2011/12, 108,476 other theft offences were reported to police, of which 27% were cleared during this period. A further 3,534 offences were cleared from previous periods.

All of the four sub-categories of other theft offences recorded increases in the number of offences reported: stealing from dwellings (4%), shop stealing (3%), steal from vehicles (4%), and other stealing (20%). Approximately 71% of shop stealing offences were cleared during the 2011/12 period, making this the highest clearance rate within the other theft sub-categories.

The highest rate of other theft (excluding unlawful entry) offences occurred in South Eastern Region while the lowest rate was recorded in Central Region in the year under review. Northern Region recorded the highest increase (21%) of other theft (excluding unlawful entry) offences during 2011/12.

Males were significantly more likely than females to commit other theft offences (67% of offenders were male). For both males and females, those in the fifteen to nineteen year age group were most likely to commit other theft offences. Arrest rates are low for this offence type at 32%, while 51% were issued with a notice to appear and 13% (mostly juvenile) were cautioned. Ninety seven percent of all offenders cautioned were juvenile (i.e. aged between ten and sixteen years).

Fraud

Queensland recorded a decrease in the number of offences per 100,000 persons in most sub-categories of fraud offences during the current period: fraud by computer (64%), fraud by cheque (23%), and other fraud (9%). This resulted in an overall decrease of 11% in total fraud offences. Fraud by credit card and identity fraud offences recorded increases of 25% and 12% respectively in 2011/12.

Of the 14,916 offences reported in 2011/12, 8,707 (58%) were cleared in the same period with a further 2,167 offences cleared from previous periods.

Metropolitan North Region recorded the highest rate of fraud offences while Far Northern Region recorded the lowest rate. North Coast Region recorded the largest decrease and the greatest increase was recorded by Metropolitan North Region.

A relatively higher proportion of females commit fraud offences compared with other offence types with 37% of offenders being female. Males aged twenty five to twenty nine years and females aged twenty to twenty four years were most likely to commit fraud offences. Thirty five percent of offenders were arrested, while 58% were issued with a notice to appear.

Handling Stolen Goods

Handling stolen goods offences recorded an increase of 14% in the number of offences reported. The rate of offences increased by 12%, from 104 to 117 offences per 100,000 persons. Of the total 5,273 offences reported to police in 2011/12, 4,750 (90%) were cleared in the same period, with a further 230 offences cleared from previous periods.

Far Northern Region recorded the highest rate of handling stolen goods offences while Metropolitan South Region recorded the largest increase (45%). North Coast Region recorded the lowest rate and also recorded the greatest decrease (12%) in the year under review.

As with most offence categories, males were most likely to commit handling stolen goods offences (75% of offenders were male) and males in the fifteen to nineteen year age group were most likely to offend. Offenders were more likely to be issued with a notice to appear for handling stolen goods offences.

Other Offences

Other offences is a broad collection of disparate offence categories. These categories are distinct from offences against the person and property in that they are generally offences detected by police rather than being reported by the public. Drug offences, traffic offences and prostitution offences are examples of this. Trends and patterns in the levels of other offences are therefore often indicative of specific initiatives of the Police Service rather than being indicative of the level of crime

actually occurring. As such, increases are often seen as a positive improvement of police detection rates.

As a total, the number of other offences increased by 7% statewide from 156,893 offences recorded in 2010/11 to 167,622 offences recorded in 2011/12. This equates to a rate of 3,705 offences per 100,000 persons in 2011/12.

Six of the eight regions recorded increases in total other offences with South Eastern Region recording the largest increase of 14%. Rates are traditionally higher in the northern part of the State and this trend was again repeated in 2011/12 with Northern Region recording the highest rate in the State.

Drug Offences

Drug offences overall reported an 11% increase in the number of offences. All of the five sub categories of drug offences reported increases which resulted in the overall increase. When taking into account the growth of Queensland's population, drug offences recorded an increase of 10%.

Far Northern Region recorded the highest rate of drug offences in the State. The highest increase was recorded by South Eastern Region (25%). Metropolitan South Region recorded the lowest rate (791 offences per 100,000 persons).

Breach of Domestic Violence Protection Orders

Breach of domestic violence protection orders are a breach of a court order and, as such, are classed as "Regina" offences; hence, the inclusion under other offences and not offences against the person.

The 2011/12 financial year reported a 9% increase in the number of breach of domestic violence protection orders. A total of 11,101 offences were reported to police, equating to a rate of 245 offences per 100,000 persons.

Metropolitan Regions recorded the lowest rate of Breach of Domestic Violence Protection Order offences in the State, while the northern regions again recorded the highest. Northern Region recorded the largest increase (16%) and the highest rate of 609 offences per 100,000 persons.

Weapons Act Offences

The number of weapons act offences increased by 11% from 3,412 offences reported in 2010/11 to 3,778 offences reported in 2011/12. The overall

increase is attributable to increases in all five weapons sub categories. Increases were recorded in unlawful possession firearm concealable firearm (26%), unlawful possession firearm – other (9%), bomb possession and/or use of offences (31%), possession and/or use other weapons offences (11%), and weapons act offences – other (1%).

Six of the eight regions recorded increases in weapons act offences during the 2011/12 financial year. Northern and Central Regions recorded the only decreases of 16% and 1% respectively. During 2011/12, Far Northern Region recorded the highest rate of 123 offences per 100,000 persons while Metropolitan South Region recorded the lowest rate of 60 offences per 100,000 persons.

Good Order Offences

Good order offences increased by 8% from 2010/11 to 2011/12. A total of 51,674 offences were detected by police which equates to a rate of 1,142 offences for every 100,000 persons.

Northern Region recorded the highest rate of good order offences in the State. The lowest rate was recorded in Metropolitan South Region, with North Coast and Metropolitan North Regions reporting the only decreases.

Traffic and Related Offences

Traffic and related offences increased by 3% from 38,318 to 39,494 offences. Two of the four sub-categories recorded increases of which the largest was a 31% increase in disqualified driving. Drink driving is the largest in volume of the sub-categories and, as such, exerts the greatest influence on the traffic and related offences total. The rates for this sub-category recorded a 7% decrease per 100,000 persons.

Metropolitan North Region recorded the largest decrease as well as the lowest rate of traffic and related offences. Metropolitan South Region and Southern Region both recorded the largest increase of 8% in the period under review. Far Northern Region recorded the highest rate of 1,338 offences per 100,000 persons.

Please note that the traffic and related offences category referred to above includes dangerous operation of a vehicle, drink driving, disqualified driving and Interfere with the mechanism of a motor vehicle only. For information on Speed and Red Light Camera Notices or Random Breath Tests please refer to the traffic section on pages 141-147.

Monthly Crime Trends

The graphs in this section provide monthly data for selected offence categories from July, 2002 (2002/03 financial year) to June, 2012 (2011/12 financial year), expressed as a rate, thereby factoring in the size of the Queensland population for each year. All crime statistics appearing in these graphs are comparable over the ten year period except where indicated with a break in continuity.

Australian Demographic Statistics, December Quarter 2011 (3101.0), Australian Bureau of Statistics were used to calculate the rates up to June, 2012.

To test for a statistically significant trend in the following graphs, Kendall's rank order correlation test (Conover, W.J. 1971 *Practical*

Non-Parametric Statistics, 2nd edition, John Wiley and Sons, pages 256-260) was used. Although the 5% level of significance was used, most results were significant at the 1% level. Details are footnoted where appropriate in the text under each graph. This test is a two-tailed test which determines whether there is an increasing or decreasing trend in the recorded number of offences over the one hundred and twenty month period covered in the report.

Some month to month variations in the numbers of recorded offences suggested seasonal factors may be operating. The test for trend is not sensitive to seasonal variations; it is sensitive only to a generally increasing or decreasing trend over the time period examined.

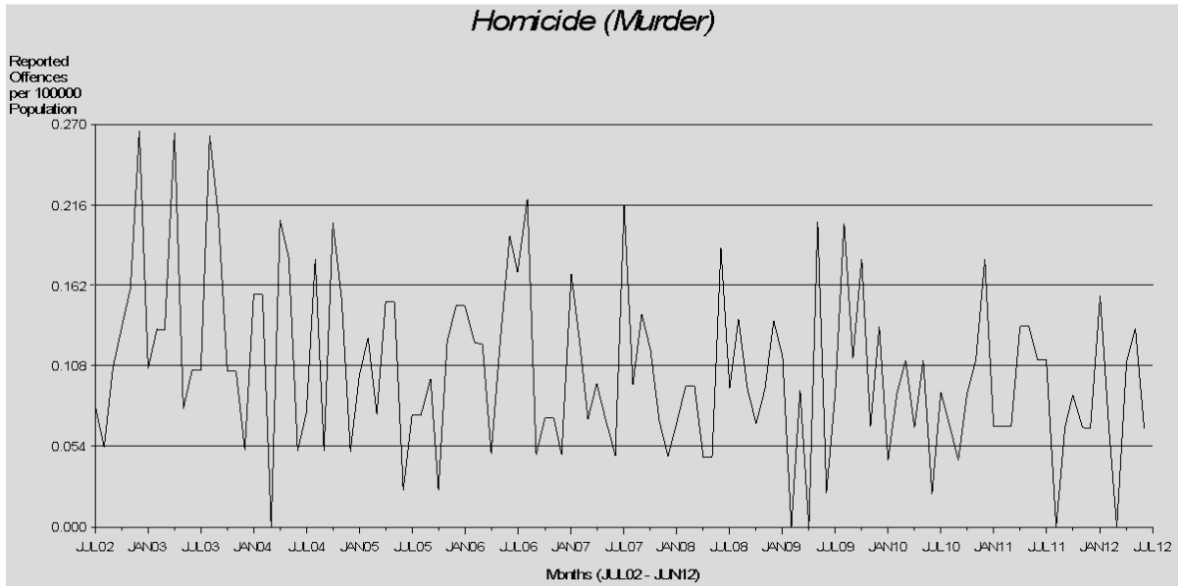

Total offences against the person has a statistically significant* decreasing trend over the ten year period. This broad offence group tends to be dominated by assaults as is evidenced by the strong seasonal influence recorded by

the time series. During the last financial year, offences against the person peaked in November due to the higher number of sexual offences and other offences against the person reported in the month.

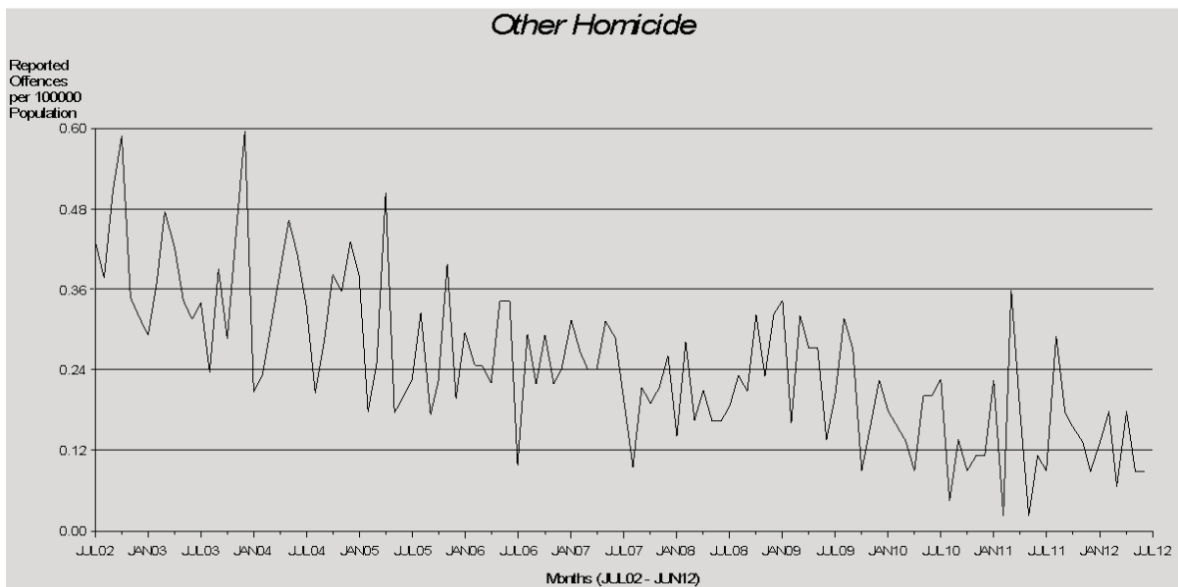

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Over the ten year period there is a significantly decreasing trend* in the homicide (murder) time series. This small volume offence is subject to marked fluctuations from one month to the next.

There were 42 reported murders in 2011/12 for Queensland which is ten more than the previous year.

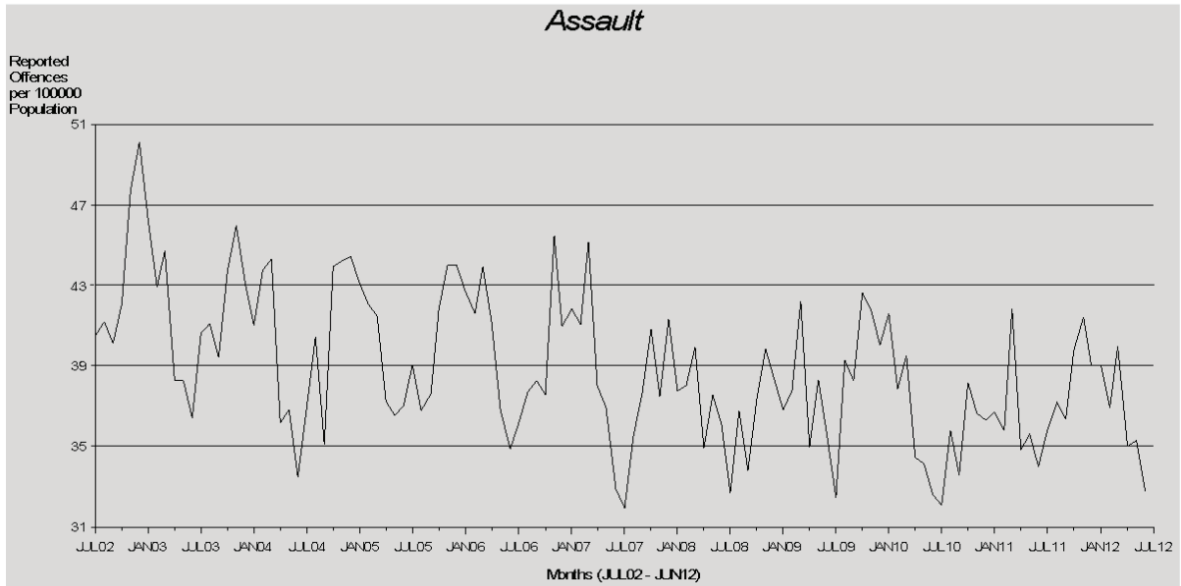

As with homicide (murder), other homicide is a low volume offence category and, as such, is subject to random fluctuations from month to month.

Over the ten year period, there is a significantly decreasing trend* for the other homicide time series. Other homicide reported a rate decrease of 12% in the 2011/12 financial year.

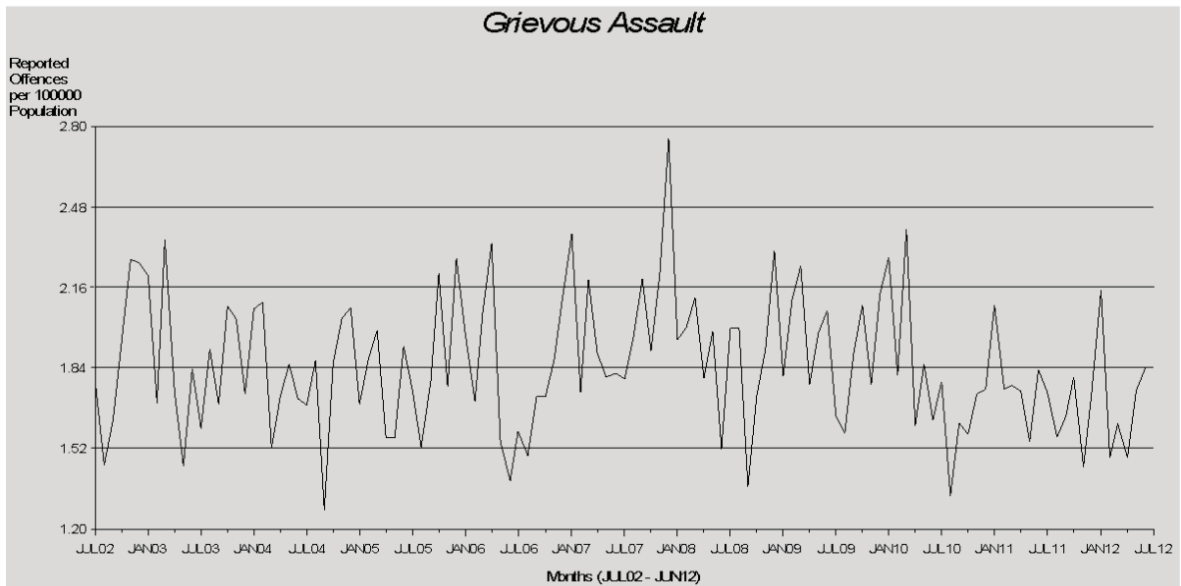

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Assault is the largest in volume of the offences against the person categories. There was a statistically significant decreasing trend* detected for the 2011/12 period. Assault offences are subject to strong seasonal

influences, which are evident in the time series, with a higher rate of offences occurring over the summer months and a lower number of offences occurring in the winter.

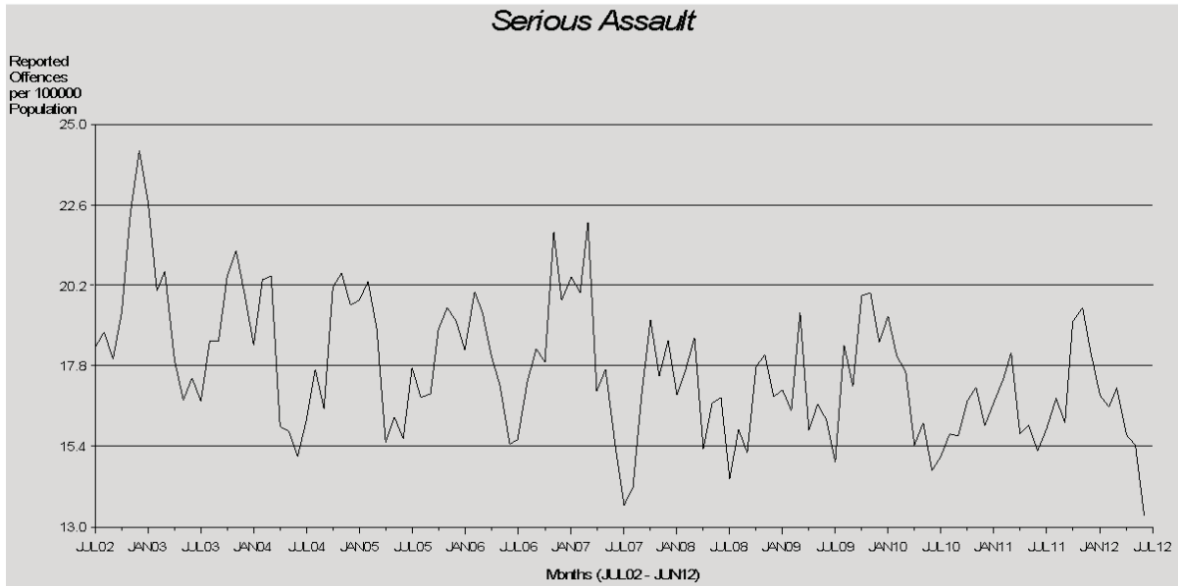

Grievous assault is a small volume offence and, as such, will be subject to marked fluctuations over time. Overall, the rate of grievous assaults has no statistically significant increasing or decreasing

trend* over the ten year period. The seasonal influence is obvious in the time series with the peaks occurring in the summer months.

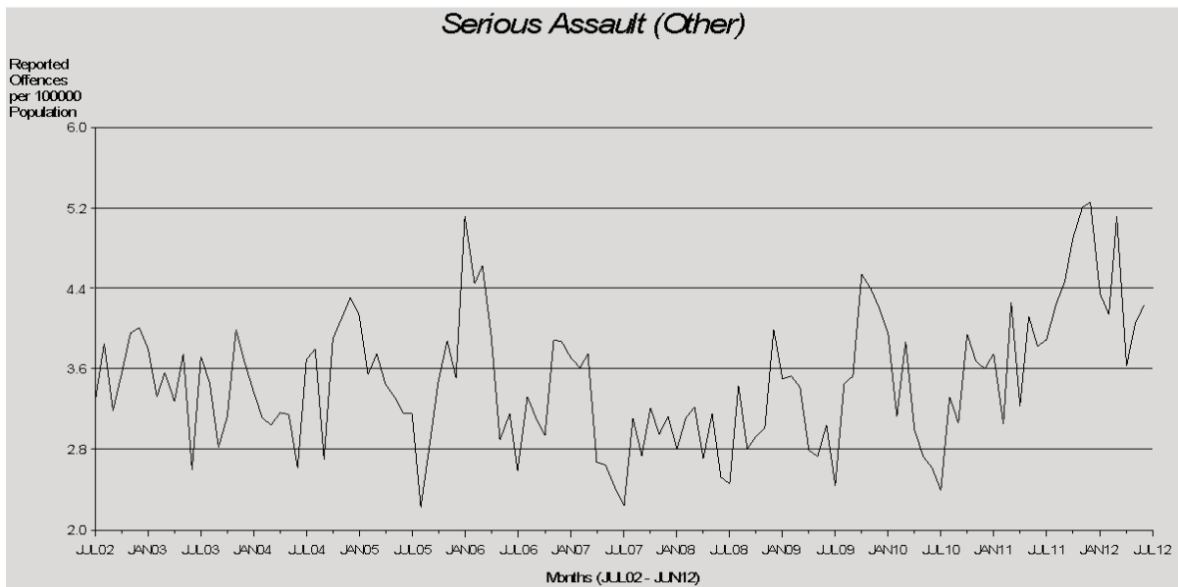

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Serious assault offences again show strong seasonal influences in this time series, with a higher rate of offences occurring over the summer months and a lower rate of offences occurring in

the winter months of each year. A significantly decreasing trend was detected over the ten year period*.

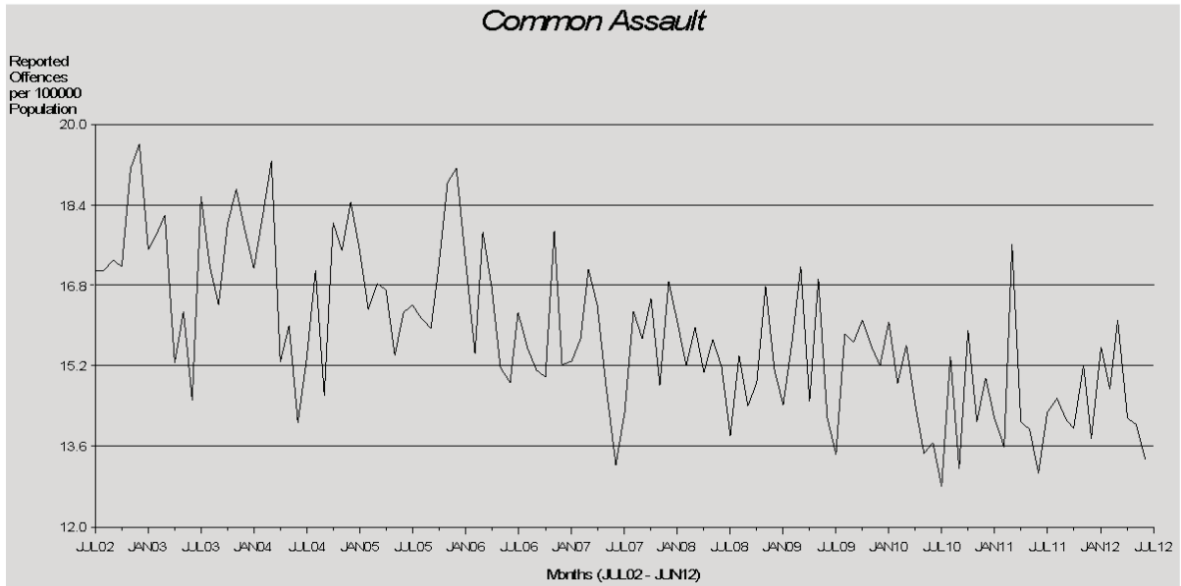

Serious assault (other) has no significantly increasing or decreasing trend* over the ten year period. Although less apparent than for the other sub-categories of assault, the peaks and troughs

reflect the strong seasonal influence exerted on the time series with the higher rates occurring in the summer months.

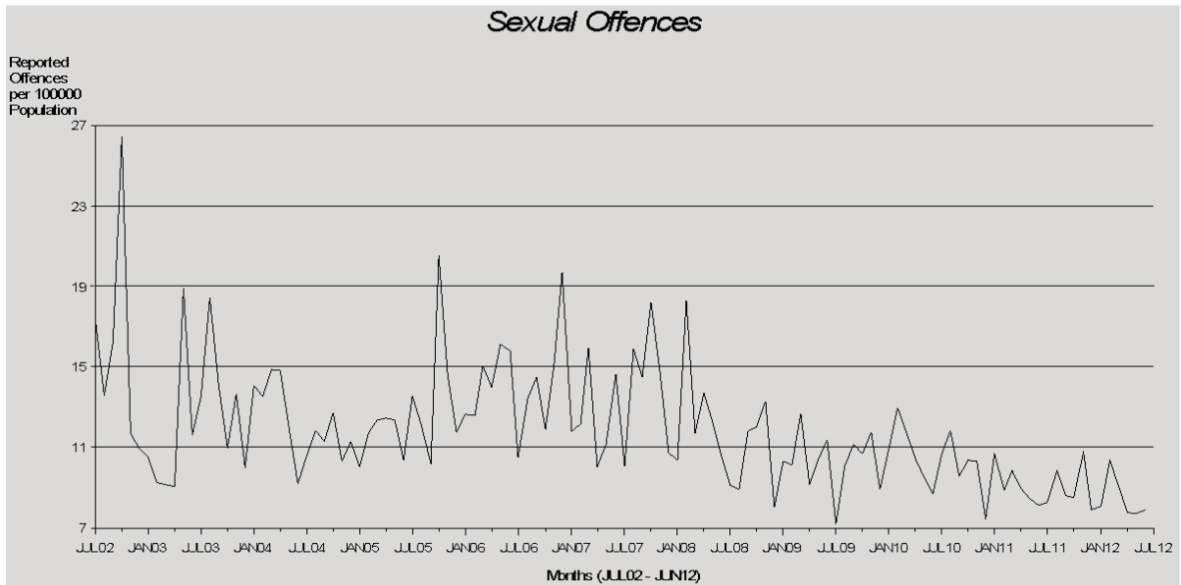

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

There is a statistically significant decreasing trend* shown in the time series for common

assault. As with all sub-categories of assault, the seasonal influence is apparent in the graph above.

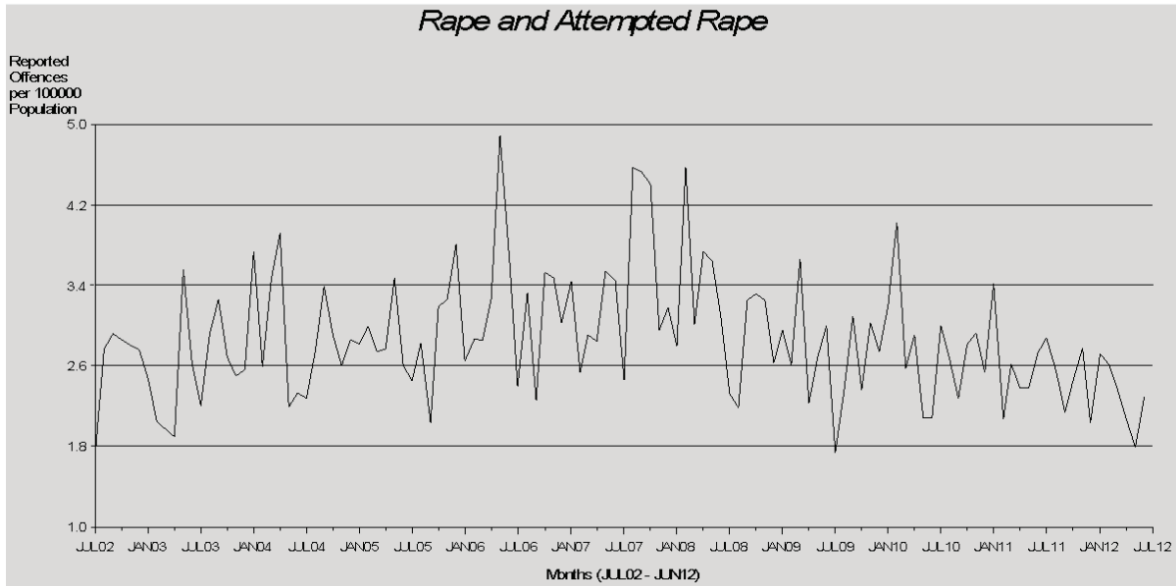

The spikes in the sexual offences time series are the result of a large number of charges preferred against two offenders in October 2002. Spikes can also be seen in October 2005, December 2006, August 2007 and February 2008 again the result

of a large number of offences being reported for incidents that occurred over a period of time and by a small number of offenders. Overall, this time series records a statistically significant decreasing trend*.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Spikes in this series can be seen in May 2006, August 2007, February 2007, January 2008 and January 2010 as the result of a large number of offences being reported as occurring over an

extended period of time by a small number of offenders. There is no statistically significant increasing or decreasing trend* over the ten year period.

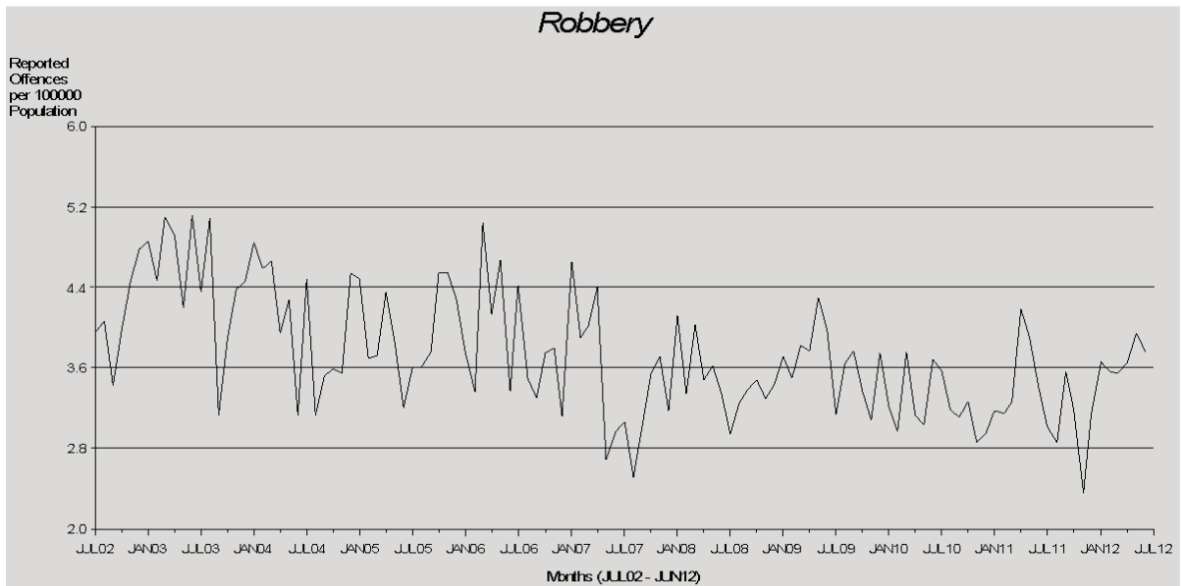

Two offenders were charged with in excess of 400 other sexual offences for incidents which charges were preferred in October 2002 respectively resulting in the first large spike in the time series.

Multiple reports relating to historical offences with large counts were responsible for the spikes in October 2005 and December 2006.

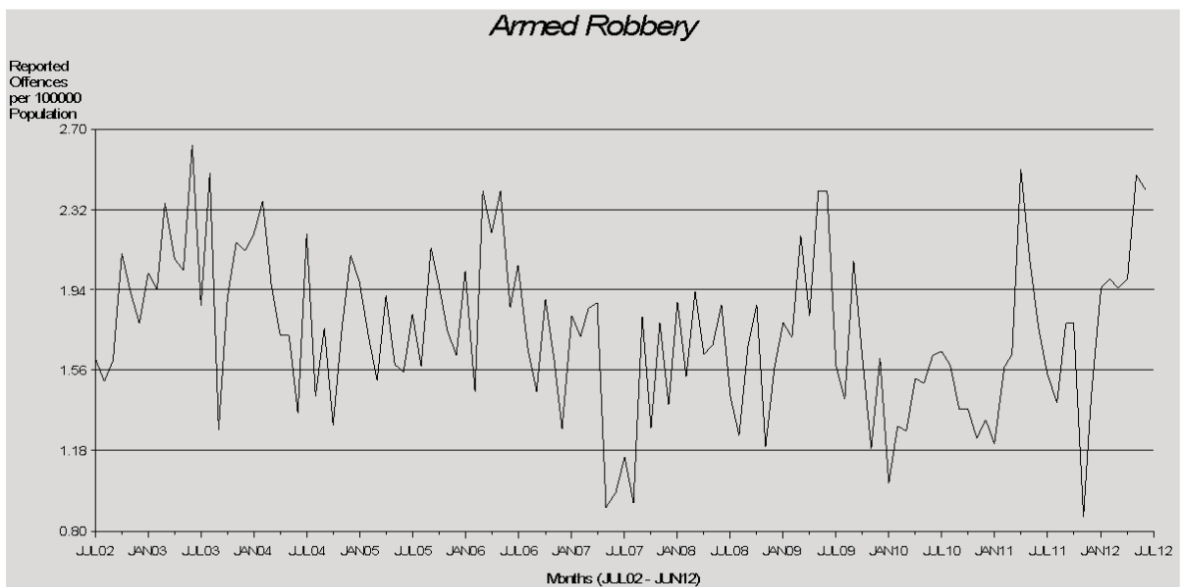

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

A spike in the series can be seen between March and May 2011 due to an increase in both armed and unarmed robbery offences. Overall

rates of robbery offences continued to record a significantly* downward trend.

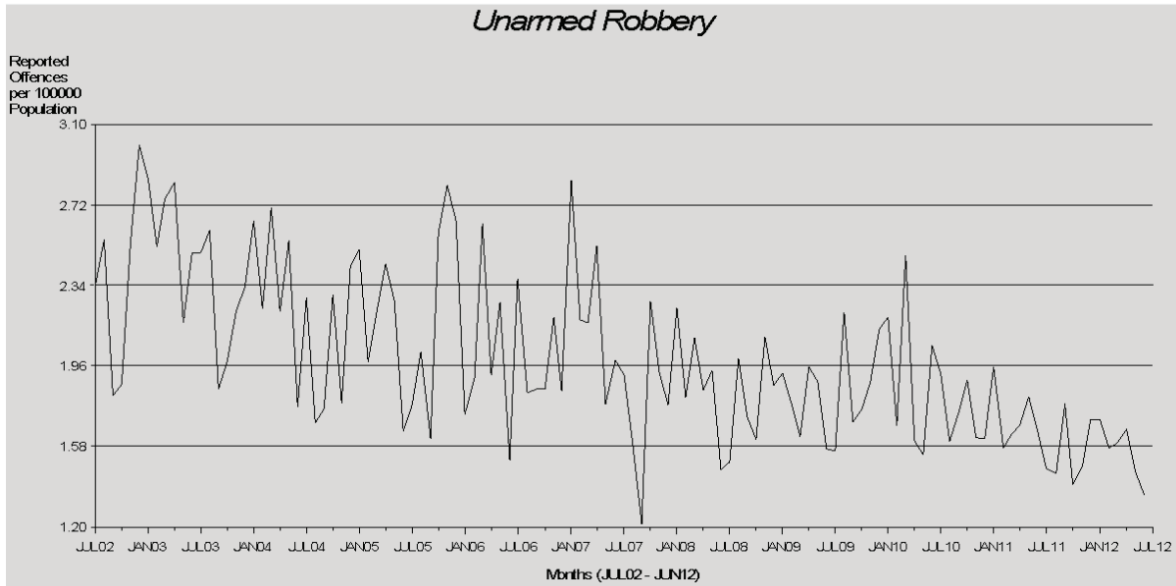

Although the overall trend in the rate of armed robbery has been decreasing significantly* since 2002/03, the time series recorded an increase in

2008/09 (14%), 2010/11 (8%) and again in the current period of 12%.

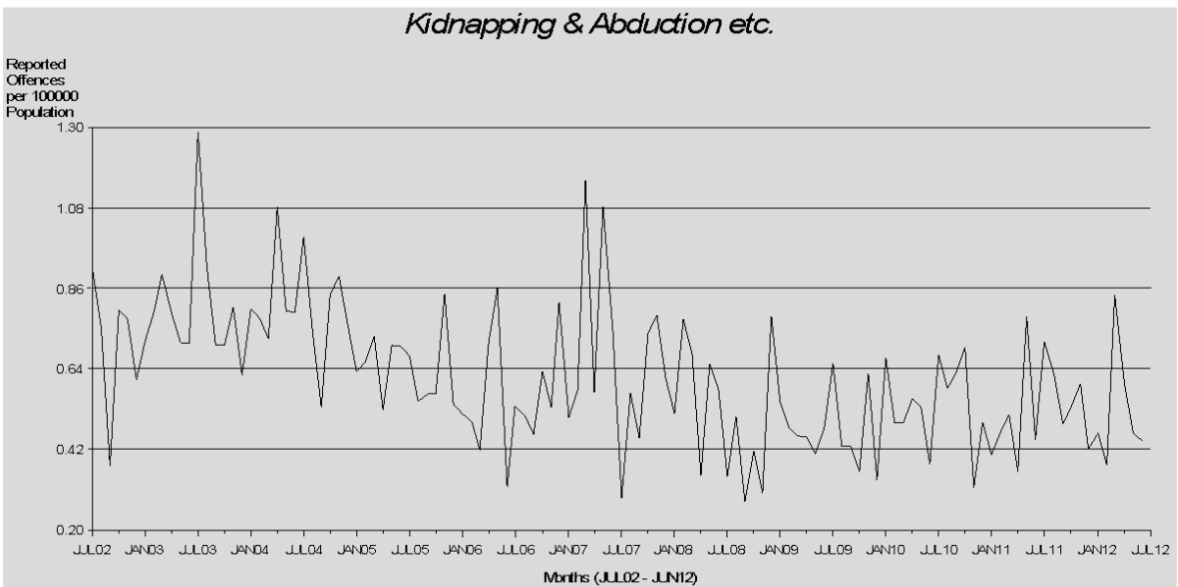

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Rates of unarmed robbery have recorded fluctuations over time however, have continued to record an overall downward trend*. During

the current period, unarmed robbery recorded a decrease of 9%.

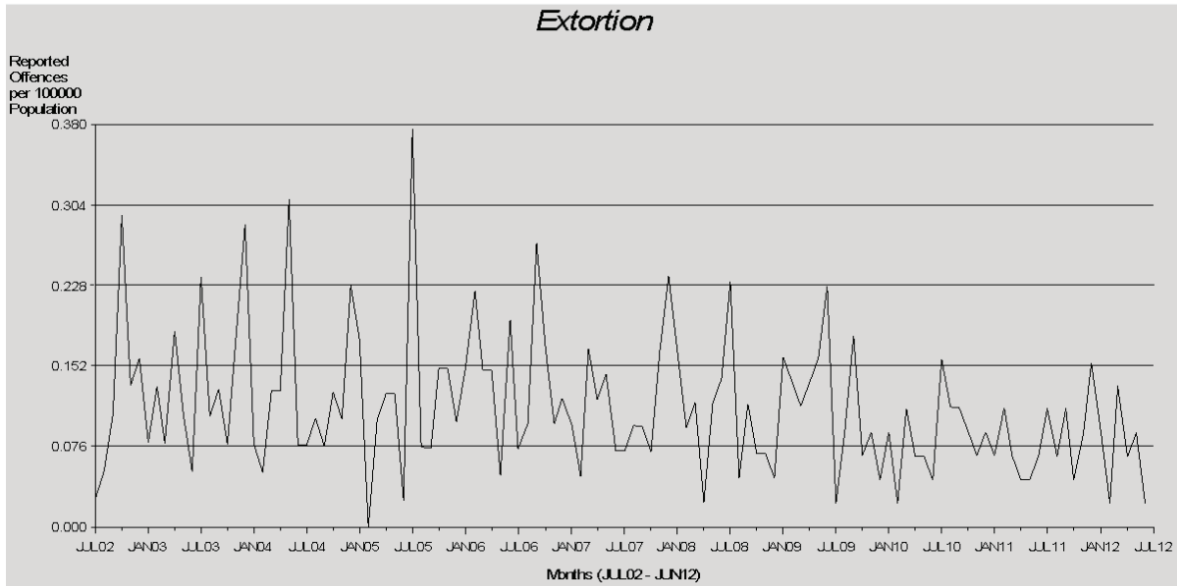

This time series is subject to the fluctuations that occur in small volume offence categories. The rates of kidnapping and abduction etc. offences

have been steadily decreasing over the ten year period of the time series and records a statistically significant decreasing trend*.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Extortion is the lowest in volume of the offences against the person categories and, as such, is prone to random variations from month to month.

Overall, a statistically significant decreasing* trend was detected over the ten year period.

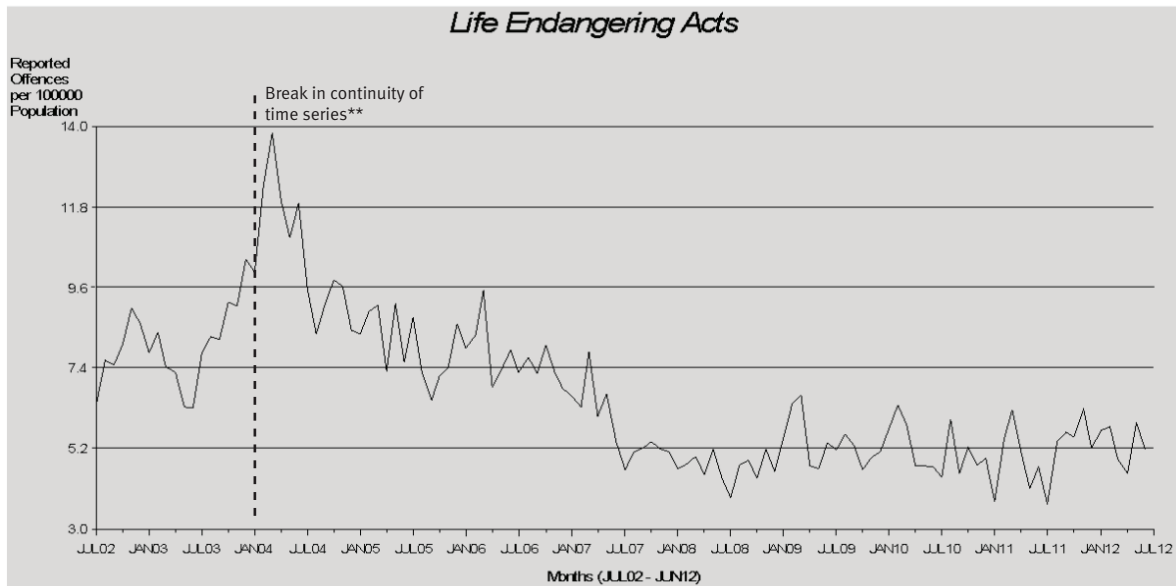

As can be seen in the graph above, the time series displays a statistically significant decreasing trend* over the ten year period. The State recorded

a 9% decrease in stalking offences during the 2011/12 financial year.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Due to a review conducted in January 2004 by the Crime and Misconduct Commission, the recording of child abuse cases has undergone changes. The rate of life endangering acts offences have been

steadily decreasing since April 2004 and records a statistically significant decreasing trend* over the ten year period.

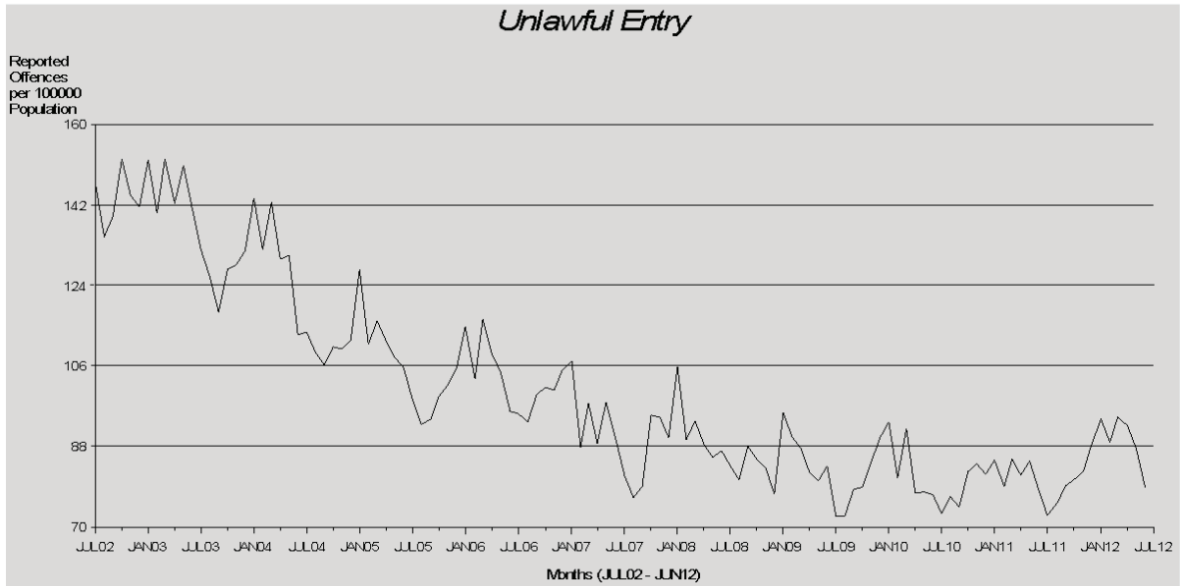

The offences against property time series has historically been reasonably stable, though since July 2002, has a statistically significant downward trend* being detected. This is a large

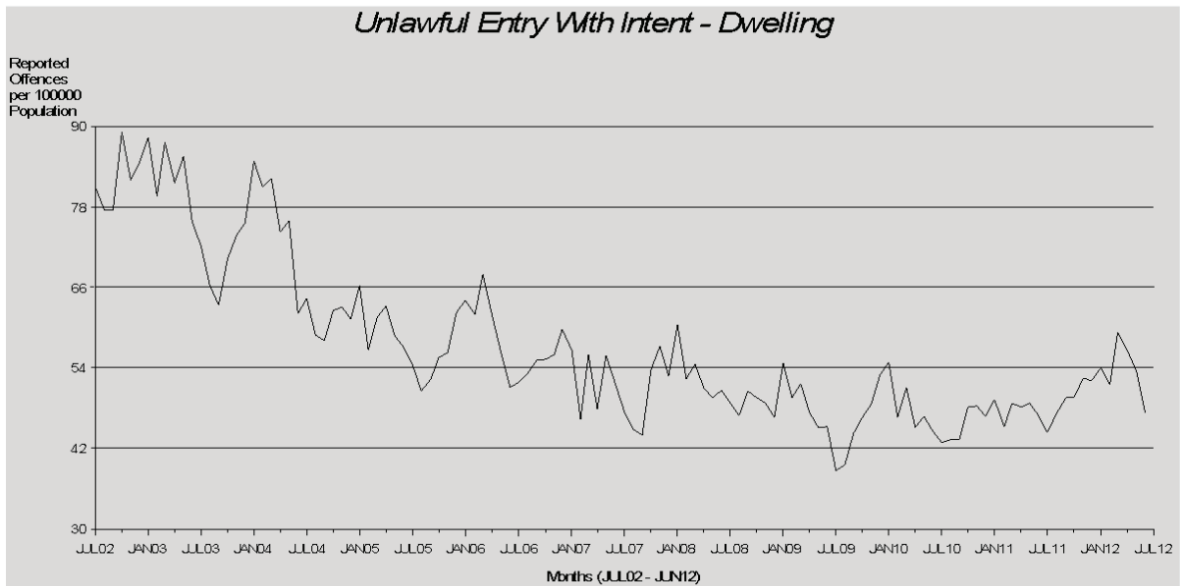

volume offence group and, as such, increases or decreases are usually small in the overall context. The rate of offences against property during the current time period increased by 6%.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

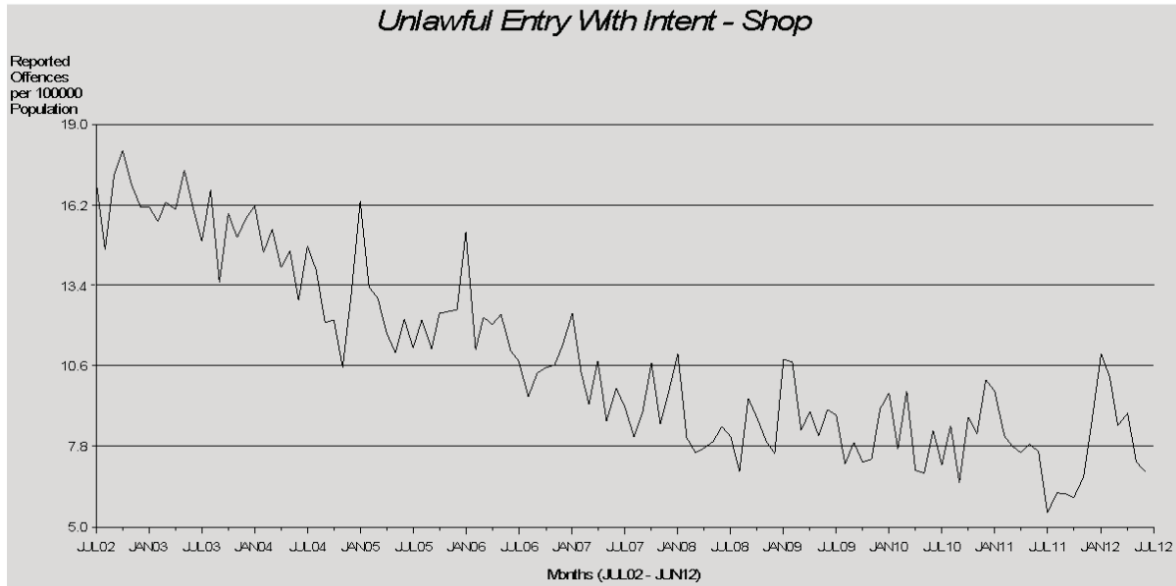

Overall, there was a statistically significant decreasing trend detected* for unlawful entry with intent offences. In the current period, the rate of unlawful entry offences increased by 5%.

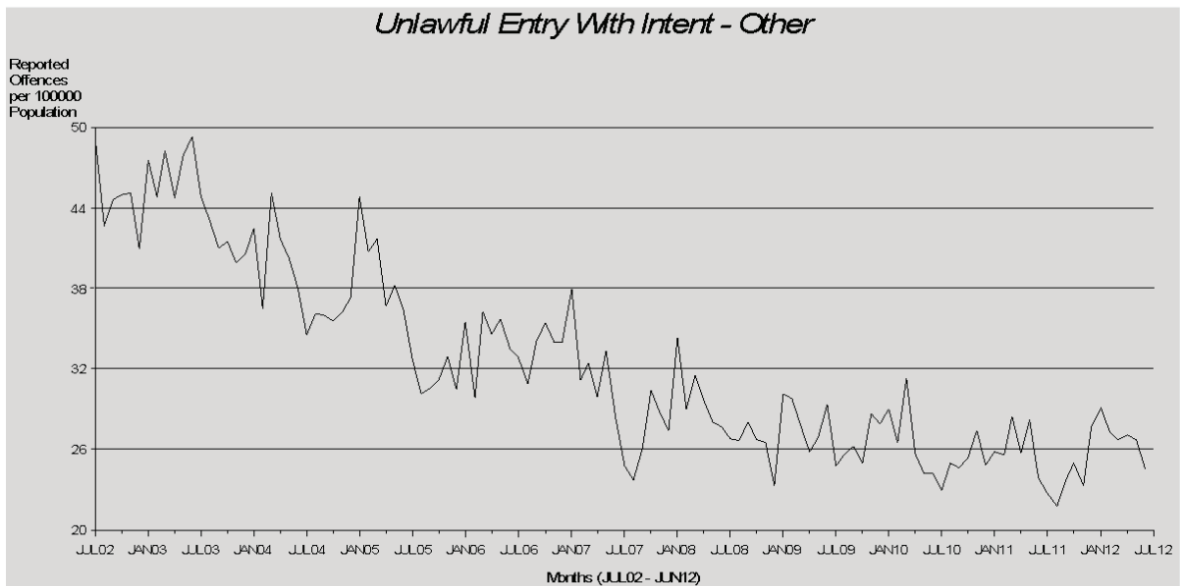

The rate of unlawful entry with intent – dwelling offences has been steadily decreasing from 2002 resulting in an overall statistically significant decreasing trend*. The rate of unlawful entry with intent – dwelling offences during the current time period recorded a 10% increase.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

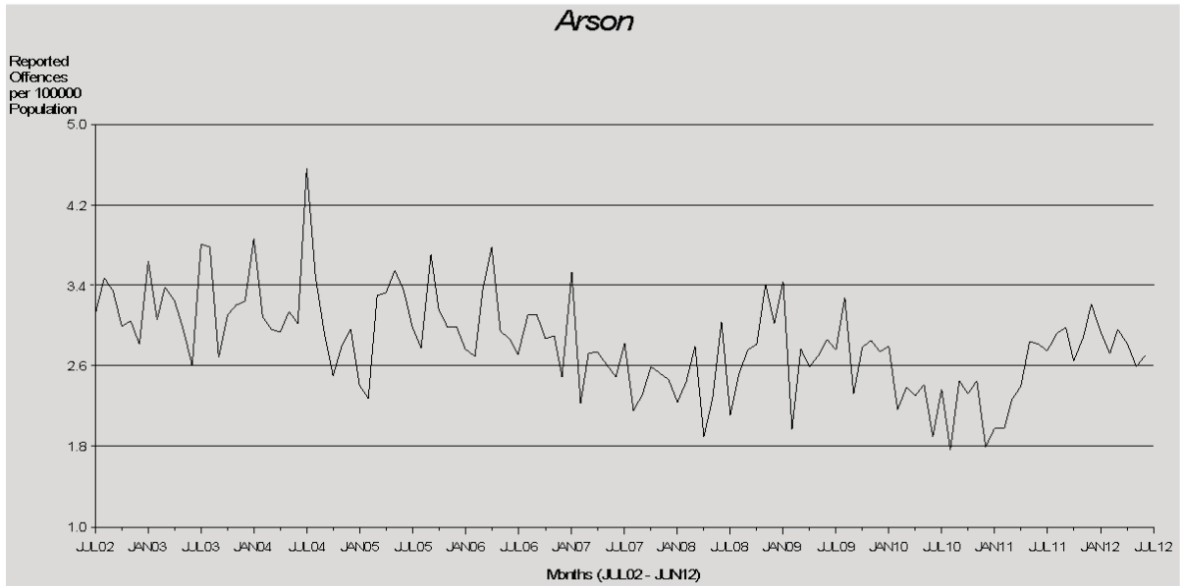

Over the ten years, the rate of unlawful entry - shop offences has been significantly decreasing*. These offences recorded a 6% decrease for 2011/12 financial year.

Overall, there was a significantly decreasing trend* apparent at the end of the time series with the current year under review continuing the trend with 1% decrease. The reductions over the last ten financial years are

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

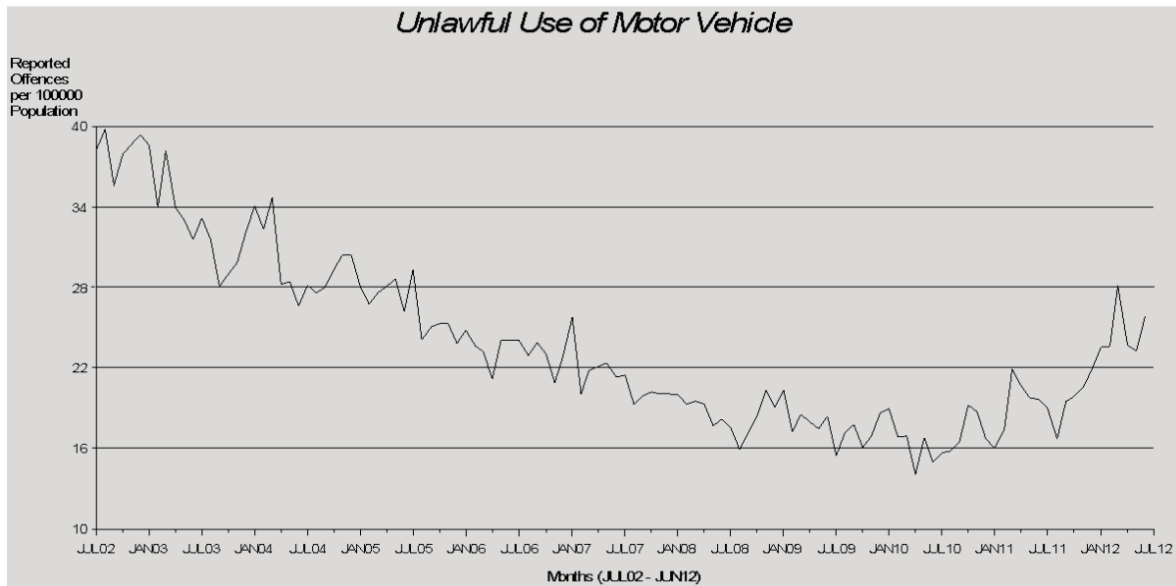

Over the ten years of the time series, a statistically significant downward trend* was detected for arson offences. For the year under review, the rate of arson offences increased by 24%, this follows a decrease of 12% in 2010/11.

Over the ten year period of this series other property damage offences recorded a statistically significant downward trend*. For the current period under review a less than 1% increase was recorded.

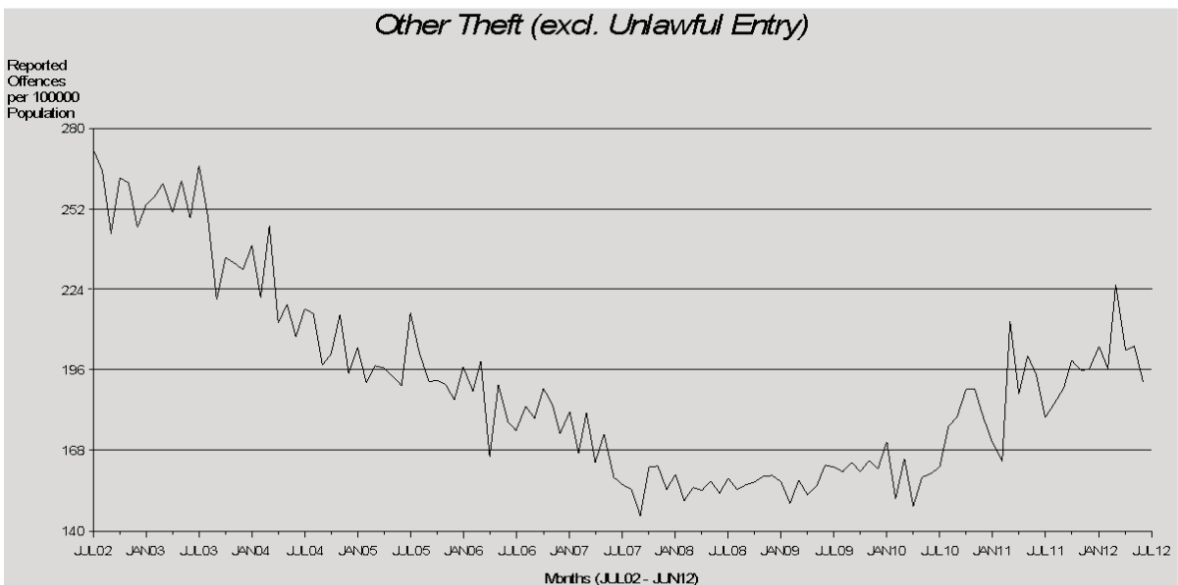

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Overall, a statistically significant decreasing trend* was detected for the unlawful use of motor vehicle time series. Since July 2002 substantive decreases can be seen in the above graph until

2009/10. During the past two years unlawful use of motor vehicle offences have recorded an increase of 7% and 22% respectively.#

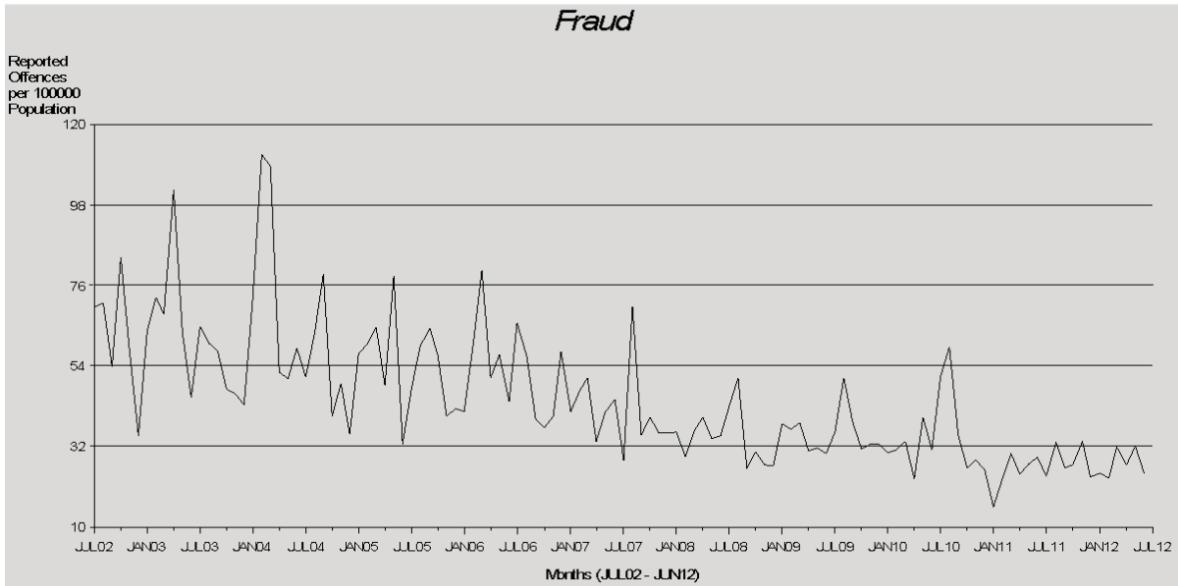

A statistically decreasing trend* was detected for the other theft (excluding unlawful entry) category. A decrease in offences can be seen from July 2003 to July 2010 and then an increase in these

offences can be seen. The current period recorded a 9% increase following a 13% increase recorded during the previous period.

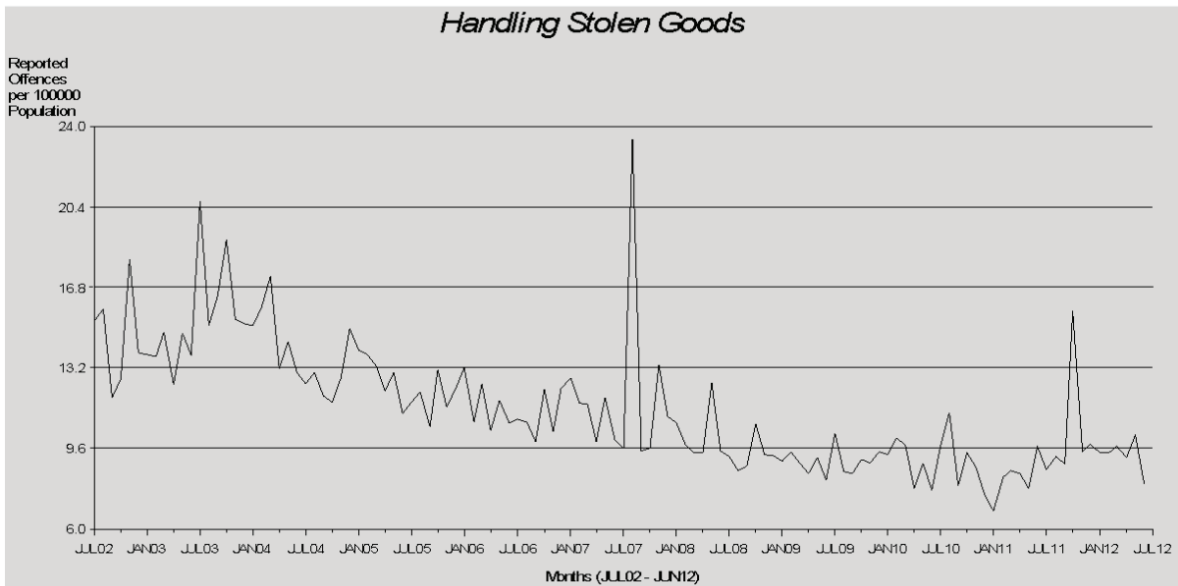

Includes attempted offences.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

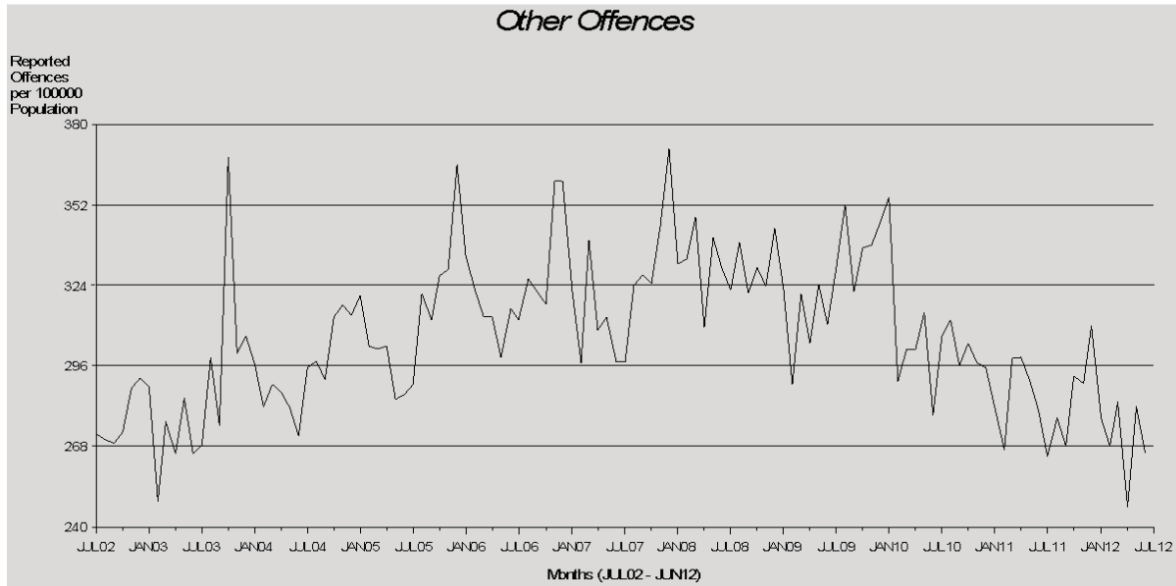

There is a statistically significant downward trend* in fraud offences as evident in the graph above. Three of the five sub-categories of fraud recorded decreases resulting in an overall decrease of 11% during the current reporting period.

A statistically significant decreasing trend* is evident in the handling stolen goods time series. Over the last 12 months however, the rate of offences increased by 12% after having decreased by 5% during 2010/11. The spike in 2007/08 period was the result of 470 offences preferred against two offenders during August 2007.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

Other offences are generally detected by police rather than reported to police. As such, any rise in other offences is usually regarded as a positive result. As is evidenced in the graph above,

a statistically significant upward trend* was detected with an increase of 6% being recorded by the State in the period under review.

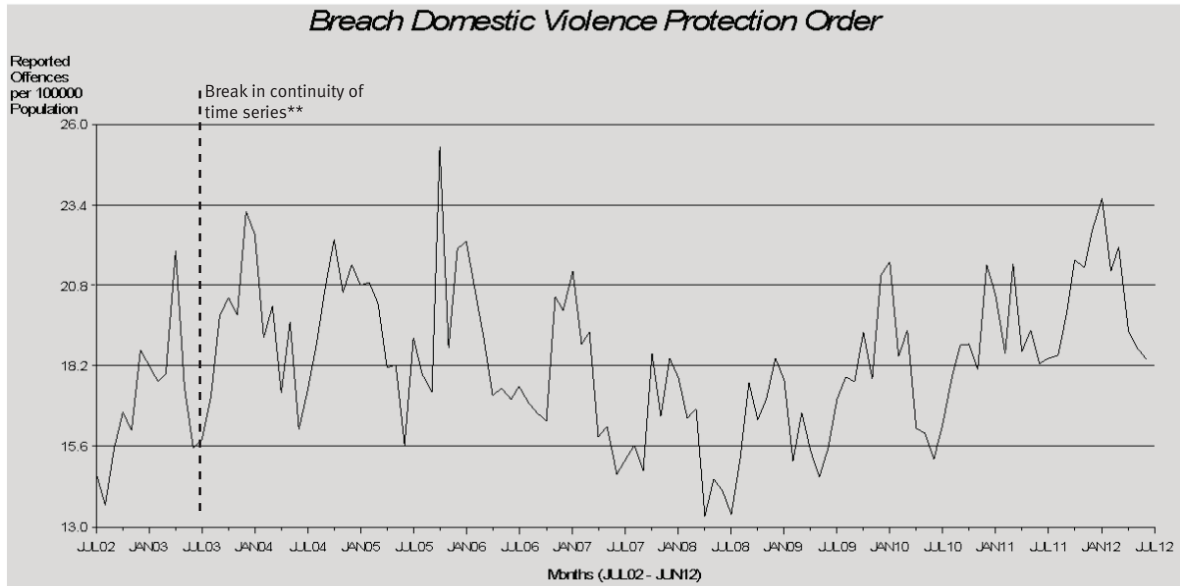

A statistically significant decreasing trend* was detected for this time series over the ten year period. The spike in the 2003/04 period was the

result of over 2100 offences laid against a single offender in October 2003. The State recorded a increase of 10% in the current period.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

The legislative change in March 2003** caused a break in the continuity of this time series. Since this amendment, the time-series has stabilised. The spike recorded in October 2005 was the result of nearly 226 offences committed by one offender and reported to police in this month. Breach of

domestic violence protection orders are subject to strong seasonal influences, as is evidenced in the graph above. No statistically significant increasing or decreasing trend* was detected over the ten year period.

A statistically significant decreasing trend* is evident in the weapons acts offences time series. Since January 2003, the time series has been

decreasing however, in the current period under review a 9% increase was recorded.

** The *Domestic and Family Violence Protection Act 1989* was expanded in March 2003 to include intimate personal, familial and informal care relationships.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Monthly Crime Trends

While the time series for good order offences records a statistically significant upward trend*, a strong seasonal influence can also be seen. Offences tend to peak in the summer months and

fall to a low during the winter months of each year. Good order offences have recorded an increase of 6% in the current period.

Overall, a statistically significant decreasing trend* was detected in the time series for traffic and related offences. The current period under

review however, recorded a 2% increase in these offences.

* The result is significant at the 1% level of confidence, using Kendall's rank order correlation test. See page 17 for further information.

Annual Crime Trends

In this section, an examination of the number of selected offences per 100,000 persons is provided for a thirty year period. The rates provided in this section are based on Estimated Residential Populations, or projections thereof, at 30 June each year, provided by the Australian Bureau of Statistics and the Office of Economic and Statistical Research, Queensland.

Since 1982/83, many legislative changes have occurred, and the classification, recording and reporting systems used by the Queensland Police Service have evolved. Therefore, some offence categories, for which thirty years of comparable statistics are not available, have not been included.

The offence categories which have been included in this section are those that have a reasonable degree of consistency and comparability for the past thirty years. Some of these categories (such as unlawful entry and drink driving) have undergone considerable change at certain times. These breaks in continuity have been noted in the accompanying text where appropriate.

Prior to 1991/92, all crime statistics produced by the Queensland Police Service were based on the date the information related to the crime was received at the Information Bureau (and its precursors) in Police Headquarters. Since 1991/92, the reference date has been the date the offence is reported to police.

While this broad offence aggregate is comprised of a number of different offence categories, the offence category of assault tends to dominate offences against the person. As such, the offences against the person time series largely reflects the

assault time series. Offences against the person has seen an increase during the late 1980's and early 1990's. The rate stabilised from the mid to late 1990's and has shown a decreasing trend over the last six years.

* The offence category of other offences against the person is not included in offences against the person.

Annual Crime Trends

Homicide (murder) is a small volume offence and, as such, is subject to sizeable fluctuations from year to year. Overall, however, the homicide (murder) rate has changed little. Following a peak in 1996/97, the rate of homicide (murder)

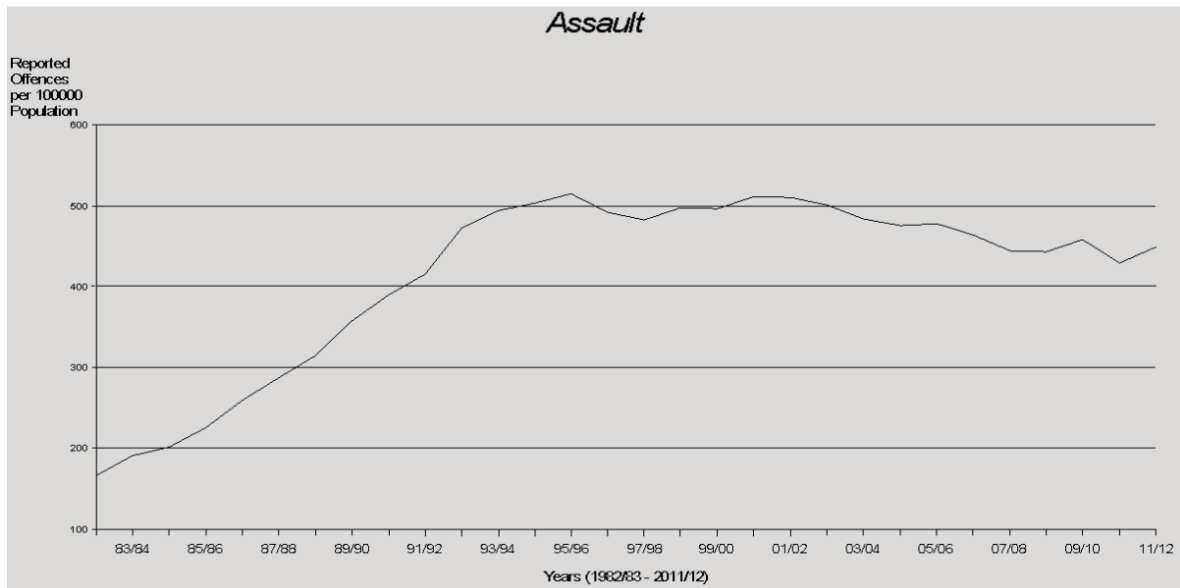

has been steadily decreasing until 2008/09. In 2009/10, the rate increased by 18%, followed by decreases in 2010/11 and again in the current period under review of 7% and 20% respectively.

Other homicide is also a small volume offence category and, as such, is subject to sizeable fluctuations from year to year. From 1987/88 to 1989/90, other homicide offences were reported at a slightly higher rate; however the rate has

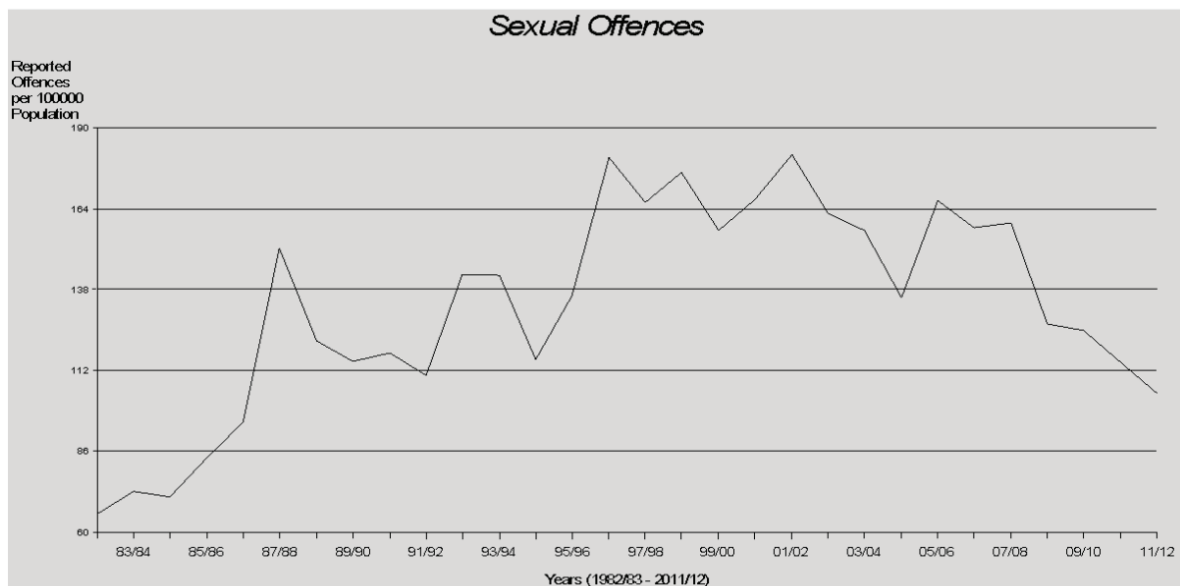

steadily decreased since 1989/90. In 2011/12 there was a 12% decrease in the rate of other homicides, largely as a result of decreases in attempted murder and driving causing death offences.

Annual Crime Trends

Looking at the overall trend, the rate of assaults steadily increased over the 1980's and even into the early 1990's. Since the mid 1990's, the rate

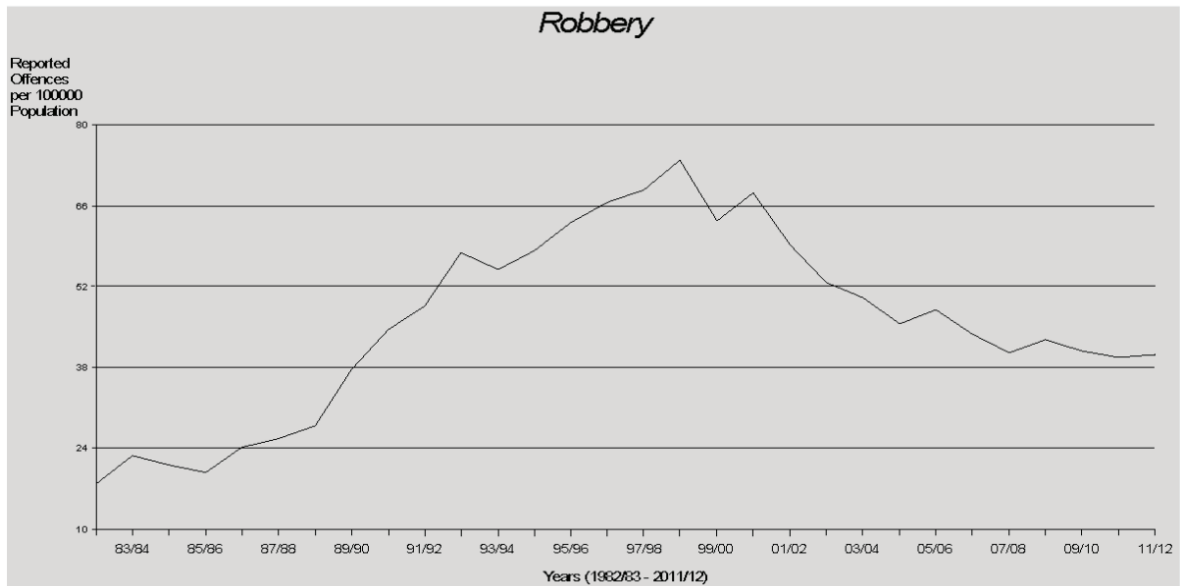

of assault stabilised. During 2011/12 the rate of assaults increased by 5% from that reported in the previous year.

Sexual offences may be reported to police many years after the offences actually occur and there are often numerous charges preferred against one offender. These factors have resulted in the

fluctuations seen in the graph above. Queensland recorded a decrease of 9% in the rate of sexual offences in the year under review compared with the previous year.

Annual Crime Trends

Robbery offences increased sharply between 1988/89 and 1998/99. Since then, the overall decreasing trend for robbery is apparent in the graph above. The rate of robbery offences for

the period under review has increased by 1% in 2010/11. This is attributed to an increase in the sub-category of armed robbery.

Offences against property increased steadily from 1982/83 to 1990/91, although a sharper increase in nearly all property offence sub-categories is reflected in the sharp increase seen from 1988/89 to 1990/91. From 1990/91 the rate increased slower than was seen previously. From 2000/01

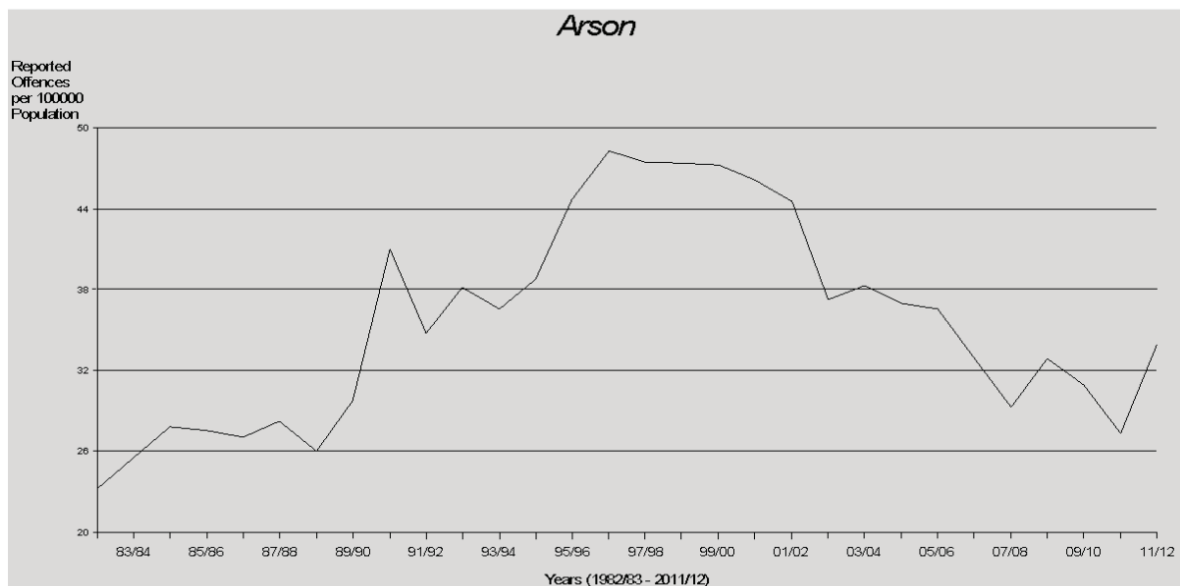

to 2009/10, total offences against property has shown a decreasing trend. In 2011/12 total property crime has increased by 6% as a result of increases in unlawful entry, arson, unlawful use of motor vehicle, other theft and handling stolen goods offences.

Annual Crime Trends

Following a steady increase in unlawful entry involving breaking offences from 1982/83 to 1988/89, offences increased suddenly and sharply from 1988/89 to 1990/91. Throughout the

1990's the rate has stabilised and has recorded a decreasing trend since 2000/01. The period under review has gone against this trend, reporting an increase of 10%.

Apart from the sharp increase in the late 1980's and the subsequent decrease in the early 1990's, arson offences have risen steadily up to 1996/97. Since then, the rate of arson offences has declined until 2008/09 where an increase can be

seen in the above graph. The decreasing trend then continued from 2008/09 until the current reporting period where an increase of 24% was reported.

Annual Crime Trends

This offence category rose steadily up to 2000/01. Since then, other property damage offences have decreased at a sharp rate. A change in recording practices for this offence contributed to a 20%

decrease in the rate for 2001/02. The rate of other property damage offences has reported no change over the current period under review.

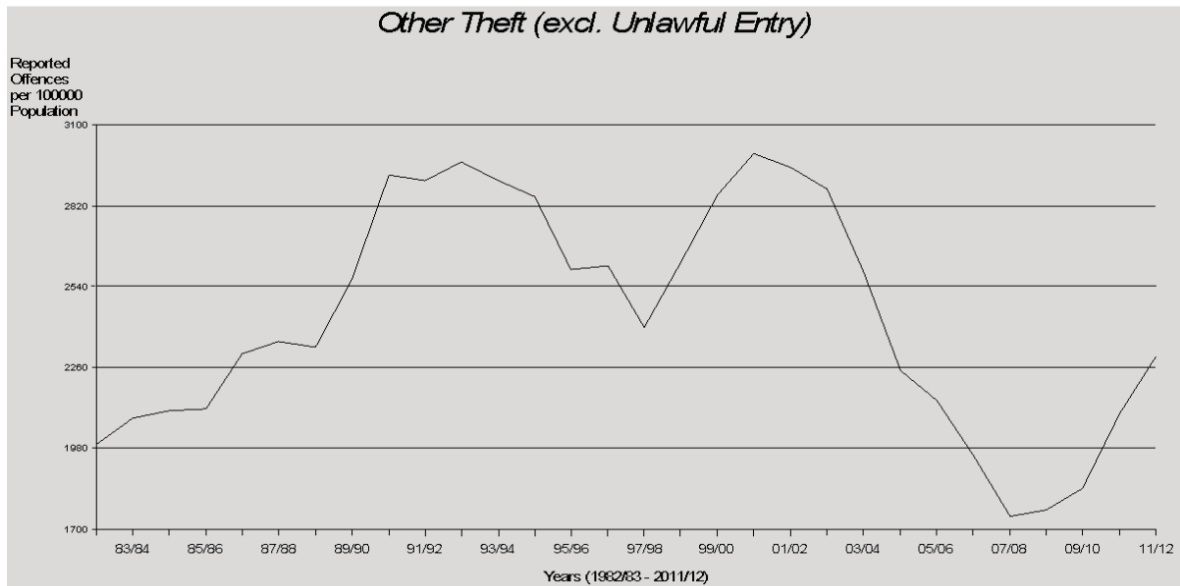

Unlawful use of motor vehicle offences* recorded a substantial decrease over the period 1995/96 to 1997/98. Rates then rose sharply to again equal the high rates seen in the mid 1990's. From

2000/01 to 2009/10 rates again declined. In the current period, the State recorded an increase of 22%, this follows an increase of 7% in 2010/11.

** The break in continuity is the result of a policy change implemented in December 2001 (see Explanatory Notes section).

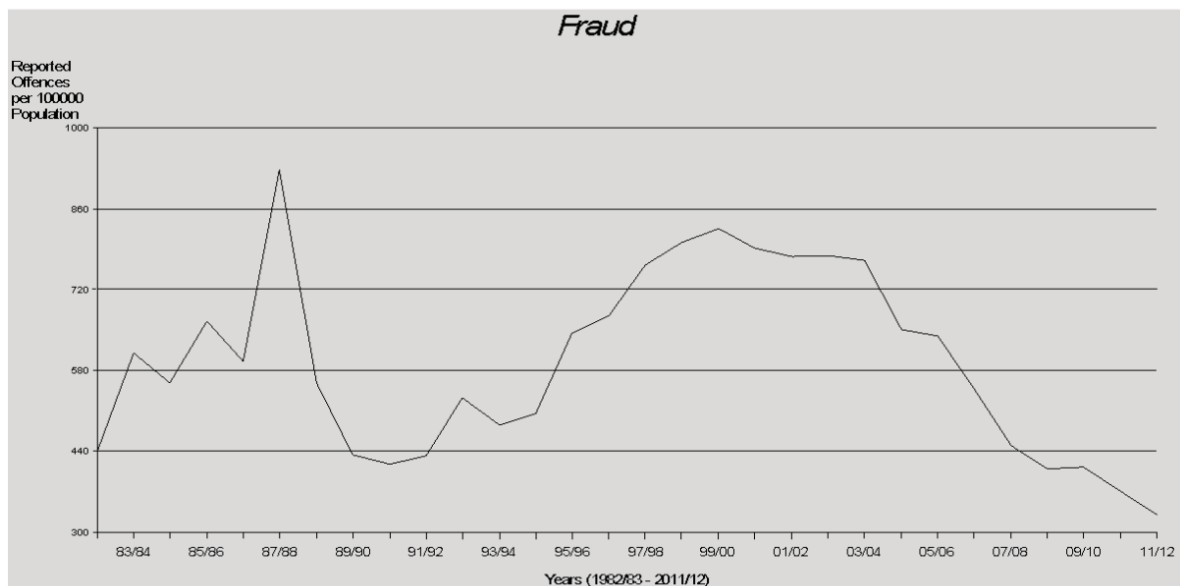

* The total for unlawful use of motor vehicle includes attempted offences

Annual Crime Trends

As with most offences against property sub-categories, the sharp increase recorded during the late 1980's is evident in the graph above and this sharp increase was repeated in the late 1990's. A decreasing trend in other theft (excl. unlawful

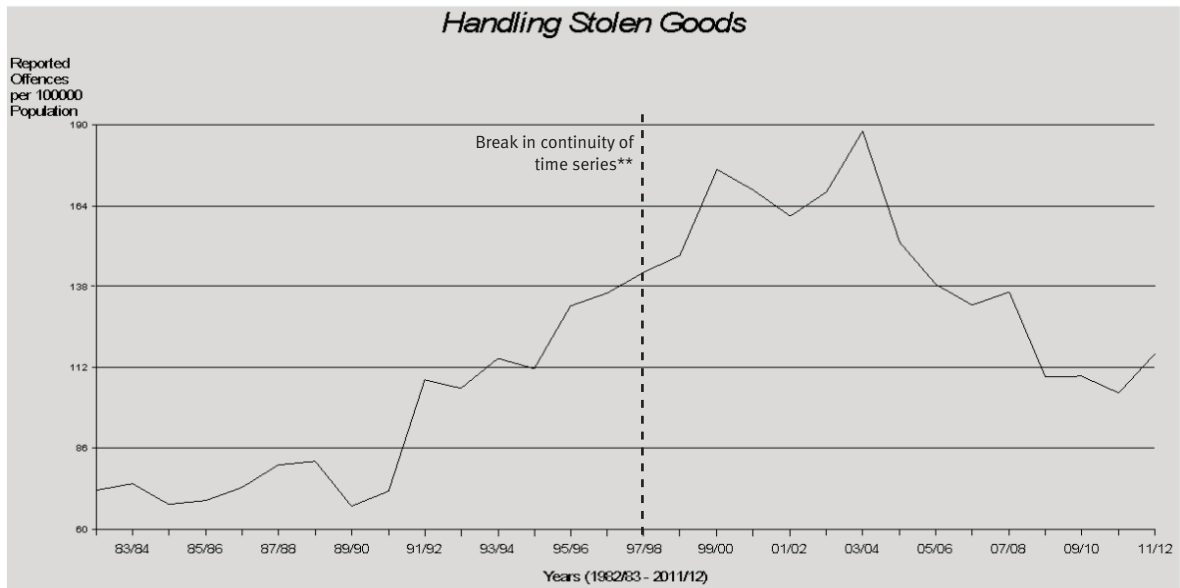

entry) offences was recorded from 2000/01 to 2007/08. However, the last four financial years showed a reverse in this trend by recording increases, with 2011/12 reporting an increase of 9%.

Fraud offences increased sharply from 1981/82 to 1987/88. The sudden decrease from 1987/88 to 1990/91 is due to a change in policy by banking institutions regarding the reporting of offences, rather than an actual reduction in offences. The figures reported for 2000/01 and 2001/02

effectively halted a steadily increasing trend evident over the last decade. Rates recorded in each year from 2002/03 to 2010/11 have continued this reversal with a 11% reduction reported for the year under review.

Annual Crime Trends

Handling stolen goods was expanded in 1997/98 to include the sub-categories possess, receive, etc. tainted property and other handling stolen goods. possess, receive, etc. tainted property is now the largest in volume of the offence sub-

categories resulting in the necessity for caution when making comparisons prior to and following this change. In the year under review, the rate of offences increased by 12%.

Apart from a period in the mid to late 1980s, possibly due to the reallocation of police resources resulting from the Fitzgerald Inquiry, drug offences steadily increased up to 1999/00. From 2007/08 a steady decrease can be seen

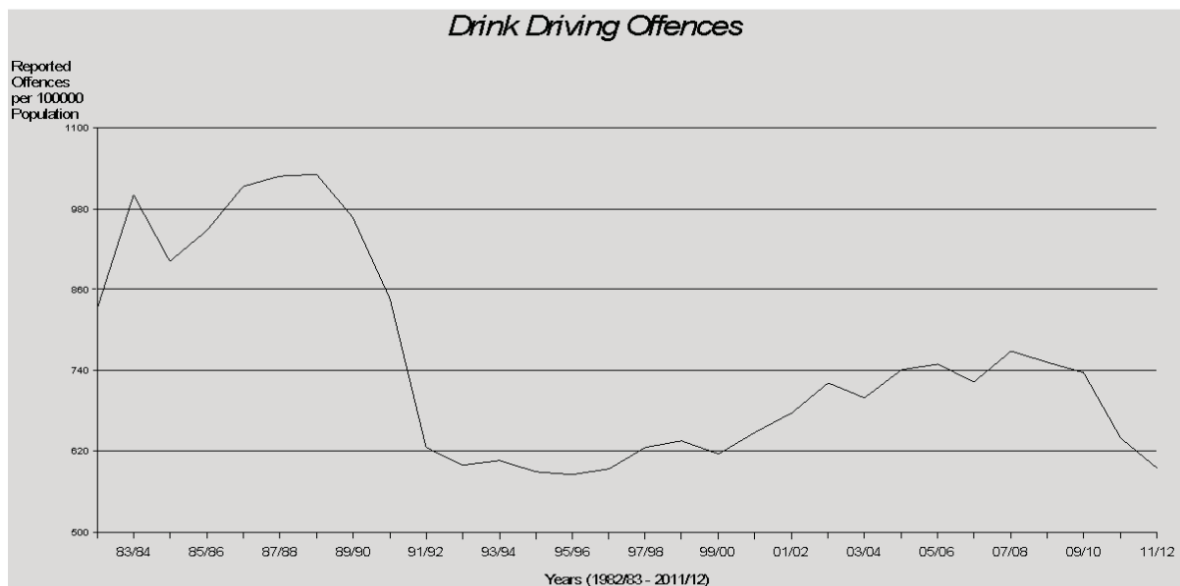

in the above graph until 2010/11. The current period under review has recorded an increase of 10% following an increase of 2% in the 2010/11 reporting period.

Annual Crime Trends

A dominant feature of the time series is the decrease in reported good order offences from 1988/89 to 1991/92 and the subsequent increase following that period. Since 1995/96,

good order offences have been steadily increasing until 2009/10 where these offences decreased in 2010/11. In the current period under review, the rate of good order offences increased by 6%.

Analysis of the drink driving offence time series is difficult due to the many changes that have affected the overall trend (see Explanatory Notes, page 150). The graph above highlights the effectiveness of these initiatives as offences

have reduced and remained stable at around 600 offences per 100,000 persons from 1991/92 to 2000/01. In the current period drink driving offences recorded a 7% decrease.

Regional Comparisons

The graphs in this section display changes in the rate of selected offences per 100,000 population from the 2010/11 to the 2011/12 financial years for Queensland Police Service regions.

The benefits of these graphs are twofold - the crime level of a region can be compared both with its own level in the previous financial year, and, secondly, with the crime levels of other regions. It should, however, be noted that each region faces unique policing issues. These graphs should

not, therefore, be used as a comparative measure of regional performance, but rather as a guide to crime trends and patterns across the State.

As with the rest of this Review, the offences per 100,000 persons calculations were performed using the Estimated Residential Population for 30 June each year, or a projection thereof, provided by the Australian Bureau of Statistics and the Office of Economic and Statistical Research, Queensland.

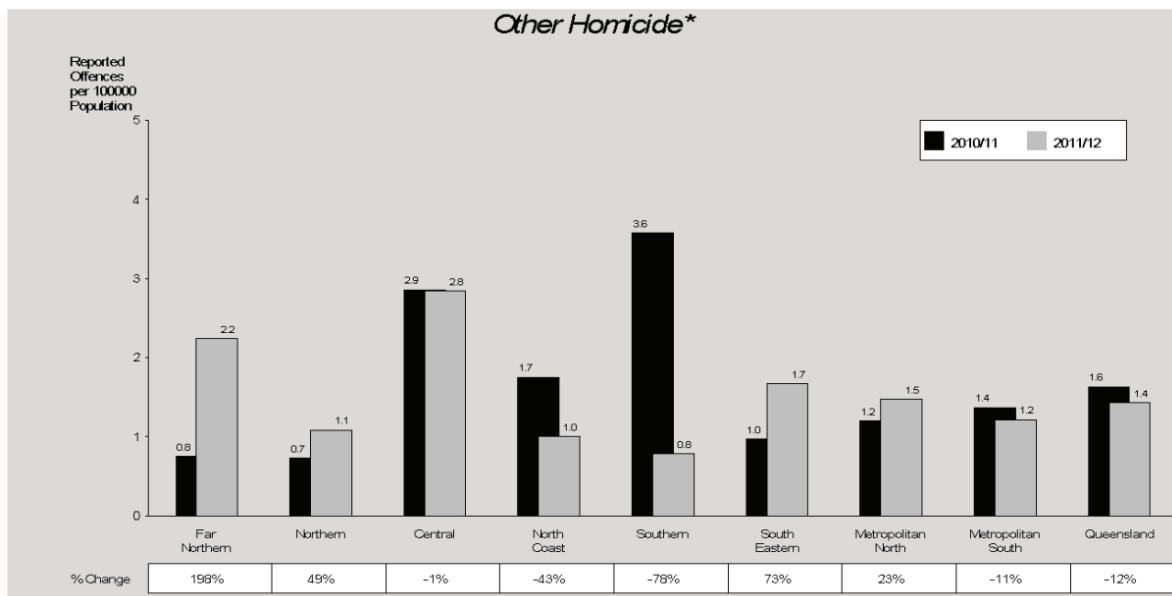

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Homicide (murder) is a small volume offence and, as such, is subject to substantial fluctuations over areas and across time. Thus, caution should be exercised when using percentage changes as a measure of change from one year to the next.

Central Region recorded the lowest rate while South Eastern Region recorded the highest rate. The largest increase was recorded by Metro South Region and the greatest decrease was recorded by Central Region.

Other homicide is also a small volume offence category and, as such, is subject to marked fluctuations from one year to the next and from one area to the next. As with homicide (murder), caution should be exercised when using

percentage change as a measure of change from one year to the next. In 2011/12 Central Region recorded the highest rate of other homicide while Southern Region recorded the lowest rate as well as the largest decrease.

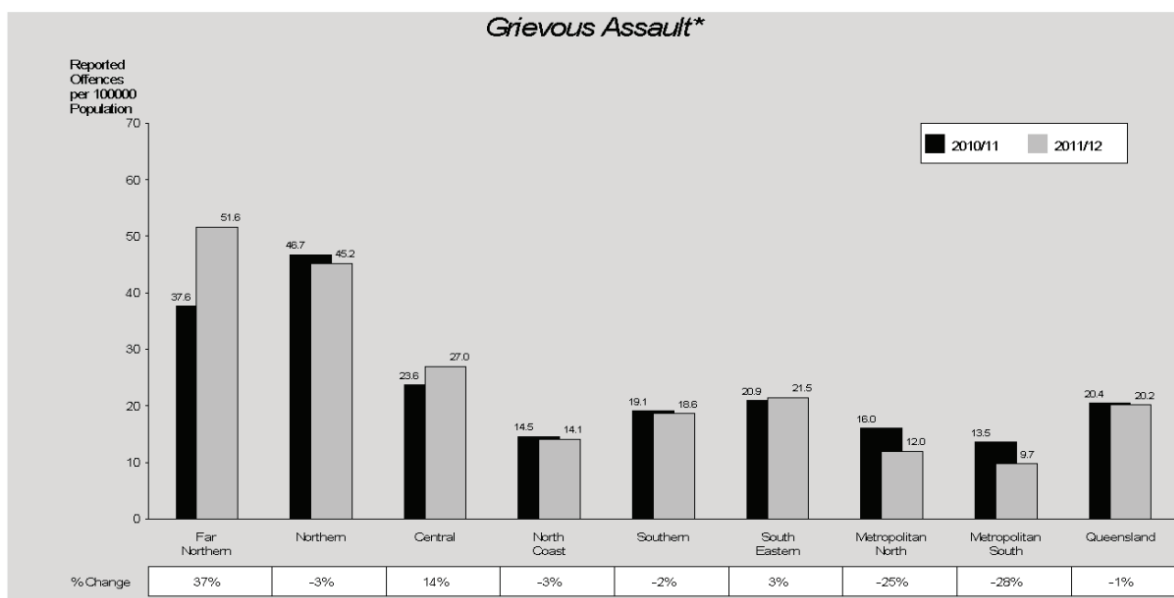

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Far Northern and Northern Regions recorded higher rates than the remaining regions, all of which recorded similar assault rates in 2011/12.

Metropolitan South Region recorded the lowest rate while Metropolitan North Region recorded the only decrease.

It should be noted this is a low volume offence category and, as such, is subject to marked fluctuations from one year to the next. Far Northern Region recorded the highest rate as well

as the largest increase of 37%. Metropolitan South Region recorded the lowest rate and the greatest decrease of 28%.

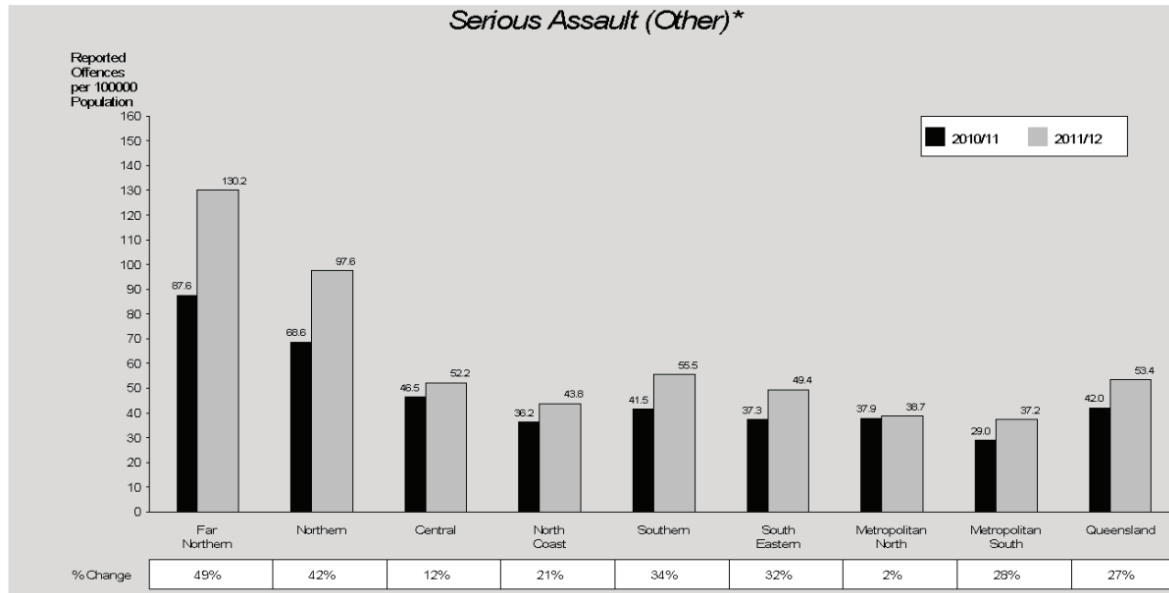

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Far Northern and Northern Regions recorded the highest rates of serious assaults and also recorded the largest increase of 15% and 16%

respectively. Metropolitan South Region recorded the lowest rate as well as the largest decrease in the State.

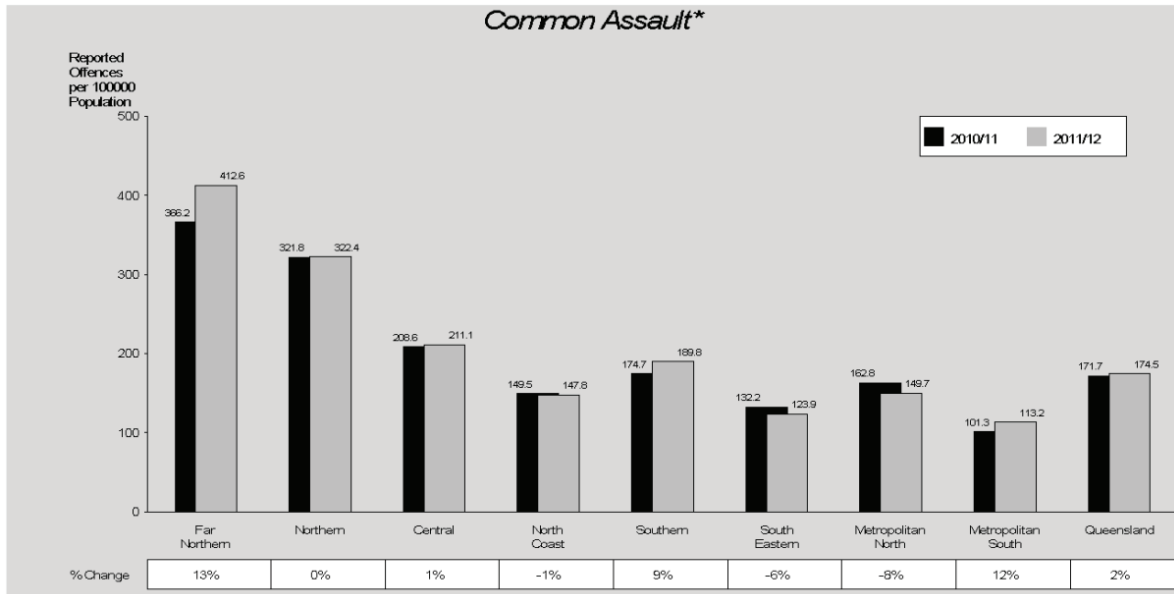

Far Northern and Northern Regions recorded the highest rates of serious assault (other) offences as well as the largest increases of 49% and 42%

respectively. Metropolitan South Region recorded the lowest rate for the current review period.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Metropolitan North Region recorded the largest decrease in common assault while Far Northern Region recorded the largest increase and the

highest rate. Metropolitan South Region again recorded the lowest rate in the State.

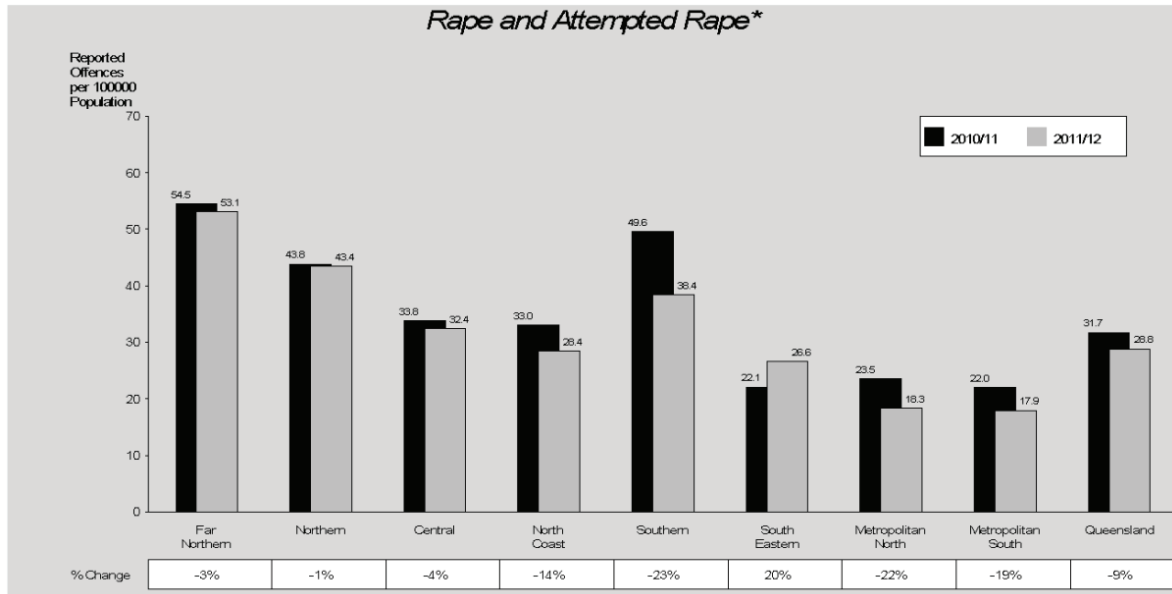

Far Northern Region recorded the highest rate of sexual offences whilst the lowest rate was recorded in Metropolitan North Region. The

greatest decrease was recorded by North Coast Region and the largest increase was recorded by Northern Region.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Decreases in rape and attempted rape offences were recorded by seven of the eight regions with Queensland recording a 9% decrease in the period under review. The highest rate was recorded by

Far Northern Region while the lowest rate of rape and attempted rape was recorded by Metropolitan South Region.

The highest rate was recorded by Far Northern Region whilst the lowest rate was recorded by Metropolitan North Region. Six of the eight

Regions recorded decreases with North Coast Region recording the largest decrease of 24% in the period under review.

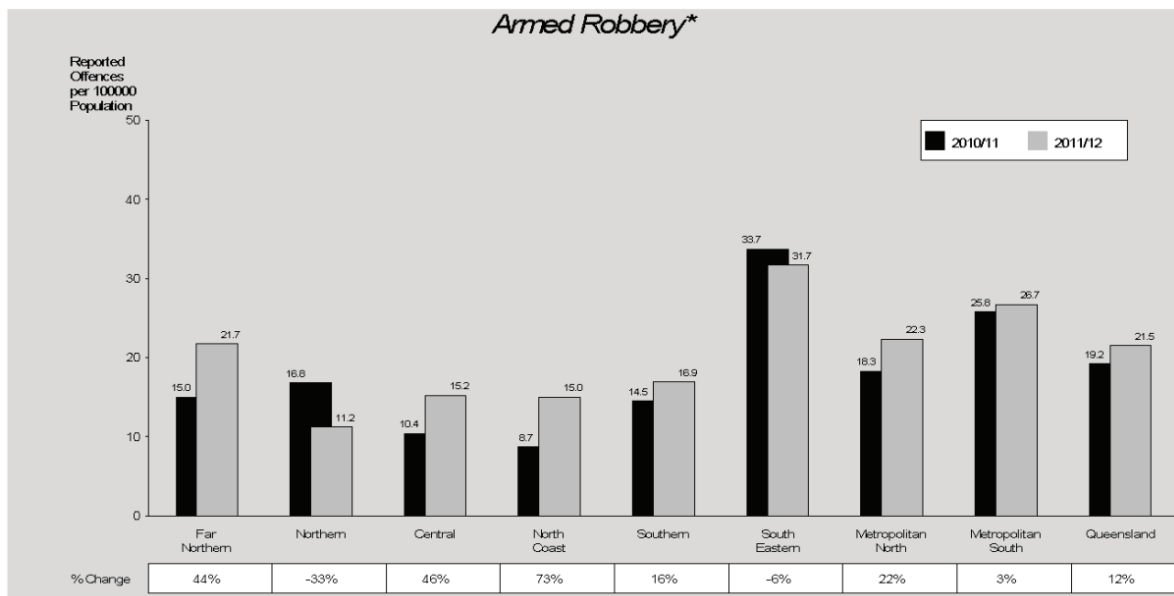

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

The south-east corner of the State typically records the highest rates of robbery and 2011/12 was no exception. South Eastern Region recorded the highest rate of 57 per 100,000 persons. In

addition, South Eastern Region recorded the largest decrease of 12%. Central Region recorded the largest increase and North Coast Region recorded the lowest rate.

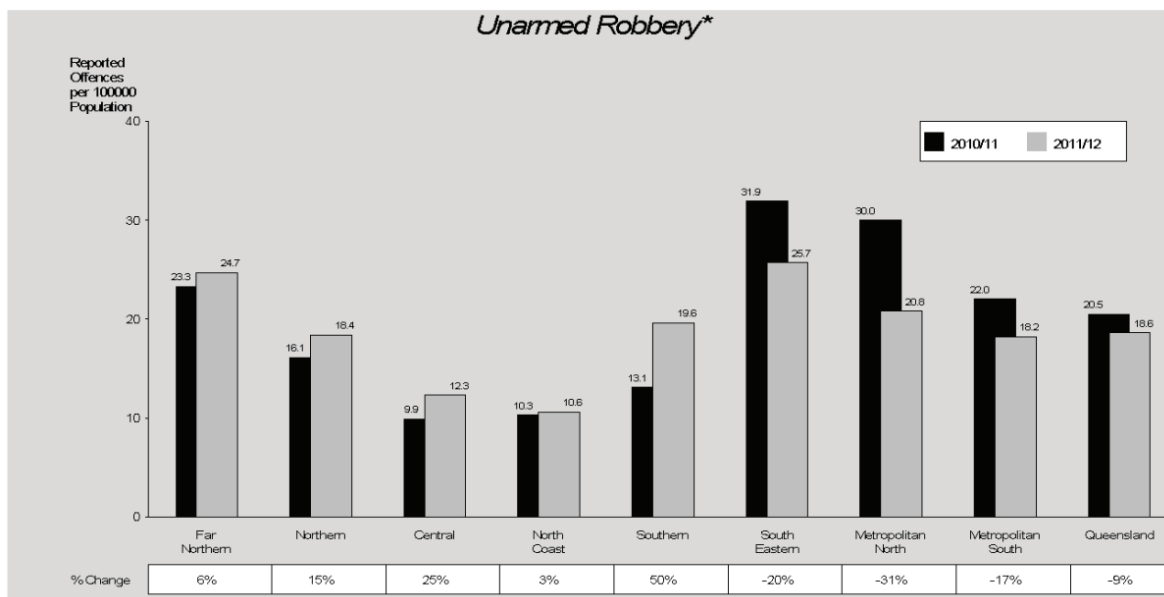

The south-east corner again recorded higher rates of armed robbery compared with the rest of the State. Northern Region recorded the largest

decrease of 33% as well as the lowest rate, while the largest increase was recorded in North Coast Region.

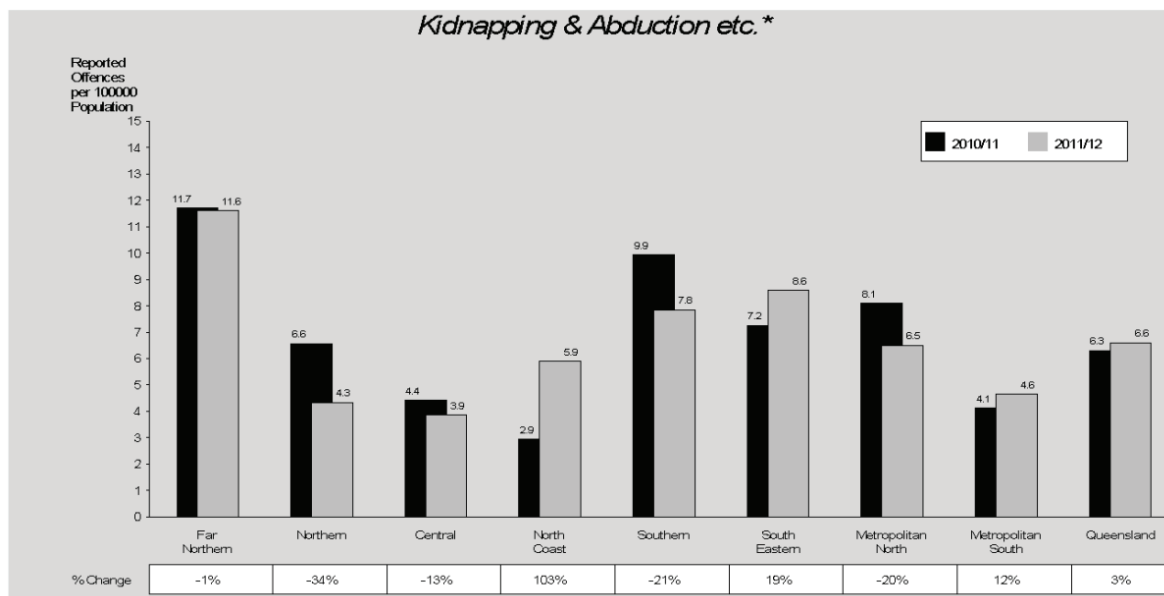

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

South Eastern Region recorded the highest rate of unarmed robbery and North Coast Region recorded the lowest. Southern Region recorded the

largest increase while Metropolitan North Region recorded the largest decrease for unarmed robbery offences in the period under review.

The highest rate of kidnapping and abduction etc. offences occurred in Far Northern Region with the largest increase being recorded by North Coast

Region. Northern Region recorded the largest decrease of 34% and the lowest rate per 100,000 persons was recorded by Central Region.

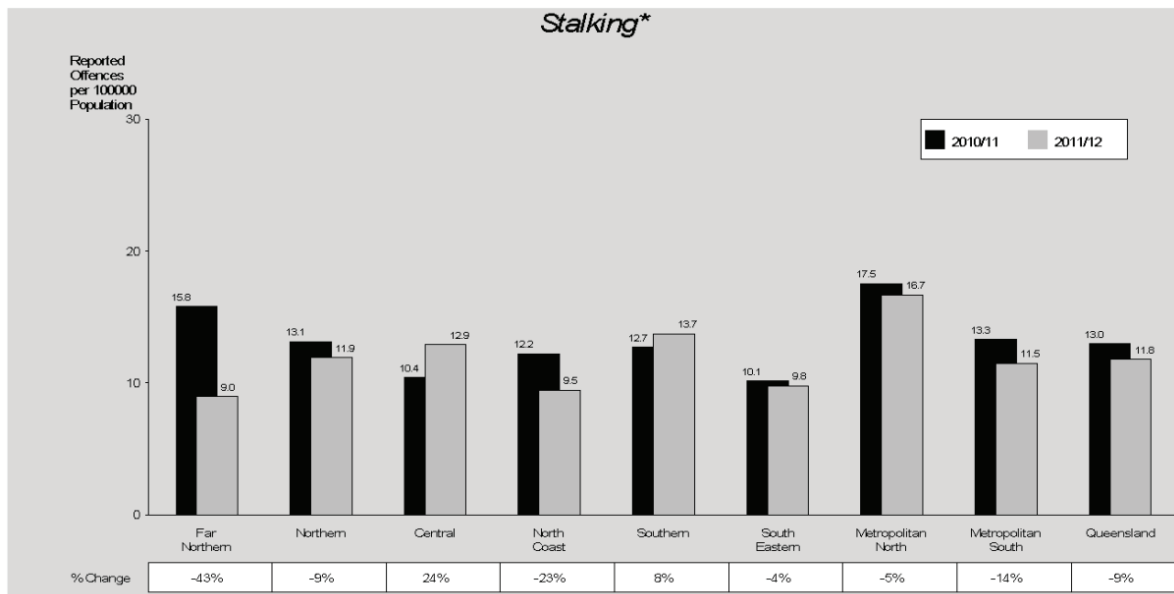

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Extortion is a low volume offence category and is, therefore, subject to marked fluctuations from area to area and from one year to the next. In 2011/12 Metropolitan South recorded the highest increase in extortion offences and North Coast

Region recorded the largest decrease of 60%. The highest rate was recorded by Metropolitan North Region while the lowest rate was recorded by North Coast Region.

Six of the eight regions recorded a decrease in stalking offences the largest of which was a 43% decrease in Far Northern Region. Metropolitan

North Region recorded the highest rate while the lowest rate occurred in Far Northern Region.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Far Northern Region recorded the highest rate of life endangering acts offences as well as the largest increase. Metropolitan South Region

recorded the lowest rate as well as the only decrease in the 2011/12 period.

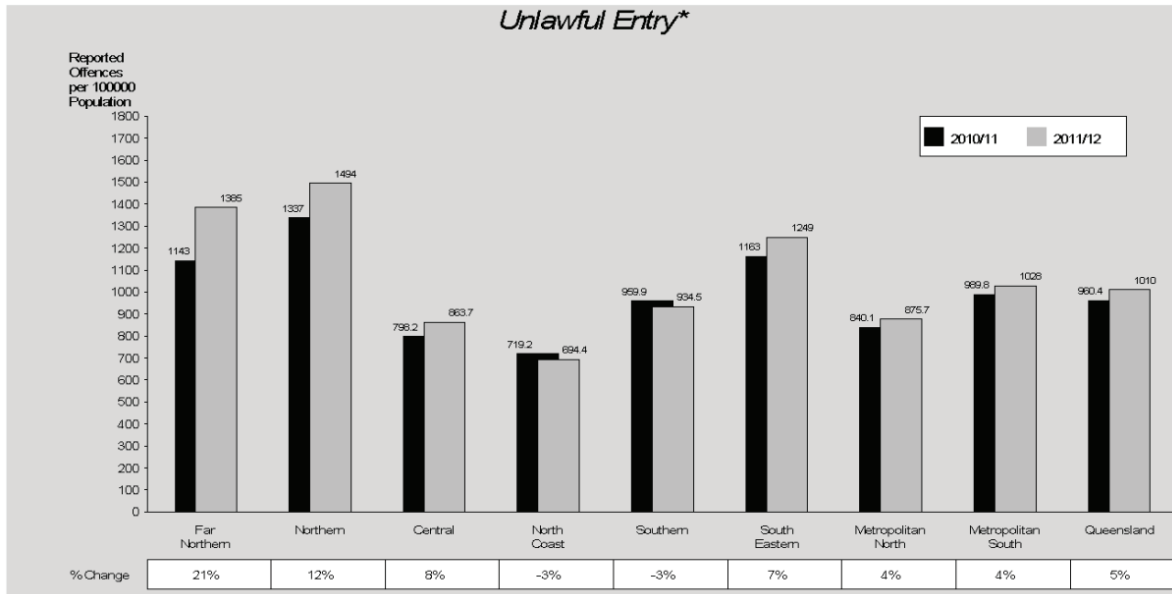

North Coast Region was the only region to record a decrease in total offences against property and also recorded the lowest rate. Northern Region

recorded the highest rate as well as the greatest increase.

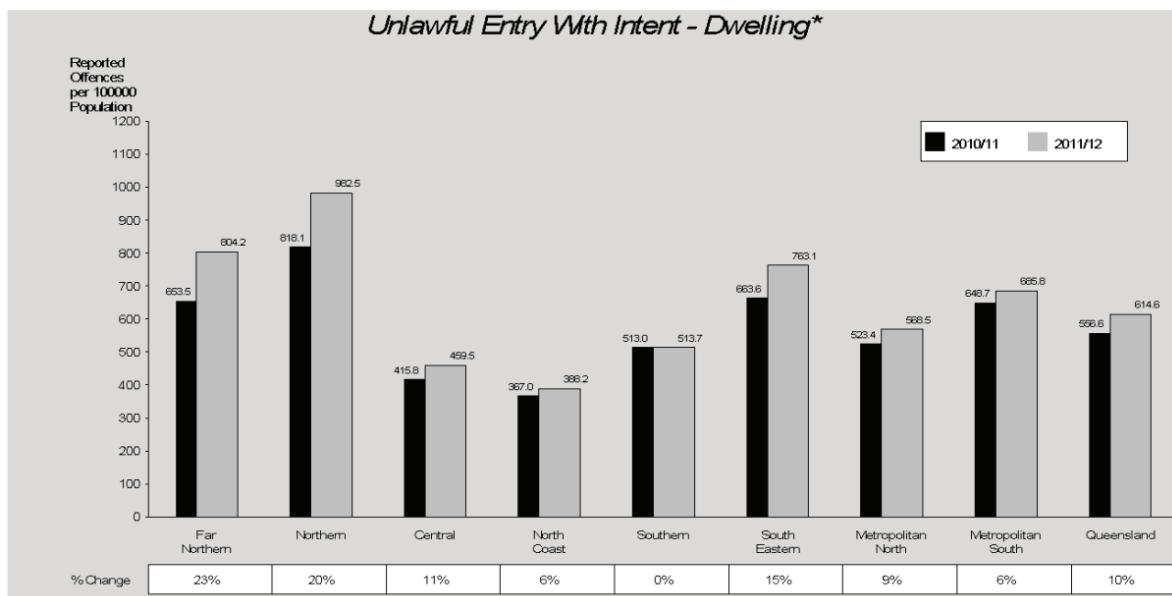

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Unlawful entry tends to dominate the offences against property aggregate as is evidenced by the similarity in the distribution of property crime.

Far Northern Region recorded the largest increase while Northern Region recorded the highest rate. The lowest rate occurred in North Coast Region.

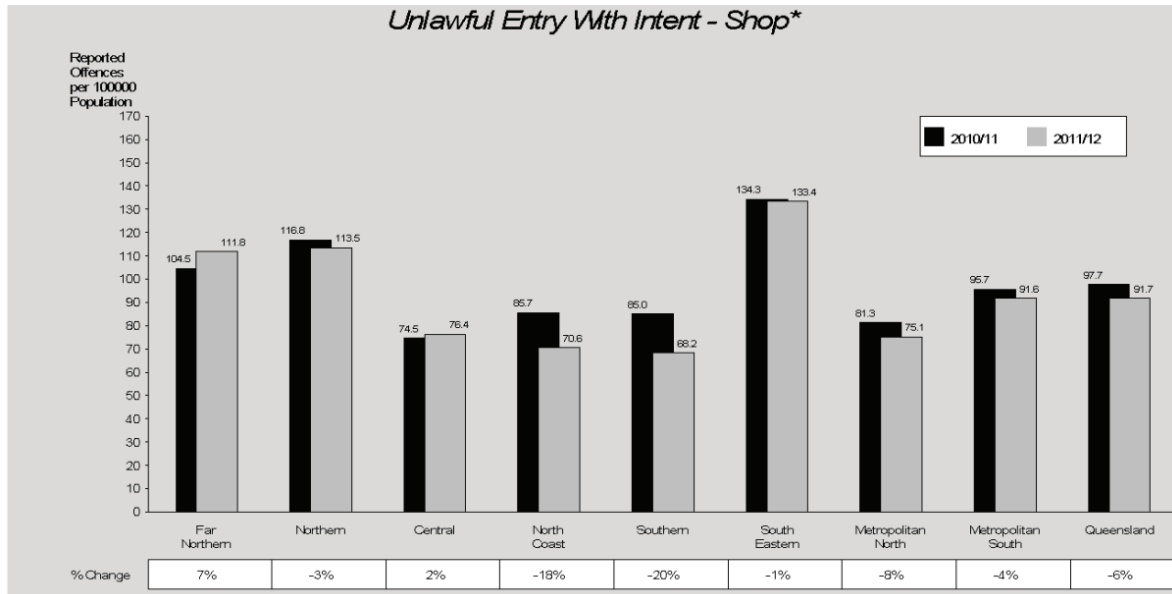

The largest increase in the rate of unlawful entry - dwellings, occurred in Far Northern Region. The lowest rate in the State occurred in North Coast

Region, while the highest rate was recorded by Northern Region.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Southern Region recorded the largest decrease and the lowest rate for unlawful entry – shop offences. The highest rate was recorded by South

Eastern Region and Far Northern Region recorded the largest increase.

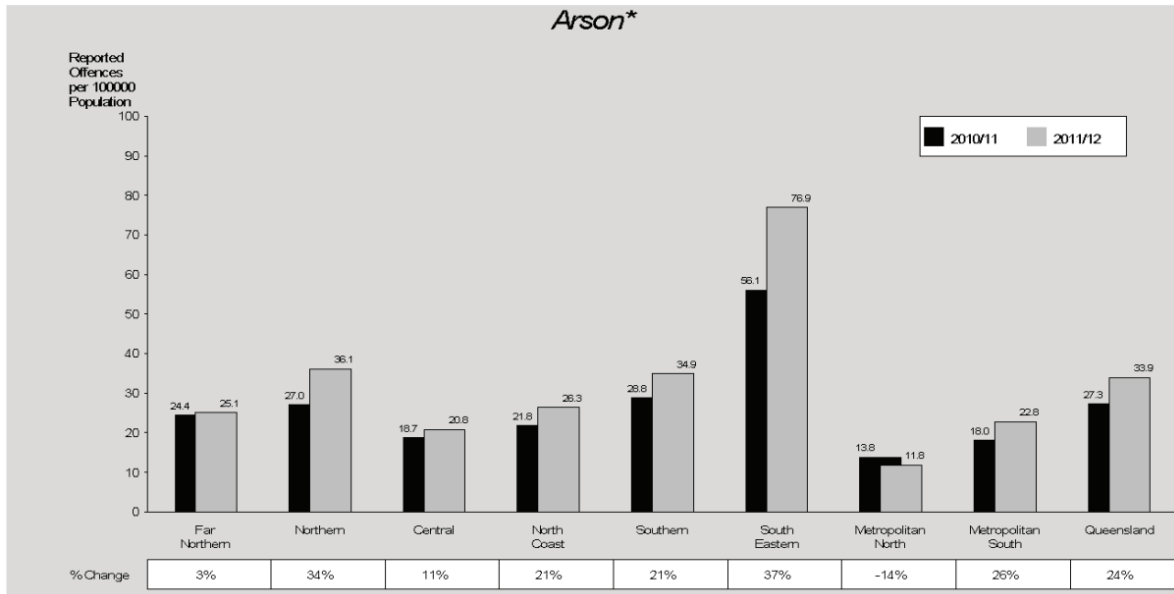

Five of the eight regions recorded decreases in unlawful entry - other premises offences which attributed to Queensland recording a 1% decrease when comparing 2011/12 with the previous year. Far Northern Region recorded the highest

rate (469 offences per 100,000 persons) while Metropolitan North Region recorded the lowest rate (232 offences per 100,000 persons). The largest decrease was recorded by North Coast Region.

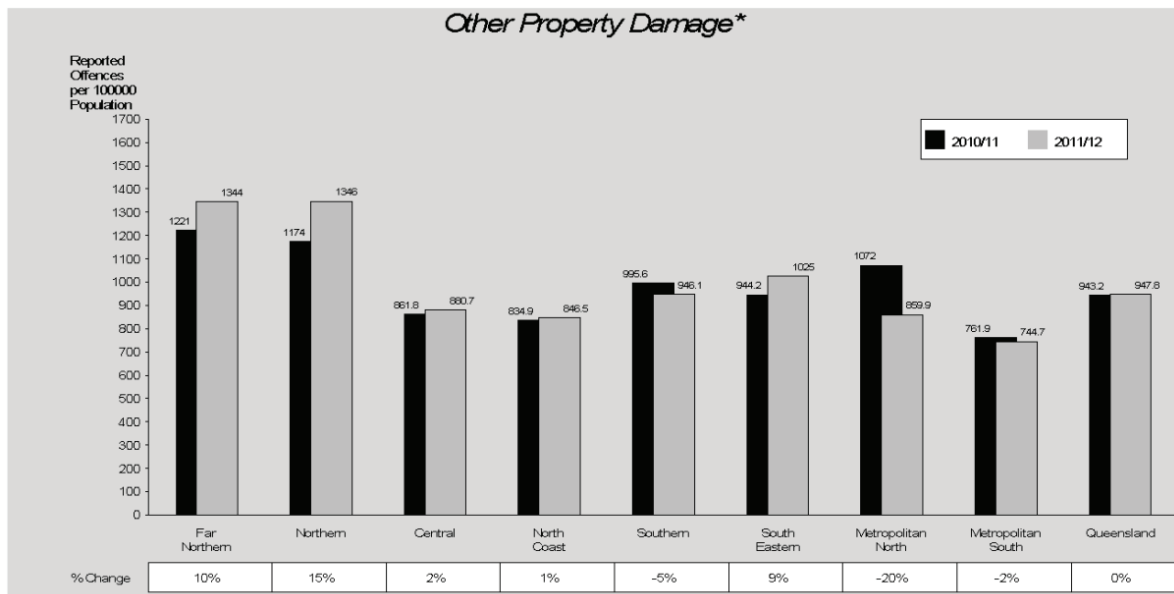

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

South Eastern Region recorded the largest rate as well as the greatest increase in Arson offences over the 2010/11 and 2011/12 period.

Metropolitan North Region recorded the lowest rate as well as the only decrease in these offences in the State.

Five of the eight regions recorded increases in other property damage offences over the 2010/11 and 2011/12 periods. The largest increase and the highest rate was recorded by Northern Region.

The lowest rate was recorded by Metropolitan South Region and the largest decrease was recorded by Metropolitan North Region.

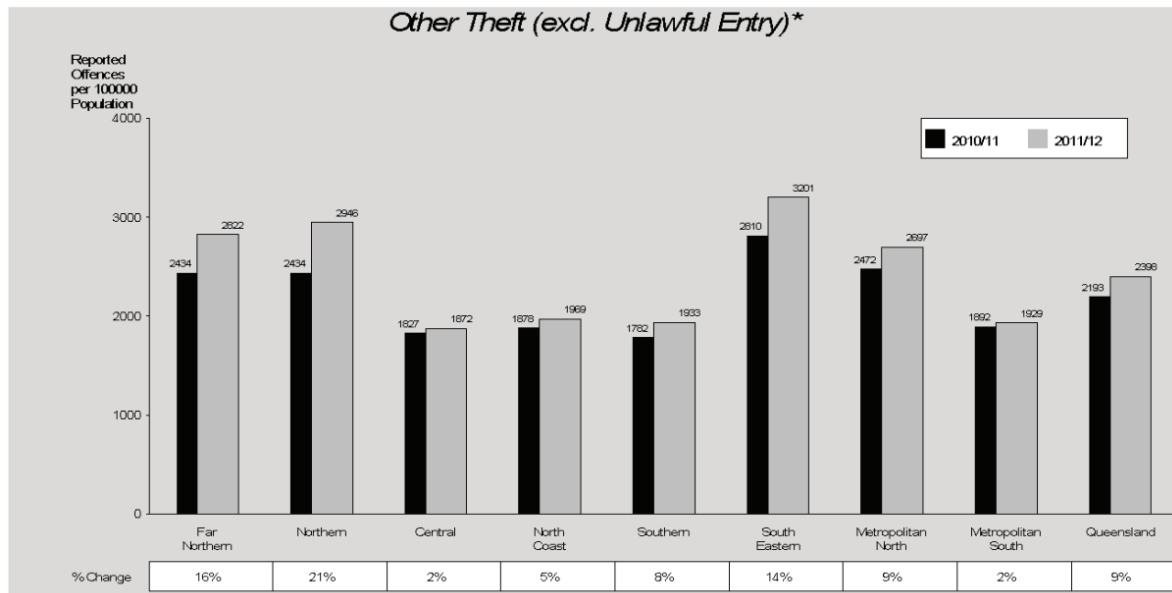

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Rates of unlawful use of motor vehicles are traditionally highest in the South Eastern Region of the State as was the case in 2011/12. North Coast

Region recorded the lowest rate and the largest increase was recorded by Northern Region.

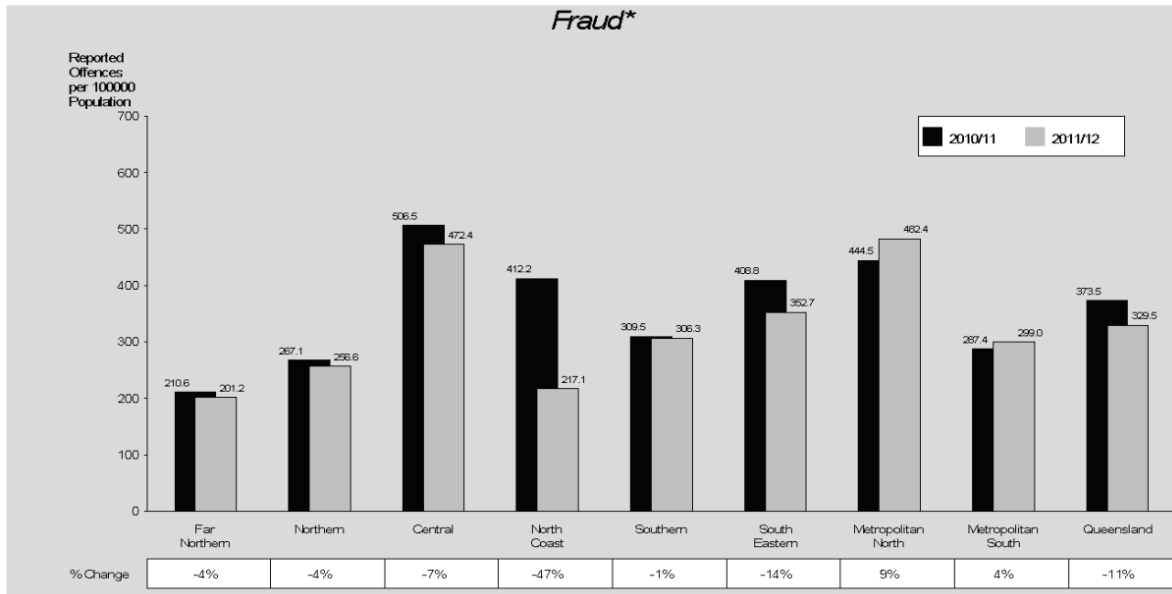

During 2011/12, all regions recorded increases in other theft (excl. unlawful entry) offences, resulting in a 9% increase recorded by Queensland overall. The highest rate of other theft

occurred in South Eastern Region while Northern Region recorded the largest increase. Metropolitan South Region recorded the lowest rate of other theft.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Metropolitan North Region recorded the highest rate of fraud offences while Far Northern Region

recorded the lowest rate in 2011/12. The largest decrease was recorded by North Coast Region.

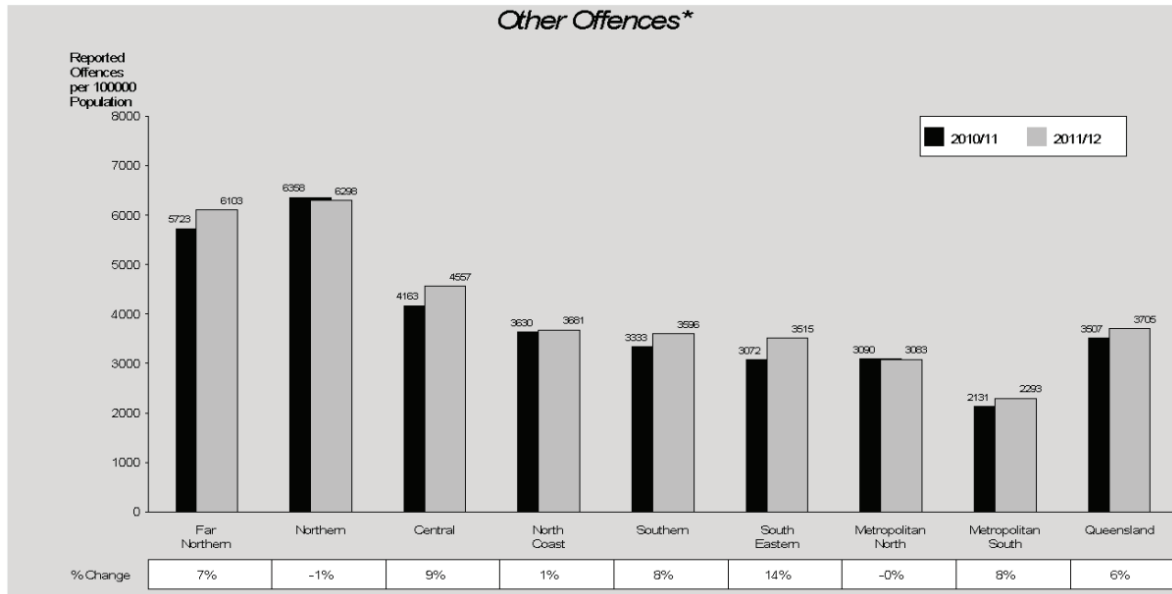

Far Northern Region recorded the highest rate in the State (162 offences per 100,000 persons) and Metropolitan South Region recorded the largest

increase. North Coast Region recorded the greatest decrease and also recorded the lowest rate.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Other offences are traditionally highest in the northern part of the State and 2011/12 was consistent with previous years with Northern Region recording the highest rate, despite

recording the only decrease. South Eastern Region recorded the greatest increase and Metropolitan South Region recorded the lowest rate for the fourteenth year running.

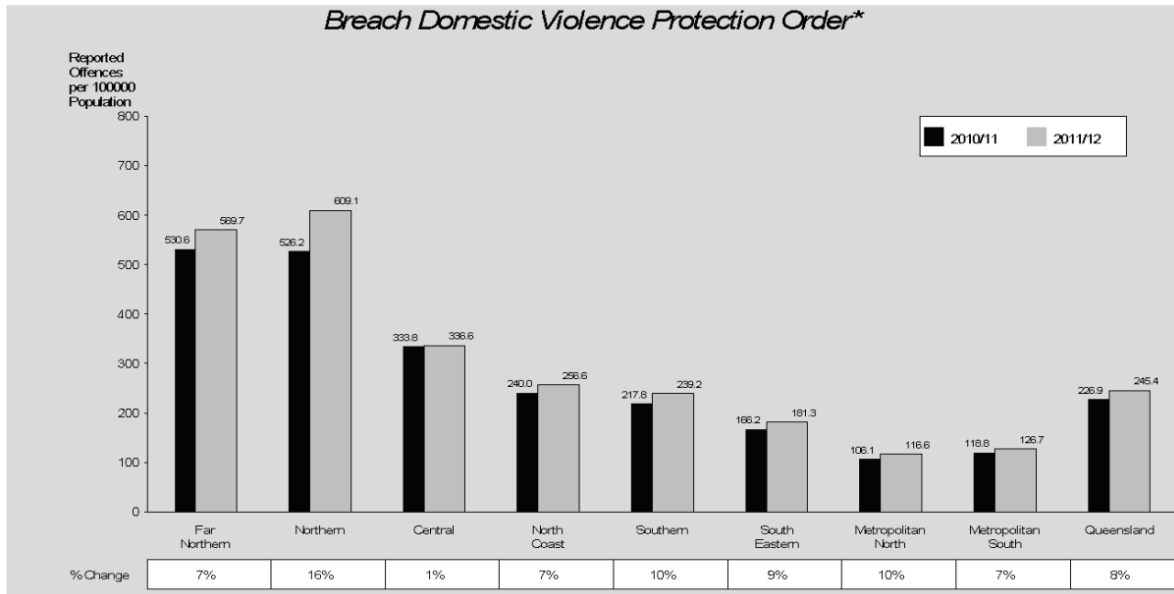

This year, the highest rate of drug offences was recorded by Far Northern Region while Metropolitan South Region recorded the lowest

rate. The highest increase was recorded by South Eastern Region while Northern Region recorded the only decrease.

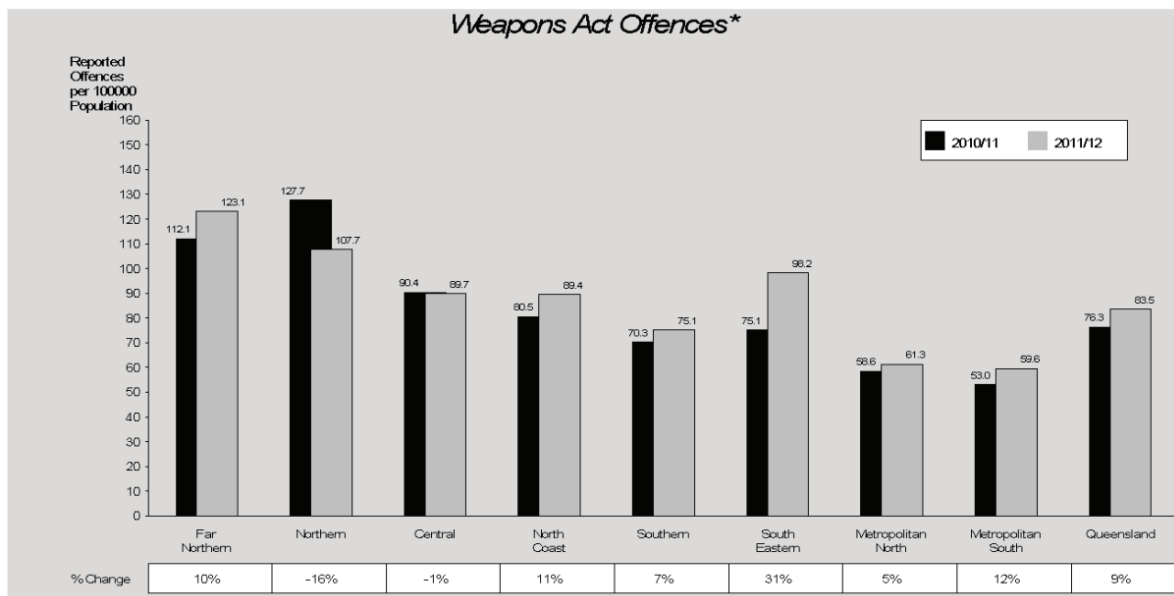

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

As in past years, the northern part of the State, Far Northern and Northern Regions, recorded the highest rates of breach of domestic violence protection orders. Also typically, the South Eastern corner of the State recorded the lowest rates.

Northern Region recorded the largest increase (16%) and also recorded the highest rate (609 offences per 100,000 persons). The lowest rate was recorded by Metropolitan North Region.

Far Northern Region recorded the highest rate in weapons act offences while South Eastern Region recorded the largest increase (31%). Northern

Region recorded the largest decrease while Metropolitan South recorded the lowest rate (60 offences per 100,000 persons).

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Regional Comparisons

Six of the eight regions recorded increases in good order offences in the 2011/12 period. The highest rate was recorded by Northern Region and the

largest increase of 17% was recorded by Central Region. As in previous years, the lowest rate occurred in Metropolitan South Region.

Traffic and related offences, of which drink driving comprises the majority of offences, recorded a 2% increase State wide during the period under review. The northern regions again recorded the highest rates of traffic offences with Far Northern

Region recording 1338 offences per 100,000 persons. Metropolitan North Region recorded the largest decrease and the lowest rate of offences.

* Although offences per 100,000 persons have been rounded to one decimal place, the actual rate was used to graph the data and calculate the percentage change between the two periods. Therefore, although the change values are correct, they may not appear so, particularly in the smaller volume offence categories.

Victims of Crime

This section contains detailed information relating to victims of offences against the person. They do not provide a unique victim count as one person may be counted several times if they were the victim of more than one offence.

There are several cases where the victim of an offence against the person is not, according to the statistical definitions used, a person. For example, the victim of an armed robbery of a bank is the banking organisation, rather than the teller, while ‘armed so as to cause fear or alarm’ is commonly a “Regina” offence, where the Crown is deemed to be the victim. Organisations which were the victims of crime were not included in the following tables and graphs.

As the graph below illustrates, females aged fifteen to nineteen years are the most common victims of offences against the person on a per capita basis. Females aged fifty-five and over are the least victimised. During 2011/12, there were slightly more male than female victims. Fifty-three percent of victims were male, while forty-seven percent of victims were female.

The Australian Bureau of Statistics’ *Population by Age and Sex, Australian States and Territories, June 2010 (3201.0)* was used to calculate the number of victims per 100,000 persons. ‘Age’ refers to the victim’s age on the date the offence was reported to police, rather than their age on the date the offence occurred.

* Only those offences where the victim’s age and sex were identified are included.

Victims of Crime

by Age and Sex - 2011/12*

* Those victims whose sex was not stated have not been included.

Victims of Crime

Low rates of victimisation for homicide (murder) offences mean that rates fluctuate across age groups and from year to year. In 2011/12, males (aged twenty to twenty four years were most likely

to be victims of homicide (murder). Overall, 68% of victims were male and 58% of all victims were aged between fifteen and forty four years.

Other homicide offences are also subject to fluctuations across age groups and from year to year as a result of low rates of victimisation. Males aged forty to forty four years were most likely to

be victims. Overall, 73% of victims were male. Of all female victims, those aged twenty to twenty four years were most likely to be victims of other homicide.

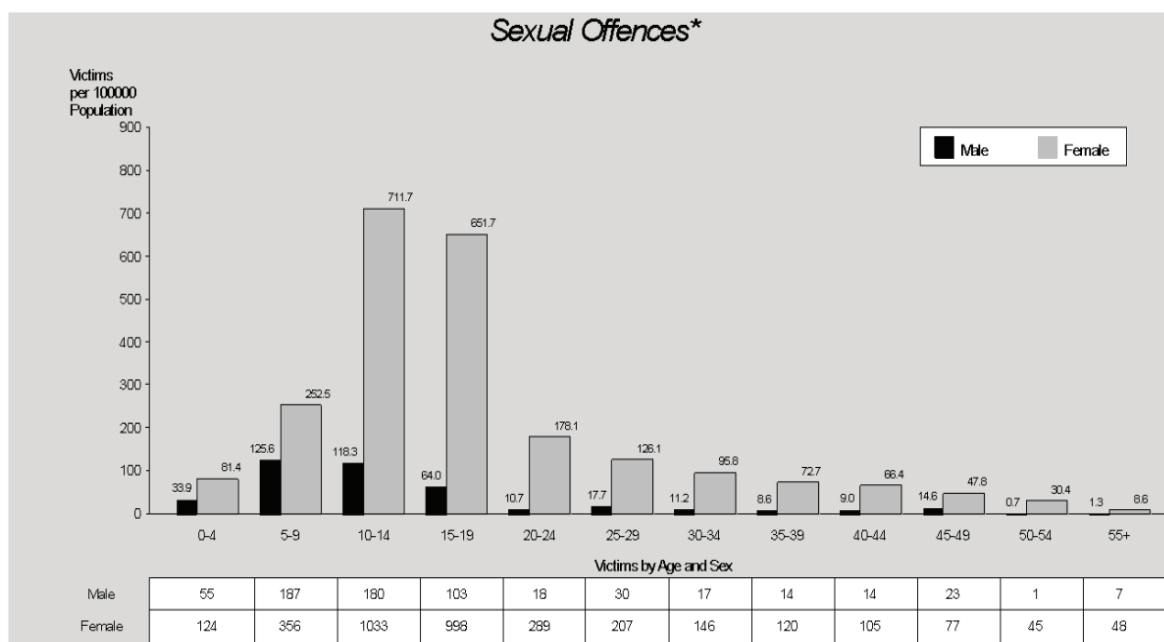

* Only those offences where the victim's age and sex were identified are included.

Victims of Crime

For every age cohort except fifteen to nineteen years, males were more likely to be victims of assault than females (60% of victims were male). Males aged fifteen to twenty-nine years were most likely to be victims. More females aged fifteen to nineteen years were victims compared

with females in other age groups. The likelihood of being a victim of assault decreased with increasing age after nineteen years. For males, likelihood of assault decreased with increasing age after twenty-nine years.

The offence category of sexual offences is unique in that the number of female victims far outweighs the number of male victims (85% of victims were female). At every age, females were significantly more likely to be victims than males with females

in the ten to nineteen years age range, the most likely. In fact, at this age females were more than seven times more likely to be victims of sexual offences than males.

* Only those offences where the victim's age and sex were identified are included.

Victims of Crime

As with most offences against the person, males were significantly more likely to be victims of robbery than females (72% of victims were male). Males aged fifteen to twenty-four years were most likely to be victims. After the age of twenty-four

years, the likelihood of being a victim decreased significantly with increasing age. Note that robbery is unique in that a large proportion of victims are companies not individuals.

Other offences against the person is an amalgam of a number of different offence types including ill treatment of children, stalking, armed to cause fear, etc. This offence category, like sexual

offences, is unique in that females are more likely to be victims than males. Females aged five to nineteen years are the most likely victims of this offence type.

* Only those offences where the victim's age and sex were identified are included.

Offender/Victim Relationships

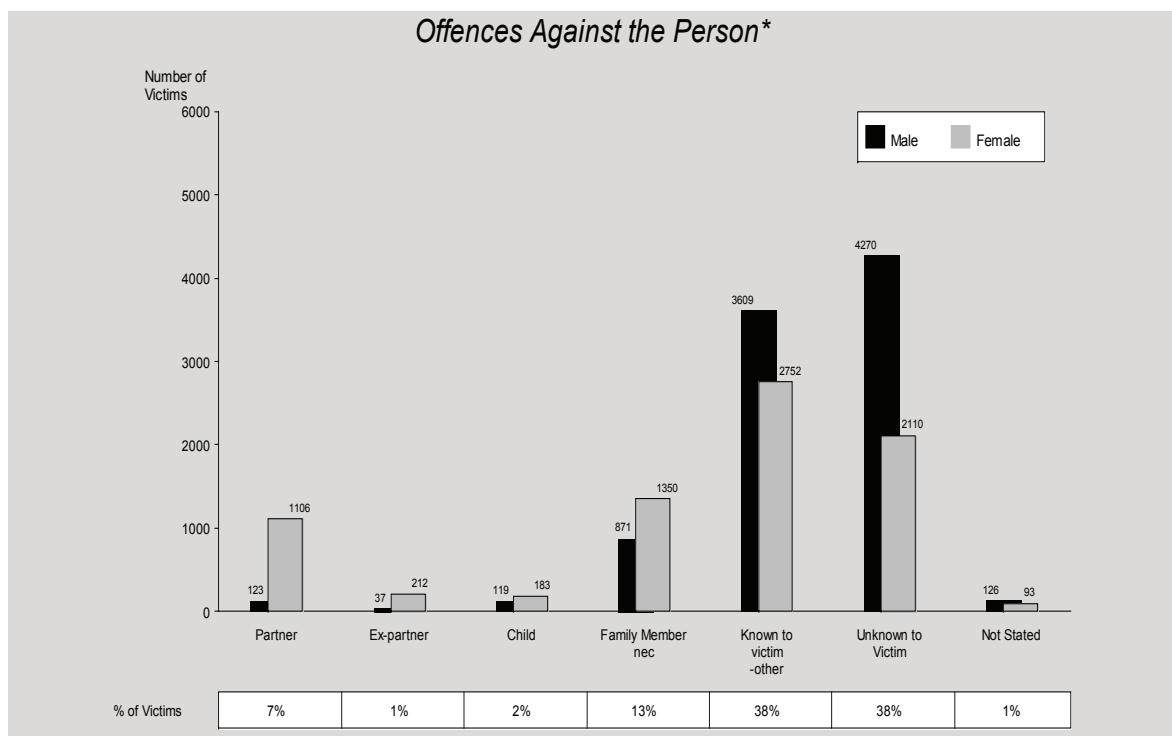

This section provides details of the types of relationships between offenders and victims for all offences against the person. Hence, only those offences that have been cleared are included in this section.

The statistics in this section are counts of victims, rather than offenders or relationships. They do not provide a unique victim count as one person may be counted several times if they were the victim of more than one offence.

The relationship classifications used are derived from those used by the Australian

Bureau of Statistics in Recorded Crime – Victims, Australia (4510.0).

As recorded in the graph below, the offender was known to the victim in sixty one per cent of the cases where the relationship was identified, including twenty-three per cent where the offender and victim were related. The remaining ‘Known to Victim’ classification includes friends, colleagues, and both professional and other acquaintances.

* Only those offences where the victim's age and sex were identified are included.

Offender/Victim Relationships

For approximately 59% of homicide (murder) offences, the offender was known to the victim. Thirty-five per cent of victims were from the same

family as the offender, and this includes partners, spouses, children, siblings, grandparents, aunts, uncles and other familial relationships.

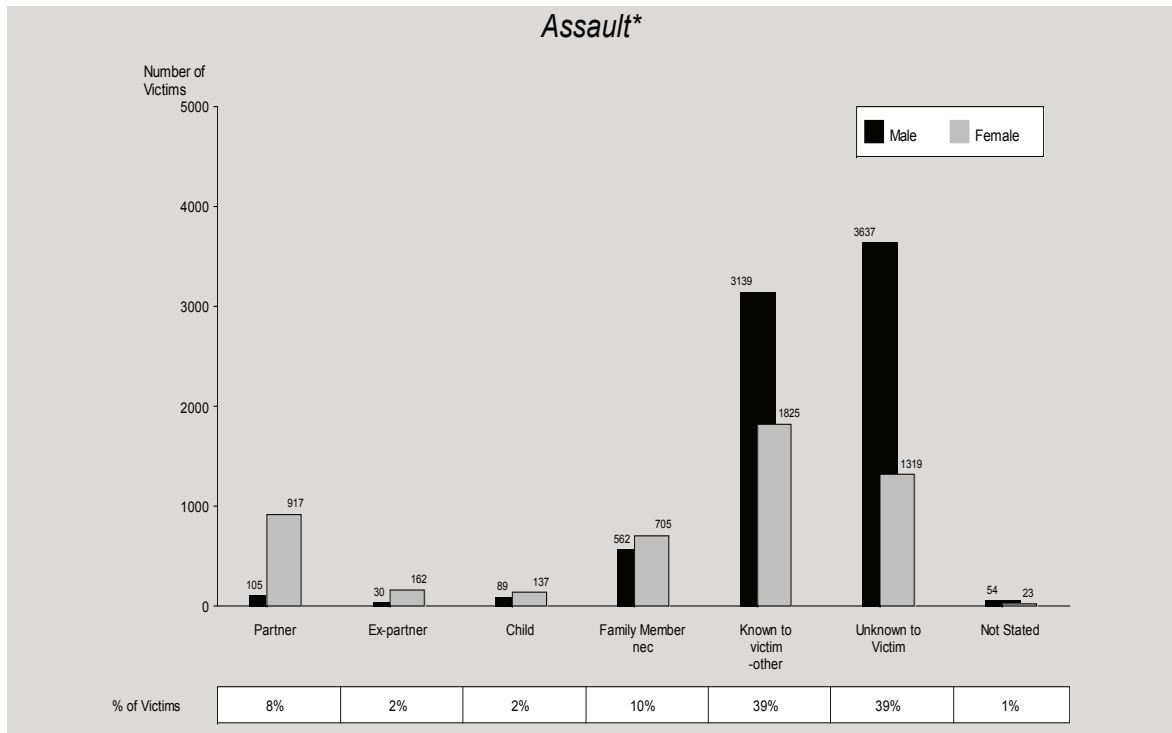

In 58% of other homicide cases, the offender was known to the victim with 22% being a family

member. In 36% of all cases the offender was unknown to the victim.

* Only those offences where the victim's age and sex were identified are included.

Note: Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%.

Offender/Victim Relationships

For all victims of assault, 39% were not known to the offender. In 21% of cases, the offender was a family member and a further 39% were known

to the offender either as friends, acquaintances, neighbours or colleagues.

For a substantial proportion of victims of sexual offences (approx. 74%), the offender was known to the victim. A large proportion of victims (33%)

were of the same family as the offender while 41% were either acquaintances, friends, neighbours or colleagues.

* Only those offences where the victim's age and sex were identified are included.

Note: Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%.

Offender/Victim Relationships

In most cases (82%), the offender was not known to the victim. Robbery is unique in that very few offences are committed by family members with

only 2% of robbery offences involved offenders who were related to the victim in this reporting period.

In 65% of cases the offender was known to the victim with approximately 35% the offenders were

related to the victim and the remaining 30% who were known to the victim.

* Only those offences where the victim's age and sex were identified are included.

Note: Percentages have been rounded to the nearest whole number. Therefore, although the percentages are correct, they do not add to 100%.

Offenders

The tables and graphs in this section provide information on persons responsible for offences. It is important to note that Queensland Police Service offender statistics are based on offence counts and do not and can not refer to individuals. Rather, offender data refers to the number of offences cleared or solved through an action against an offender. As such, offender data does not equate to a unique offender count nor does it equate to the number of offences cleared. For example, an offender charged with motor vehicle theft, unlawful entry, assault and other theft (excl. unlawful entry) would be included four times in any offender breakdown by age and sex.

Only persons aged ten years and over are deemed to be offenders. Under Queensland law, children under ten are not held criminally responsible, although they

may be involved in the commission of an offence. Juvenile offenders are those aged between and including ten and sixteen years.

Offenders have not been included if their age or sex is not specified in Queensland Police Service records. Less than 1% of offenders have been excluded for this reason.

The Australian Bureau of Statistics' *Population by Age and Sex, Australian States and Territories, June 2010* (3201.0) was used to calculate the number of offenders per 100,000 persons.

The reference date used to generate offender statistics for the year under review is the date an action commenced. As such, offenders proceeded against for matters reported in previous periods will be included in the following tables and graphs.

* Only those offenders whose age and sex were identified are included.

This category includes attempted offences.

* Only those offenders whose age and sex were identified are included.

Offenders

For all age groups, except fifteen to nineteen years, males were more likely than females to commit homicide (murder) with males aged twenty to thirty-nine years representing 58% of

all offenders. Of those proceeded against for Homicide, 84% were male.

Males aged twenty to twenty-nine years were most likely to commit other homicide offences. At every age, except fifty five and older, males committed more offences than females. In total, only 19%

of those proceeded against for other homicide offences were female. Males aged fifteen to thirty four accounted for 54% of all offenders in this offence type.

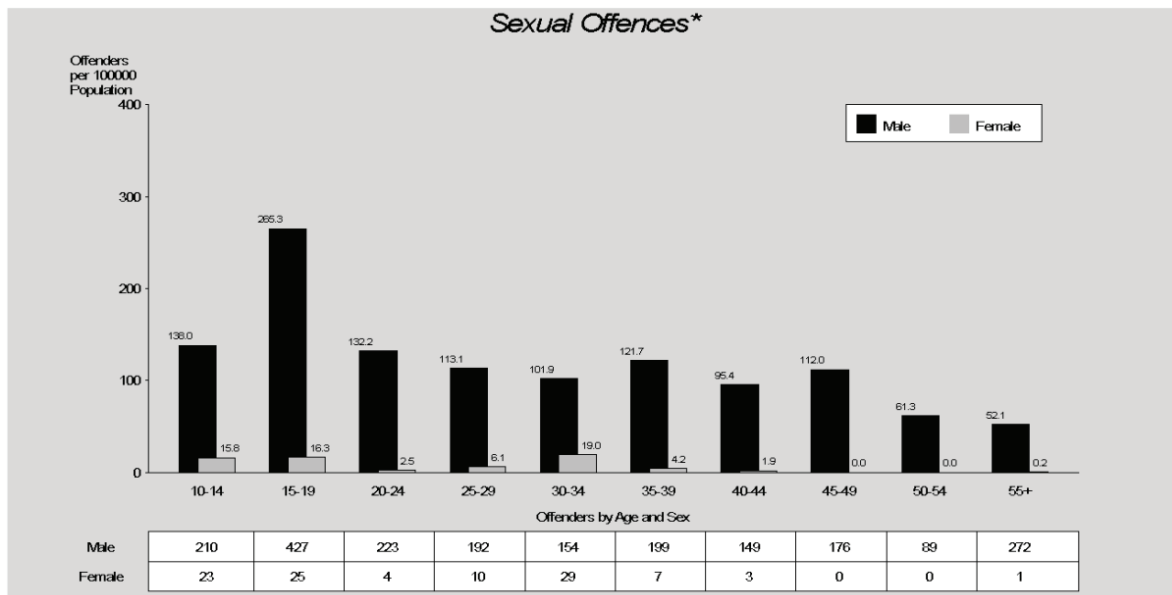

* Only those offenders whose age and sex were identified are included.

Offenders

As with most offence types after the age of nineteen years, the likelihood of committing assault offences, decreases with increasing age for both males and females. Approximately 73%

of offenders were male. In fact, 47% of offenders were male aged fifteen to thirty four years. Both males and females in the fifteen to nineteen year age cohort were most likely to offend.

Sexual offences are unique in that the likelihood of offending does not decrease with increasing age to the same extent as other offences. In addition, most offenders were male (95%). During

the 2011/12 financial year, there were 102 female offenders for sexual offences across the State compared with 2,088 males.

* Only those offenders whose age and sex were identified are included.

Offenders

Approximately 85% of offenders were male. Males and females in the fifteen to nineteen year age group were more likely to offend. In fact, males aged fifteen to nineteen years comprised 35%

of all offenders. Offenders over the age of thirty five years make up only 12% of total offenders of robbery offences.

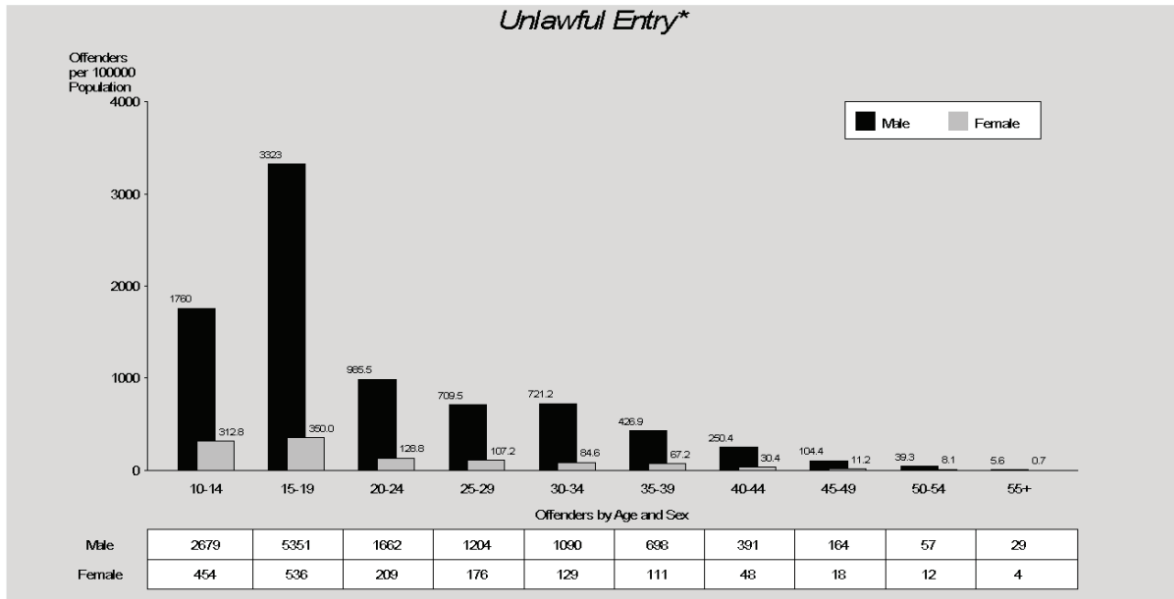

Males aged fifteen to nineteen years were over three times more likely to commit offences against property than females in the same age group. In total, only 23% of offenders were female. At every

age, males were more likely than females to offend for offences against property. The likelihood of offending after nineteen years of age, decreased with increasing age.

* Only those offenders whose age and sex were identified are included.

Offenders

As with most offence types, a large proportion of unlawful entry offenders were male aged fifteen to nineteen years with very few offences being

committed by persons over thirty-nine years. Approximately 73% of offenders were male aged between ten and twenty-nine years inclusive.

Approximately 53% of those proceeded against for arson offences were male aged between ten and nineteen years, with males accounting for 87%

of all offenders. Females accounted for only 13% of offenders, with 63% of female offenders aged between ten and twenty four years.

* Only those offenders whose age and sex were identified are included.

Offenders

As with most offences against property, the largest proportion (35%) of other property damage offenders were male aged between fifteen and nineteen years. At every age, males were more likely to offend than females (87% of offenders

were male). In addition, as with most offences against property, there were very few offenders in the older age groups with 3% of offenders aged forty-five and older.

Approximately 41% of unlawful use of motor vehicle offenders were male aged fifteen to nineteen years. While only 15% of offenders were female, 43% of female offenders were aged fifteen

to nineteen years. There were very few offenders (only 4%) in the older age groups (forty years and over). Please note that attempted offences are included in this category.

* Only those offenders whose age and sex were identified are included.

Offenders

The other theft (excluding unlawful entry) offence category is one of a small number of offences against property committed by a substantial proportion of females. In 2011/12, 33% of

offenders proceeded against for other theft (excluding unlawful entry) offences were female. Approximately 23% of the total offenders were male in the fifteen to nineteen year age cohort.

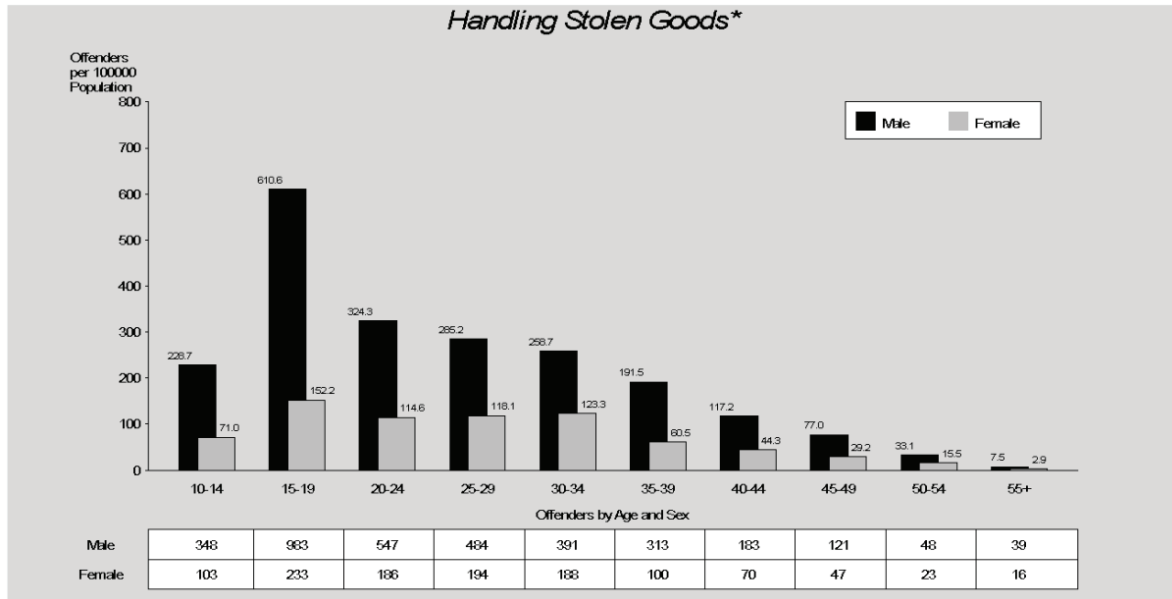

Fraud is another of the offences against property for which a relatively high proportion of offenders are female. In 2011/12, 37% of those proceeded against for fraud were female. Males aged twenty

to thirty-four years were most likely to offend (in fact, 55% of all male offenders were in this demographic).

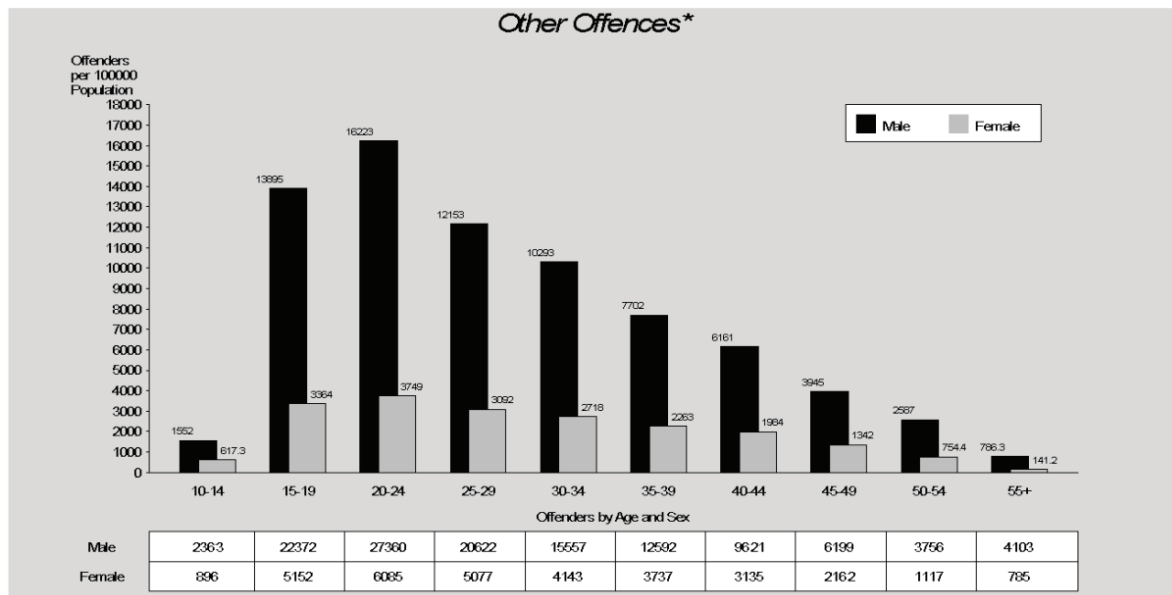

* Only those offenders whose age and sex were identified are included.

Offenders

In all age groups, males were more likely than females to offend for handling stolen goods offences (75% were male). For both males and females, those in the fifteen to nineteen year age

group were most likely to offend. As with most offence types the risk of offending, after the age of nineteen, decreased significantly with increasing age.

The majority (79%) of offenders for other offences were male, with males aged fifteen to twenty-nine years comprising 46% of offenders in 2011/12.

Approximately 59% of offenders were aged under thirty years.

* Only those offenders whose age and sex were identified are included.

Offenders

Approximately 77% of offenders for drug offences were male, with the majority aged between fifteen and twenty four years inclusive. Females in the fifteen to twenty-nine year age bracket were also

more likely to offend compared with those in other age groups. Unlike other offence categories, a sizeable proportion (19%) of offenders were aged over thirty-nine years

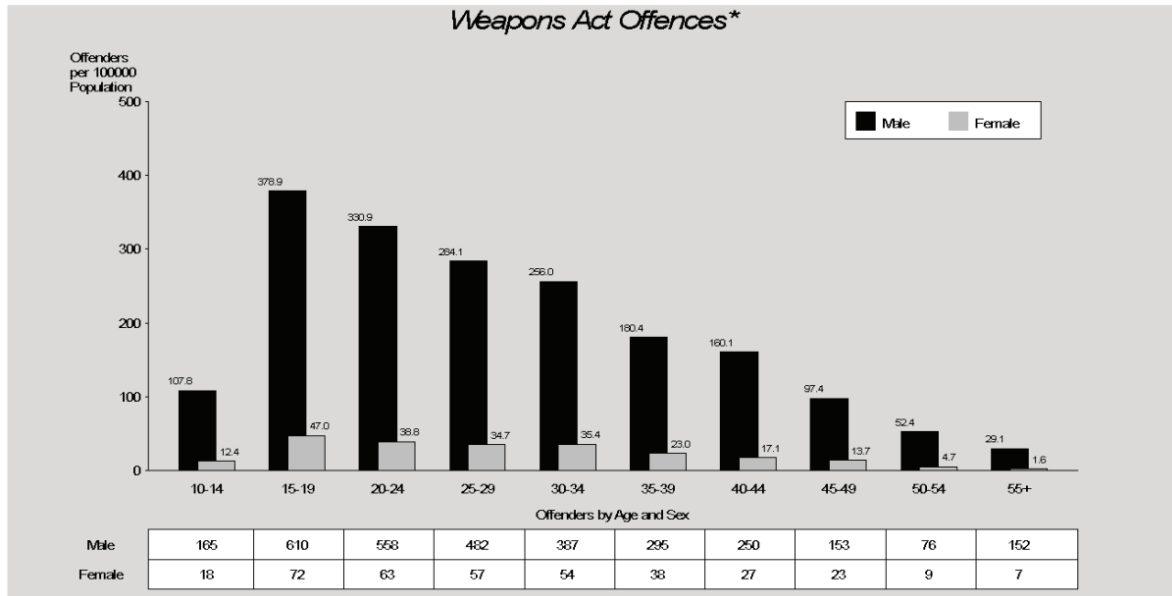

Approximately 86% of offenders for breach of domestic violence protection orders were male and most were aged between twenty and thirty-

nine years (60%). Unlike other offence categories, a significant proportion of offenders (26%) were in the older age groups (forty years and over).

* Only those offenders whose age and sex were identified are included.

Offenders

Approximately 89% of those actioned against for weapons act offences were male and most were aged fifteen to nineteen years. For females, those aged fifteen to thirty four years were most

likely to offend (67% of all female offenders). As is evidenced in the graph above, the risk of offending after the age of nineteen decreased as age increased.

Patterns of offending for good order offences are typical of those displayed in most offence categories. The majority of offenders were male (80%) with males in the fifteen to twenty-four

age group most likely to offend (41% were in this demographic). After the age of twenty-four years, the likelihood of offending decreased with increasing age.

* Only those offenders whose age and sex were identified are included.

Crime Locations

This section provides a breakdown of crime by the type of location in which the offence occurred. The location classifications are based on those used by the Australian Bureau of Statistics in compiling the Recorded Crime - Victims, Australia (4510.0). A crime location is

defined as the initial site where a criminal incident occurred, classified by the primary function of that site where the site has more than one function. This definition may encompass any surrounding land, yard, car parking area, together with any other structures existing at the location.

* Only those offenders whose age and sex were identified are included.

** Community By-Law offences cannot be separated into offences with and without violence. As such, sub-categories may not add to the total.

This category includes attempted offences.

District Crime

In this section, a detailed examination of reported and cleared crime is provided for the Queensland Police Service's statistical regions and districts during the 2011/12 financial year.

The tables include some offences where the Police District in which the offence occurred cannot be identified according to current police boundaries. There are two instances where this may occur:

- The offence was detected as part of a covert operation, and the location of the

offence has not currently been recorded to maintain security; and

- The accuracy of the address has not been determined at the time that the data was extracted for inclusion in this publication. That is, the address was not verified.

In these cases, the offences have been included in the highest hierarchical geographical level available. Therefore, police district statistics may not always sum to regional totals, or regional statistics to Queensland totals.

* Only those persons whose age and sex were identified are included.

The accuracy of the address has not been determined at the time that the data was extracted for inclusion in this publication. Therefore, police district statistics may not always sum to regional totals, or regional statistics to Queensland totals.

Traffic

This section contains information relating to the number of road fatalities, drink driving offences, traffic crashes, speed, red light camera offences, vehicle impoundments and random breath tests within Queensland.

All data included in this section were provided by the State Traffic Support Branch, Queensland Police Service and are current as at 30 June 2012.

* Casualty data obtained from WebCrash 2.3 database. Population data by Region and District sourced from Statistical Services and extrapolated to December 2010 and 2011 for calculating fatality rates. December 2010 and 2011 population figure for Queensland total fatality rate was sourced from ABS Catalog 3101.0 (December 2010 issue).

Note: The aggregate of district totals may not equal regional totals [see detailed explanation on page 105].

* Data is extracted from the Traffic Scheduling & Reporting System, Integrated Traffic Camera System and Image and Infringement Processing System. These systems are live databases and the reported statistics are subject to change on a daily basis. Offences from road safety cameras do not necessarily result in the issuing of an infringement notice. Offences from cameras are adjudicated by an accredited Traffic Camera Office staff member. The adjudication process assesses whether there is sufficient evidence to meet legal requirements to issue an infringement notice. Differences observed between offences and notices will be the result of this adjudication process.

** Not all regions are represented in this dataset as cameras are only located in five of the eight police regions.

^ This category has previously reported only analogue fixed speed camera data. During the current reporting period, a number of other safety camera types have commenced operations. The 2011/12 figures include data for analogue and digital speed cameras, digital combined speed/red light cameras and the digital average speed camera system.

Queensland	637	624	-2	7231	7773	7

* Data sourced from QPRIME Information Analysis ZAP Report on 10/09/2012 and is preliminary and subject to change.

Traffic

Queensland's road fatality rate for the 2011/12 financial year was 6 fatalities per 100,000 persons. Queensland recorded 9% decrease in the rate per 100,000 persons when compared with the previous year.

^ The aggregate of region totals do not equate to the number of tests conducted statewide.

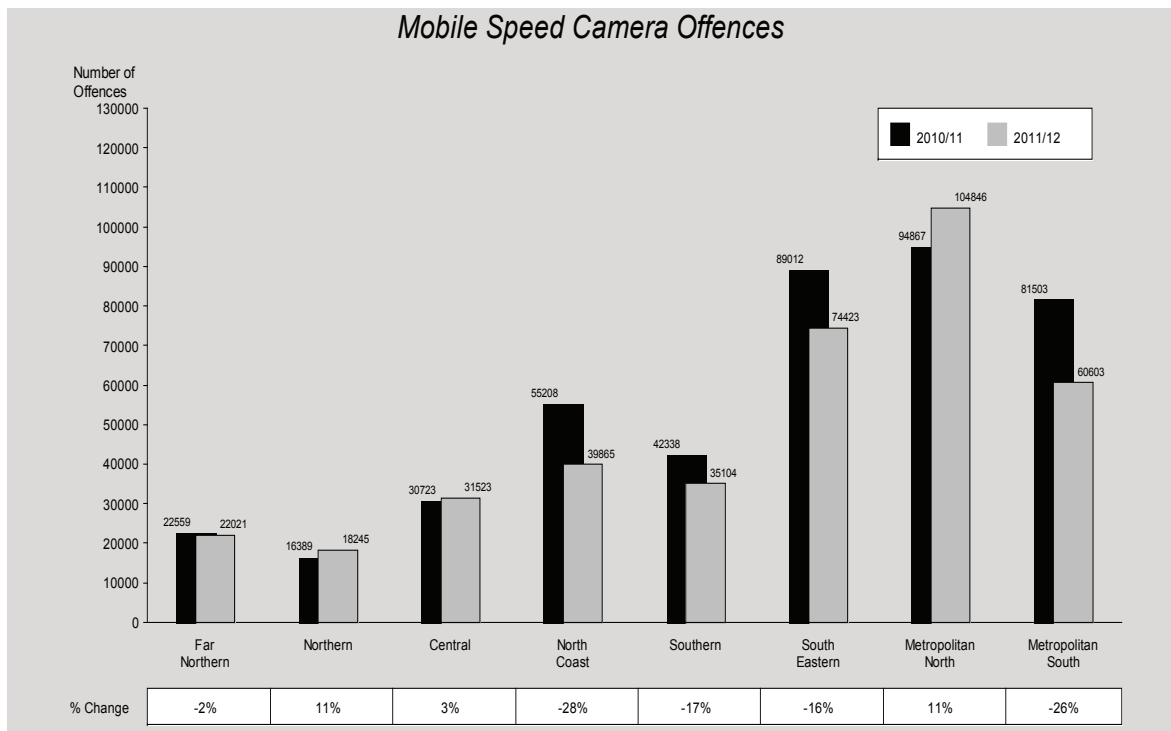

* The total is not inclusive of State traffic Task Force figures.

Traffic

Metropolitan South Region recorded the highest rate of red light speed camera detections while Far Northern Region recorded the lowest rate.

Central Region recorded the greatest increase and Northern Region recorded the largest decrease in the State.

Metropolitan North Region recorded the highest rate of mobile speed camera detections while Northern Region recorded the lowest. North

Coast Region recorded the greatest decrease and Metropolitan North and Northern Regions recorded the greatest increase in the State.

Crime Statistics in Focus

This chapter has been introduced to provide a detailed examination for selected topics of public interest.

The tables offer information on the reported number and rate per 100,000 persons

for public nuisance offences, Move-on Directions and assaults on Police. These statistics have been provided for the Queensland Police Service's statistical regions and districts.

1 The region total for Actual Strength includes employees for Regional Functions and the Brisbane Watchhouse.

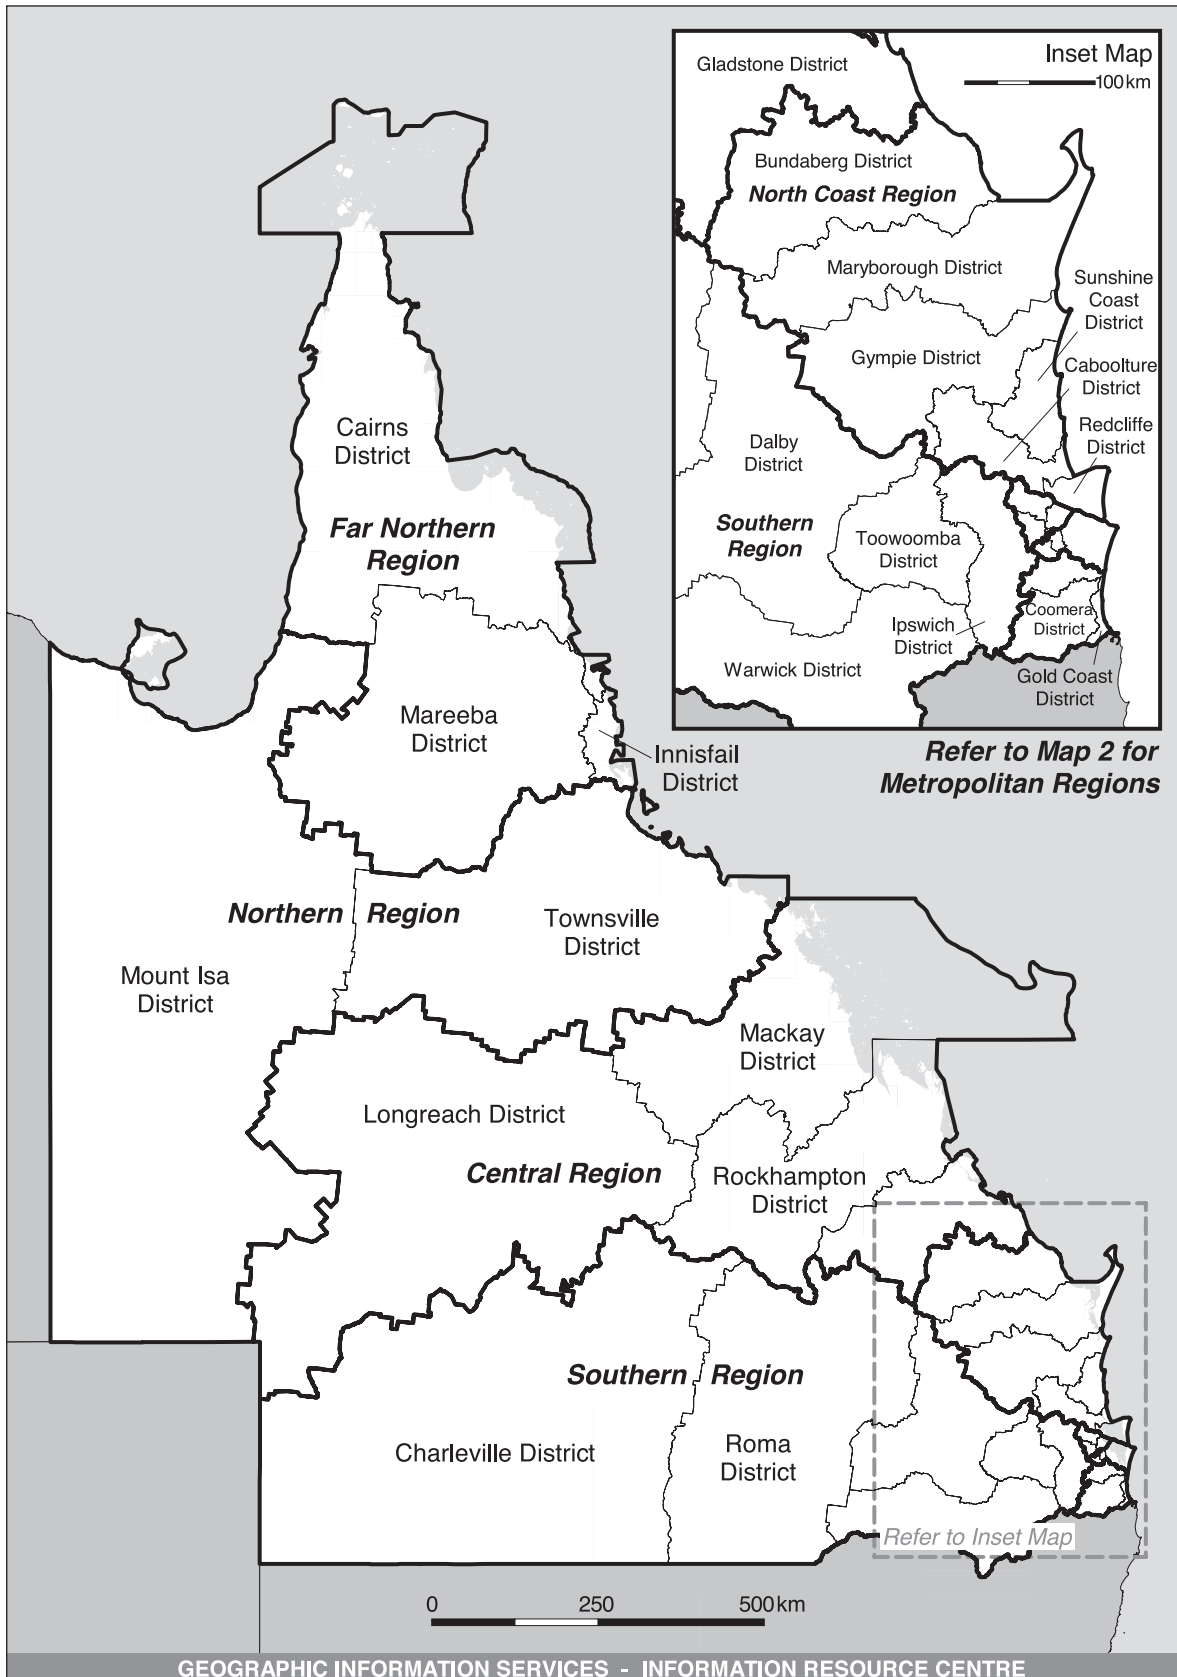

2 Due to the rounding, the aggregate of region totals do not equate to the Queensland total.

3 Staff Members include Public Service Officers, Police Liaison Officers, Assistant Watchhouse Officers, Queensland ATSI Police and other Temporary and General Employees.

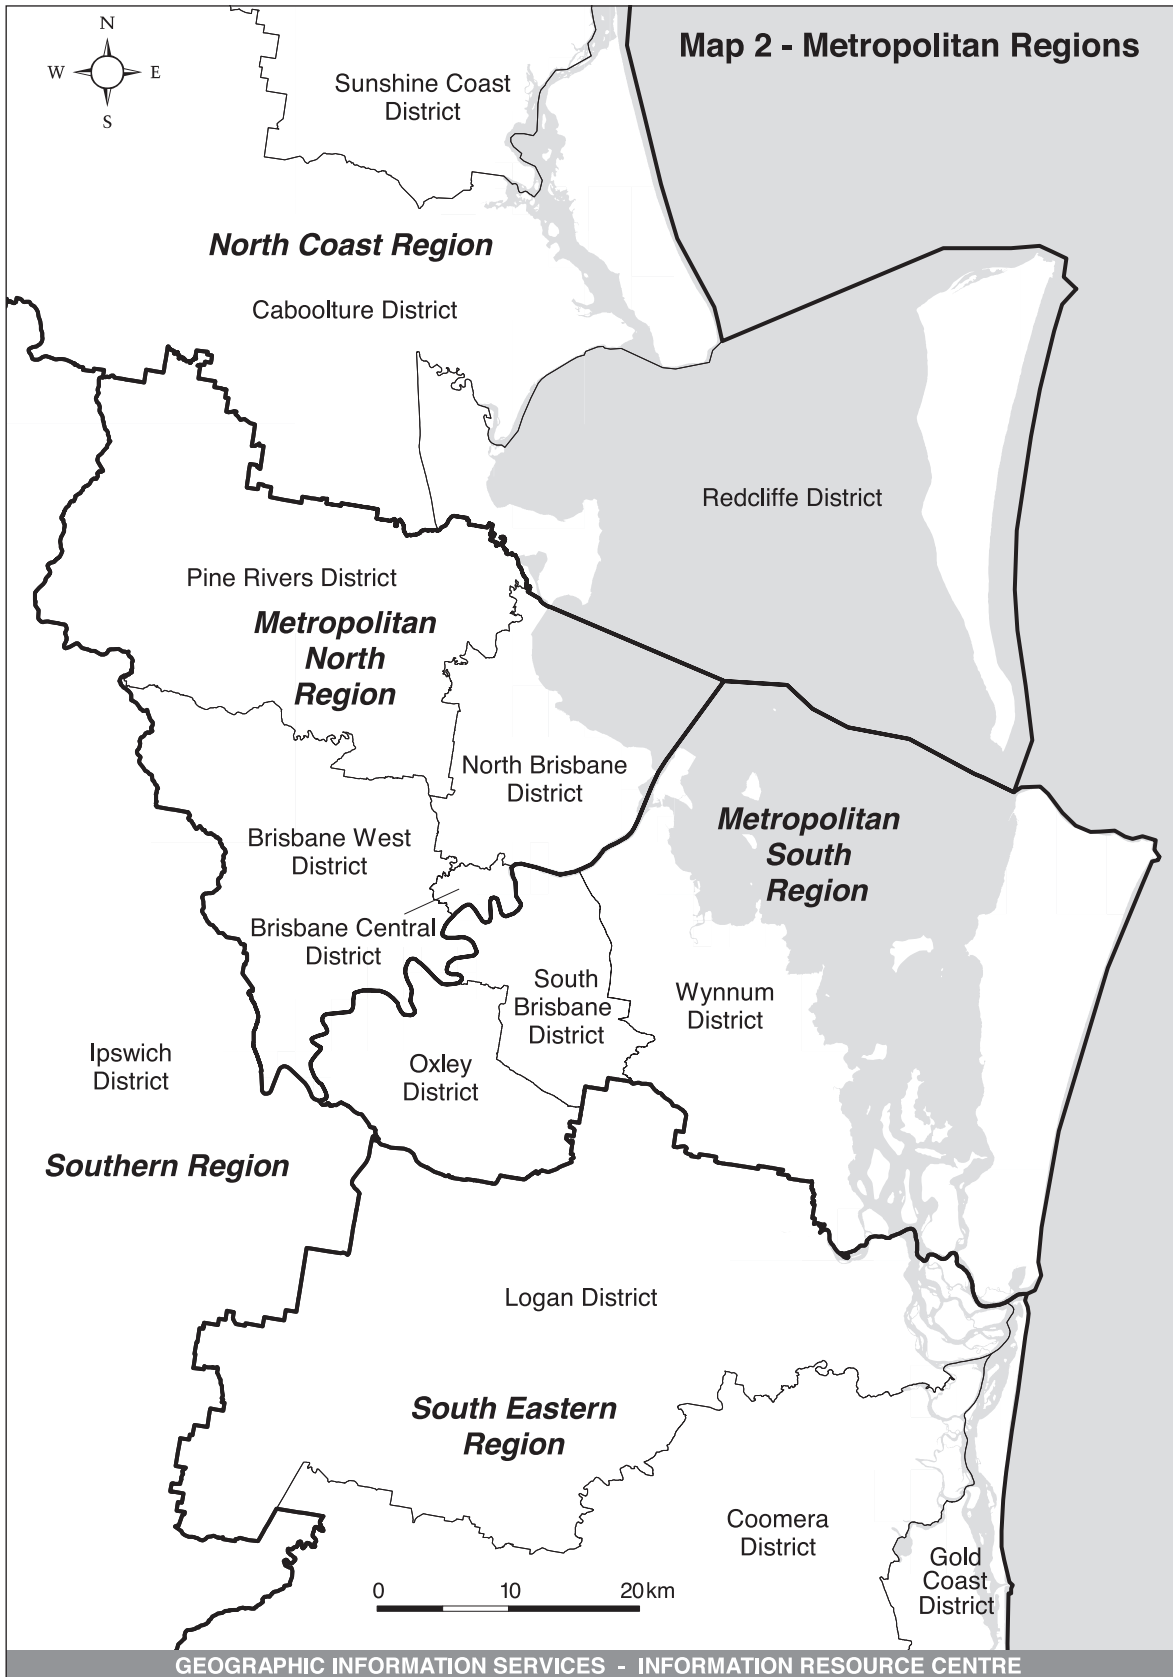

4 The region total for Actual Strength includes employees for Region Functions.

Note: The aggregate of district totals may not equal regional totals [see detailed explanation on page 105].

Police Regions and Districts

Metropolitan Regions and Districts

Explanatory Notes

The interpretation of police crime statistics is not a simple task. Before an appreciation for the value and utility of crime statistics is possible, it is necessary to understand the conventions and bounds of police crime statistics as well as the various external variables which may affect them. These include the procedures used by the Queensland Police Service (QPS) in the compilation and collation of crime statistics, the definitions and rules QPS follows in producing crime statistics, and the social and environmental factors that may have an impact on the statistics.

Once an understanding of the scope of police crime statistics is achieved, the value of the information they provide and its worth as a research and planning tool becomes evident. QPS strives to maintain absolute integrity and accuracy in the production of these statistics and publishes the Annual Statistical Review as its official public record of statistics pertaining to police, crime and related matters. To assist in using the information contained in this publication, a detailed summary of the above-mentioned definitions and conventions is provided over the following pages.

Reporting and Detection Rates

A major environmental factor that impacts on the use of police crime statistics as an indicator of total crime levels in Queensland is the level of reporting by the community.

The rate of crime reporting may vary according to many factors. This includes the perception by members of the community as to whether an offence has actually occurred, and whether the offence is reported by the victim or a community member to the QPS.

According to both Office of the Government Statistician (OGS) and Australian Bureau of Statistics (ABS) Surveys, the most common reason for not reporting crime was that the offence was considered too trivial. The second most common reason was that the victim doubted the police could or would take action.

Another factor which has a major impact on crime statistics is the priorities and activities of the QPS. An expansion of the Drug Squad, for example, may result in an enhanced ability to detect drug offences within Queensland. An increase in the number of drug offences recorded in police crime statistics may, therefore, be directly related to the

effectiveness of the Squad rather than an actual increase in drug offences in Queensland.

In order to gain a more comprehensive picture of the nature and extent of crime, QPS crime statistics should be examined in conjunction with information from other sources such as Victims of Crime surveys and criminological research.

Recording Offences

The crime statistics presented in this Review were derived from the Queensland Police Records and Information Management Exchange (QPRIME, 2007-) database.

After becoming aware of an offence the reporting officer contacts the Information and Communications Technology Command (ICT), by telephone as soon as practicable. A twenty-four hour data entry service exists within ICT to facilitate this process. The offence is recorded, classified and counted by the data entry staff. This process provides the benefits of reducing police officers' administrative workloads as well as providing an accurate and immediate computerised record of crimes.

Crime Statistics Collection

Reference Period

For the purposes of this Annual Statistical Review, the reference period is the financial year, 1 July 2011 to 30 June 2012.

Reference Date

The reference date for reported offences is the date an offence is reported to or detected by police. For cleared offences, the reference date is the date the offence was cleared by police. For offender statistics the reference date is the date an action is commenced.

Data Source

Crime

All Queensland Police Service crime statistics are derived from the data contained in official crime reports.

Since June 2007, official crime reports have been recorded in the Queensland Police Records and Information Management Exchange (QPRIME). Crime reports recorded between December 1994

and June 2007 have been converted from Crime Recording Information System for Police (CRISP) to QPRIME.

Prior to December 1994 crime reports were derived from data entered into the crime statistics database maintained by the Statistics Section of the former Information Management Bureau (and its precursors).

“Cancelled” and “Not substantiated” or “unfounded” reports are excluded from QPS published crime statistics information.

Population

The population data used to calculate the number of victims and offenders by age and sex per 100,000 population was taken from Population by Age and Sex, Australian States and Territories June 2010 (ABS Catalogue No. 3201.0).

All other rate calculations throughout the publication are based on a projection of the Estimated Residential Population as at 30 June 2011 (for 2010/11) and 30 June 2012 (for 2011/12) as provided by the ABS and the Office of Economic and Statistical Research, Queensland.

Rates and Numbers

Methodology

Numbers of offences are simply the number of offences occurring (recorded by police) within a specific area and for a specified period of time. These are presented as simple counts. The problem with using crime numbers to gauge the true level of crime is that areas with larger populations will presumably have higher numbers of crime than areas with smaller populations.

Rates displayed in this publication are always presented per 100,000 persons. Calculation of rates allows direct comparisons of crime to be made across different geographical areas (State, regions and districts) and across time since the size of the population is taken into account in the calculation.

Rates are calculated as:

$$\frac{\text{No. of Reported offences}}{\text{Estimated Residential Population}} \times 100,000$$

Interpreting Rates and Numbers

It is important to note that transient population groups such as tourists are not factored into the estimated population. This would have particular impact on high tourism areas where crime rates would be overestimated.

Caution should be exercised when using either numbers or rates alone to measure crime in specific and different areas. Rates, for example, are sensitive to small populations. Both numbers and rates of reported offences have particular uses and should be presented together to give a clear and balanced picture of the level of crime.

Percentage changes are another type of rate which requires caution when interpreting. Small numbers of offences can result in large percentage changes.

Comparisons of crime rates over different areas should be interpreted with great caution due to the many factors which differ from community to community. The level of crime in any community is affected by the number and composition of its population, with particular reference to age, sex, ethnicity and employment. The climate and geographical features of the community are important as is the economic structure including the local industry and the level and distribution of income. The attitude of the public toward crime can also impact upon local crime levels.

Crime statistics for low volume offence categories tend to fluctuate randomly and dramatically from one year to the next. This can cause difficulties in the identification of trends and patterns in the levels of offences. It is, therefore, important to approach these low volume offence categories with caution when looking at trends and even when making comparisons across geographical areas.

Unreported Crime

QPS crime data can only relate to the offences which have been reported to police. Obviously, there is a large proportion of crime that is never reported. Various surveys, for example, Victims of Crime Surveys and Crime and Safety Surveys, are conducted by the ABS and by QPS to determine the level of unreported crime. The reporting rate can vary dramatically across offence types. For example, approximately 95 per cent of all motor vehicle theft is reported to police whilst only 33 per cent of sexual offences are reported. It is important to keep this in mind when using crime data. Relying on reported offences only can lead to an underestimation of the true rate of victimisation.

Offence Classification

The offence categories used by the QPS for crime statistics are based on the Australian National Classification of Offences (ANCO), prepared by the ABS. ANCO was designed to provide a national

framework for classifying offences for statistical purposes. The Australian Standard Offence Classification (ASOC) has been implemented in some jurisdictions by the National Centre for Crime and Justice Statistics of the ABS, and will eventually supersede ANCO. However, the QPS crime statistics collection will continue to be based on ANCO.

Crime statistics are presented under three broad offence divisions: offences against the person; offences against property; and other offences. These three primary divisions have been developed to facilitate the understanding of crime statistics by grouping similar offence categories together. Following are the offence sub-divisions located within each of these primary categories.

Offences Against the Person

The offence division of offences against the person includes the following offence sub-divisions: homicide (murder), other homicide; assault; sexual offences; robbery; and other offences against the person.

Offences Against Property

The offence division of offences against property includes the following offence sub-divisions: unlawful entry with Intent; arson; other property damage; unlawful use of motor vehicle; other theft (excluding unlawful entry); fraud; and handling stolen goods.

Other Offences

The offence division of other offences includes the following offence sub-divisions: drug offences; prostitution offences; liquor (excluding drunkenness); gaming, racing and betting offences; breach of domestic violence protection orders; trespassing and vagrancy; weapons act offences; good order offences; stock related offences; traffic and related offences; and miscellaneous offences.

Many offence sub-divisions are divided into offence groups and then offence sub-groups. Reported and cleared offence statistics in this publication are presented to a group level in most sections.

Geographical Classification

Queensland crime statistics are compiled to four hierarchical geographical levels. Firstly, statistics are compiled for the State as a whole. Below this, QPS divides the state into eight statistical regions. The next geographical level is that of statistical

districts, of which there are 31 throughout the State. Finally, these districts are divided into 337 statistical divisions. Reported and cleared offence statistics are presented at State, Regional and District levels in this Review.

Counting Methodology

The counting rules used by the QPS in the collection and collation of crime statistics are based on the guidelines published in the National Crime Statistics Manual (ABS) and as amended from time to time by the National Crime Statistics Advisory Group.

The national counting rule is that for each victim within a distinct criminal incident, the Most Serious Offence (MSO) per ANCO subdivision is counted. The national data set does not include 'victimless' offences such as those detailed in the QPS division of other offences. The QPS counting rule for offences of this type is to count each distinct criminal act per criminal incident.

Where the victim based rule applies, the description of a victim varies according to the type of offence. A victim may be an individual person, an organisation, a place/premise, or a motor vehicle (refer to Glossary for definition of victim).

The application of the MSO rule has major implications for the recording of crime statistics. By applying the MSO rule a single criminal incident may result in a number of offences being recorded. For incidents where the same victim is subjected to multiple offences belonging to different subdivisions, one offence, the most serious, is counted within each subdivision. For example, if a person is kidnapped and then raped by two offenders, one kidnapping/abduction/deprivation of liberty and one rape would be counted.

Exceptions to Counting Rules

The offence subdivision of sexual offences (which includes rape and attempted rape and other sexual offences) is an exception to the national counting rule. The counting rule applied by the QPS in respect of this group of offences is that for each victim the MSO per ANCO subdivision is counted on the basis of time and place.

The effect of using this rule is that if a victim is subjected to numerous sexual offences over a long period of time by one offender and these actions come to the attention of police at one point in time, the MSO per separate incident based on time and place is counted. Therefore, it is only possible to identify the number of offences, not victims, of sexual offences. A count of ten sexual offences may mean that there were ten victims

or that one victim was subjected to ten offences over an unspecified time period by one or more offenders.

Fluctuations in the number of reported offences for this offence category must therefore be considered with caution, due to the effects of the current counting rule.

Victims of Crime

The Victims of Crime statistics presented in this Review are compiled on the basis of one victim per counted offence. The statistics do not provide a unique victim count. For example, where the same victim is subjected to multiple offences belonging to different offence sub-divisions within an incident, then in accordance with the MSO rule, that victim would be recorded for each most serious offence per sub-division.

It is important to remember that these statistics are derived using a system whose primary function is to service operational policing. Consequently, there may be slight variations between offence and victim counts.

Statistics relating to victims of offences against property are not included. This is due to the statistical definition of 'victim' used by the QPS, that is, a victim may be an individual person, an organisation, a place or premise, or a motor vehicle (refer to Glossary).

Offences included in the other offences division are also excluded, as these offences are usually deemed to be 'victimless' offences.

There are several offence groups in offences against the person where the victim may be an organisation rather than an individual person. Examples include robbery committed upon a banking institution or business, and extortion committed upon organisations. It should be noted that these offences are not included in the victim count.

Offender Counting

Offender statistics are based on offence counts and do not and can not refer to individuals. The data refers to the number of offences cleared or solved through an action against an offender. As such, offender data does not equate to a unique offender count and nor does it equate to the number of offences cleared. For example, an offender charged with motor vehicle theft, unlawful entry, assault and other theft would be included four times in any offender breakdown by age and sex.

Only persons aged ten years and over are deemed to be offenders. Under Queensland law, children

under ten years of age are not held criminally responsible, although they may be involved in the commission of an offence. Juvenile offenders are those aged between and including ten and sixteen years.

Offenders have not been included if their age and sex is not specified in QPS records. Less than 1% of offenders have been excluded for this reason.

Drink Driving Offences

Examples of significant events affecting the drink driving time series include:

- 04/05/1985 - Legal blood/alcohol limit for persons under 18 years lowered to 0.02%;
- 1986/87 - Reduce Impaired Driving (RID) campaign introduced;
- 01/01/1989 - Random Breath Test (RBT) formally commenced;
- 04/10/1991 - First two Mobile Breath Stations (Booze Buses) introduced.
- 01/07/2012 – Introduction of Drink Driving 0.05 and under 0.10 which replaces Drink Driving 0.05 and under 0.08
- 01/07/2012 – Introduction of Drink Driving 0.10 and under 0.15 which replaces Drink Driving 0.08 and under 0.15

Drug Enforcement Region

Offences detected or under investigation involving covert drug operations or sensitive issues such as sexual child abuse are not geographically classified until after the completion of all inquiries in the interest of strict confidentiality. For this reason, a temporary holding geographical classification, the Drug Enforcement Region, has been created. Offences classified to this area are included only in Queensland offence counts in this Review.

Other property damage - Change in Policy

In December 2001, the Service implemented a change in policy in regard to the reporting of other property damage offences. Prior to this change, the offence of wilful damage was automatically recorded in conjunction with some unlawful entry and unlawful use of motor vehicle offences. As damage to property is an intrinsic part of break and enter offences, the Service altered the policy so that the offence of wilful damage is no longer recorded with these offences.

Offence

For statistical purposes an offence is any act reported to or becoming known by the police, which they consider, prima facie, to be in breach of the criminal law. With the exception of murder, each offence count represents an actual offence, an attempted offence, a conspiracy, or the aiding or abetting of an offence. In the case of murder, these categories are distinguished.

Reported Offences

Reported offences refer to all established offences reported to or becoming known to the police within the relevant reference period.

Not Substantiated

An offence is “not substantiated” or “unfounded” when investigation has established that the alleged offence was not in fact committed. This includes a false report, a mistake in the facts as reported by the informant, or no breach of the law involved in the alleged offence.

Inability to prove an ingredient of an offence does not make an offence “not substantiated” nor does a decision by a complainant not to proceed after the offence has been reported.

Cleared Offences

An offence is deemed to be cleared under, but not restricted to, the following circumstances:

- At least one offender has been arrested or summonsed or issued with a notice to appear, or information has been laid to compel an offender’s appearance before a court;
- Action has been taken against at least one offender under the provisions of the Juvenile Justice Act 1992 (e.g. administration of an official caution, summons or reference to a community conference);
- At least one offender has been dealt with in accordance with Queensland Police Service policy (e.g. informal counselling of children and elderly persons);
- The offender has admitted the offence but there is an obstacle to proceedings (e.g. diplomatic immunity);
- The offender is known and sufficient evidence has been obtained, but the complainant refuses to prosecute;
- The offender is in another jurisdiction and extradition is not desired or not available;
- The offender is serving a sentence and no useful purpose would be served by prosecution;
- The offender has died before proceedings can be commenced;
- The offender has been admitted to a mental institution before charges are laid and release is unlikely;
- The offender is being offered drug diversion for a minor drug offence;
- There is some other bar to prosecution;
- The offender is dealt with by ex-officio indictment;
- The offender is being dealt with by another agency apart from QPS (e.g. Marine Brief of evidence, Family, Youth and Community Care);
- The complainant or essential witness has died and proceedings would be abortive;
- Following a complaint the complainant has requested that police take no further action;

The recovery of stolen or otherwise unlawfully obtained property, e.g. a motor vehicle, does not in itself clear or solve an offence.

Number of Offences Cleared

Cleared offences are presented in this publication in two groups, i.e., those that were both reported and cleared in the reference period, and those that were cleared in the reference period but reported previously.

Percentage Cleared

Percentage Cleared is the percentage of offences that were reported within a specified period that were also cleared within that period.

Offender

An offender is any person who, through the clearance of an offence, is deemed to be responsible for committing that offence.

Action Type

The following definitions apply to the action types presented in the tables appearing on pages 86 and 87, Offenders, Indigenous/Non Indigenous - Queensland by Type of Action by Age:

- **Arrest:** The taking into custody of an offender to compel that person's appearance before a court;
- **Summons:** A direction or command issued by a magistrate or justice to an offender to appear before a court with reference to a matter described therein, at a given time and place;
- **Notice to appear:** A notice issued and personally served by a police officer upon an offender whom he/she reasonably suspects has committed or is committing an offence, to appear before a court, with reference to a matter described therein, at a stated time and place;
- **Warrant:** For the purposes of this application, a warrant is an authority under the hand of a judge or justice to arrest an offender in order that the person may be dealt with according to the law;
- **Caution:** An official caution administered to a child under the provisions of the Juvenile Justice Act, 1992 and includes the cautioning of persons over 65 years of age and intellectually disabled persons for minor criminal offences in accordance with official Service policy. The term does not apply to any informal process where a child is spoken to by an officer where the officer is exercising discretion in relation to the child's particular behaviour or actions;
- **Community Conference:** The referral of a child under the provisions of the Juvenile Justice Act, 1992 to community conference by a police officer before the start of a proceeding for an

offence, or by court after a finding of guilty is made against a child for the offence;

- **Other:** The offender is known and sufficient evidence has been obtained but there is a bar to prosecution or other official process (see also definition of Cleared offences on the previous page).

Victim

The description of a victim varies according to offence type:

- for homicide, assault, sexual offences and other offences against the person subdivisions, the victim is an individual person;
- for robbery, extortion, arson, other property damage, stealing (excluding motor vehicles), and fraud, the victim may be either an individual person or an organisation;
- for motor vehicle theft, the victim is the motor vehicle;
- for offences of unlawful entry, the victim is the place/premise as defined on the basis of occupation/ownership.

Crime Location

The crime location is the initial site where a criminal incident occurred, classified by the primary function of that site where the site has more than one function.

Indigenous Identification

In January 2003 it became mandatory for Queensland police officers to ask all offenders the question: Are you of Aboriginal or Torres Strait Islander origin? It is the choice of the person being asked this question to identify their origins as either of the following four: Not Aboriginal or Torres Strait Islander, Identifies as Aboriginal, Identifies as Torres Strait Islander, Identifies as Aboriginal and Torres Strait Islander. If identification has not been made, a reason is recorded within the occurrence.

Since the implementation of QPRIME in June 2007, the indigenous status indicator has not been captured in 6% of cases for the 2011/12 financial year. For these instances, the indigenous indicator has been applied by extracting the indicator from previous identifications. Instances where the indicator was not captured using this method have not been included in the current publication. This was the case in approximately 3% of cases for the period under review.
